One really cool hit.

Between 21:00 & 22:00 local I. RXed one packet from N8QLT.
The new Table that Andy added to UI-Path (so far) really helps with
propagation study.

I'm getting a weak VK (147.585 MHz) packet station from time to time.
Nothing decoded yet, but could conditions in North East be building with
the 90+ degree weather we are expecting tomorrow? Dunno, but I'm on
147.585 and casting my BEACONet. :o)

Heard WD4RBX on 21.128 here in EN82 (northwest of Detroit) today at 14:28.
Also heard KC5DUI today at 16:08, Eastern Time.

Hi all
Funky DX today. TE was weak and short. I heard K9ER (one packet) @ 20:00
local and that's it. My reports are for beacons received 1 hour at a time.
UI-Path now records beacons received during the hour (on a 24 HR table) so my
reports are a bit different. UI-path will tell me how many beacons I RX
during the hour for 24 hours. I reckon that I am Bata testing this addition
to UI-Path and so far I really like it.

You know I had that one this afternoon, and it appeared to be one orbit
off, showing the previous one. Thats why i asked for heavens-above. I just
checked, and it appears right now though. Must be the java flu...grin
Got a few stations showing up on the screen, cumulative for the day. I'm
gonna take a snapshot of it and forward it to Ev when the last pass of the
nite is over (bout a hour).

I sent this yesterday, but it never seemed to make it to the list...

Well, I wasn't the best neighbor since I set up our station on Friday and
just shut it down this morning. It will be easier if we do this during the
week, when I'm here and can walk down to the club shack!

Anyway, here's a snapshot of the stations heard. We received 137 packets
from 35 unique stations. We did not apparently hear our station being
digipeated. One station was in my logs but not on the station list
(WA6LIE), so I just entered the callsign into the list manually. I've
sorted the list by callsign, so you can find your station more easily if
it's in the list. (BTW - what's the '+' in the first column mean?) (Ev - I
have my original log as well as one's I've edited to reduce the data to
just the interesting entries. Which would you like?)

2001-June-18 08:51 36 stations

Hi Rich,

Using UI-Path32 V3.5 and time in CDT, had one plot on you during the 1100
timeframe, TWO during 1700 and one during 1800. Wasn't around the rig then
so the new UI-Path really helps out. Tried a couple pings during the
evening but guess propagation had already switched. You were the FIRST and
ONLY plots I've seen in about a week!! Keep pluggin away.

Bob - KC5DUI - EM26WE

Interesting evening on ISS but only WS5R with VK0EB2-15 indicating propnet
activity. N6CO was consistent enough to where KEP set #110 for ISS was
entered in the computer! Jerry, in Paradise is always there--W6JRY as is
KF6HJO. After a chat with another Jerry, K5OE, my problem might be
incompatibility between the Heathkit 2036 and the Kenwood on the bird!
With only 8 watts out to a J-pole, I suspect higher power is mandatory.
    If anyone prints K7RR, please let me know as this problem is WEIRD!

Hi Kevin,
I find it interesting that you got such good reception of other
stations, though it doesn't look like the ISS digipeated you. I'd have
thought that there wouldn't be that many stations contending for ISS'
attention in your area of the continent...so your 16-32 watts to an omni
should have been heard one or two times. Fascinating.

It appears that you are certainly within "one margin of fade" of having
success, as N7OFW shows a similar setup, but with a "gain" vertical (but
similar power and antenna height). The interesting thing about that is
that gain verticals tend to compress their pattern to the horizon at the
expense of high-angle stuff.

It's good to have you operating, by the way. You will provide one of
the best possible opportunities for establishing a DX record via ISS.
:o)

Thanks for sharing your data!
Ev, W2EV

UI-View will plot only if it receives lat/lon or [GR##ID] information.
Maybe WA6LIE didn't have any in their transmit frame?

> (BTW - what's the '+' in the first column mean?)

It means that I have turned "UI-View Tags" ON...allowing some greater
functionality by other UI-View equipped stations. BTW...it's a good
thing to do, if you haven't already.

> (Ev - I have my original log as well as one's I've edited to
> reduce the data to just the interesting entries. Which would
> you like?)

I'd love a copy of your complete log. I will try to run a quick
analysis of what it contains (hits and misses) to share with you and the
group. I have a half dozen or so that I'm wading through right now.

Thanks for hanging in there, Tony!

Ev, W2EV

Hi Bob

This is what I got from you.12:00 @ 1 13:00 @ 1 and 18:00 @ 5 hits. (time is
local)

I ran UI-Path during ISS passes yesterday to see how it will work. Look for
the station with the most hits and E-mail him for ISS help ;-) I think that
converting the time to UTC before posting might be a good Idea. What you
think? Andy told me that he added the copy feature. Just highlight what you
want and it will be put on the clop board. Back to work today so I got to run.

Rich

Hi Rich,

Will convert my times to UTC before posting as it does make it easier to
compare plots. Was the first time I'd used the new UI-Path and was
impressed!

I'll be off the air today - one more time we have thunderstorms forecast for
today and tomorrow. We don't always get them but when we do .... Had

some real nice storms last Thursday evening and sure was glad I'd pulled the
plug - if I could just "bottle" the lightning I'd be able to save money on
the electric bill (still luckier that California).

Take care,

Bob - KC5DUI - EM26WE

Dan,
That is the uplink freq. to ISS. To listen to the downlink, tune to 145.800
Mhz. I find it useful to use another radio to listen to both the up and

downlinks. Helps to find the space between the other users!

To listen for ISS digipeated stations, tune 144.800.
To listen for people trying to get into the ISS, tune 144.990 (this is
the uplink frequency).

Well, I wasn't the best neighbor since I set up our station on Friday and
just shut it down this morning. It will be easier if we do this during the
week, when I'm here and can walk down to the club shack!

Anyway, here's a snapshot of the stations heard. We received 137 packets
from 35 unique stations. We did not apparently hear our station being
digipeated. One station was in my logs but not on the station list
(WA6LIE), so I just entered the callsign into the list manually. I've
sorted the list by callsign, so you can find your station more easily if
it's in the list. (BTW - what's the '+' in the first column mean?) (Ev - I
have my original log as well as one's I've edited to reduce the data to

just the interesting entries. Which would you like?)

2001-June-18 08:51 36 stations

I have a Kenwood THD7a/g and tried it out in our front yard. I was surprised
to see two stations. One pass., I copied N2BTJ and another pass I copied
K5OE. Has anyone had any luck with transmitting using a THD7a/g?

73' Bob / KC0EFC

Rendered body type: text/plain

Hi all,
Attached is a snapshot of the stations heard from my location in Cupertino, Ca. over the last few days.I was letting it run in the listen only mode while I was not in attendance and ISS is not overhead, to reduce the un-necessary traffic on the frequency as requested by AMSAT org. It runs continuously from June 14th to the 20th.
Longest heard is W0IBM, 1608.8 Mi. Wish I could do that SIMPLEX!
My station is aYaesu FT847, into an 8 element beam. I use STSplus to plot the ISS on a 2nd compter.
Wayne,KE6AJE

Kenwood can certainly participate on BEACONet(ISS), but that transceiver
cannot be programmed with the BEACONet configuration code. Kenwood
decided to not implement a feature called "AltNET support". As a
result, simply place CQ in your to-field and play. You won't be able to
communicate any BEACONet specific information of use...but at least you
get to get digipeated via ISS. :o)

I don't own a THD7 or 700, so I'll leave the specific stuff to someone
who does (I remember there being at least one subscribed to this list).

Ev, W2EV

This was the last pass of the ISS.
I took out my propnet config code and it seems to have digipeted me this
time.
I will put it back in on next pass and see if it still works.
I have gone to using my Arrow handheld 3 ele beam instead of the ground
plane
ant I was using.
Keep a lookout for me so I know things are working right.
Nobody else in area does packet so I am kind of on my own getting this
setup.

Hi Ramon,

Have been on BEACONet 28.128 all day (22 June) without a nibble. I'll
switch over to BEACONet^31 tomorrow (Saturday) morning and see how things
go. Are you still using 28.131 with a 1500Hz tone? Hope to see you on the
map.

Bob - KC5DUI - EM26WE

TNX for the report. I fired up my beacon with the hope that I solved my radio
problem. I will shut it down again tonight before I go to bed because of the
threat of thunder storms. The only station heard by me was W2EV.

Ramon and Rich,

Since 28.128 was SO quiet I switched over to BEACONet^31 about 0200Z (23 June) and will try to stay there for the weekend. Looks like Rich has the thunderstorms we had on Thursday. Hopefully, there'll be a slew of folks on BEACONet^31 tomorrow and Sunday.

339. [propnet] KW TM-D700A info!

From: "Wayne Colliander" <wcolliander@earthlink.net>
Date: Fri, 22 Jun 2001 20:34:15 -0700
To: "TAPR APRS PropNet Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-20048-2001.06.22-22.55.43--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I have a Kenwood TM-D700A in my truck. I remember someone a few days ago asking about how to set up the radio for beaconet. I found a way to make it send the Beaconet configuration code with each transmission.
Do this:
Open Menu, APRS, 3-9 (Status Text). You may have something entered in say #1, but there are several numbered locations here to add a new message, (the config code). Just move to an unused #, such as 2, and type in the configuration code. Don't forget to set this message "active" by pressing the "USE" button above the main tuning knob before exiting the menu mode. So far I have tested this in my driveway only. IT WORKS. I'll try this station on the next pass of ISS tonight.

Any one else with experience or comments on this would be appreciated at this end too!
Wayne, KE6AJE

Hi Wayne,
I think that problem with the Kenwood radio is that it is incapable of displaying frames with BEACONet configuration codes (they are unable to display Altnet-based position frames). I'd be interested in the results of your test to verify.

Very cool, Wayne! It looks like there are still a couple of
BEACONet-ers playing on the ISS -- a good thing. :o)

Folks, it would be easier for us to identify each other if we selected
the "UI-View Tag" option on our transmission frames. I noticed a few on
Wayne's snapshot...again, a good thing.

Keep up the good work, Wayne...I'll attempt to join-in on BEACONet(ISS)
tonight (I'm in the process of fixing some water damage to the ground
floor of my house, and will probably need a bit of a break by evening).
Maybe we can extend the DX. :o)

I recently discovered that my FT-920 had the Antenna Tuner turned "on".
When so, I get high-swr for some reason and (of course) my rig
auto-reduces RF output. In this case, I've been operating at 2-watts
for the past two weeks, wondering why no one heard me.

I discovered it last night, switched off the tuner, and bingo! a
report. I feel so stooooooooopid. :o) I am endebted to folks who
continue to post "heard reports", even if it's the same old stations
that are heard. It helps!

Kevin OConnell/KL0RG wrote:
>
> This was the last pass of the ISS.
> I took out my propnet config code and it seems to have digipeted me this
> time.
> I will put it back in on next pass and see if it still works.

The Config Code has no bearing on being digipeated...it'll go through if

the ISS hears you through the hundreds of other folks attempting to get
through. Keep trying. :o)

By the way...I noticed your transmit frame:
15:40:48T KL0RG>CQ,NOCALL Port=1 <UI C Len=53>:
=5520.50N/13142.82W-[CO45DI] kl0rg@arrl.net {UIV32N}

You can shorten your transmit-frame size (and increase your chances of
being digipeated because you can "squeak between other signals more
quickly" by simply removing your Lat/Lon entry (leave them blank). Your
transmission will look like this:

15:40:48T KL0RG>CQ,NOCALL Port=1 <UI C Len=53>:
[CO45DI] kl0rg@arrl.net {UIV32N}

and still plot on any software being used. FYI.

Also...visit http://go.to/BEACONet | Configuration | Configuration Code
and have the java applett calculate it for you. Then include it in
place of CQ. Believe it or not, by including your Config Code won't
increase your frame size. AX.25 will consume 7-characters, even if you
use only 2 of them.

If you haven't already...please register your copy of UI-View and then
download the "registered" version, called UI-View(32). Once there, you
can use the plug-ins, including the one that allows Rich to get a better
handle on just when the bands were open. Registration is c-h-e-a-p and
the benefits are h-u-g-e.

Thanks for sharing your data, Rich! I'll be downloading the plug-in
later tonight.

Careful of your terminology. Kenwood did implement the ALTNET system
properly and exactly the way it was designed and implemented. ALTNETS are
exclusive by definition. THey will only copy other stations using exactly
the same ALTENET designator.

Beacon net does not use ALTNET protocol nor the standard APRS to-calls, so
that is why it cannot be seen on other APRS stations or any of the
kenwoods (unless the TOCALL begins with "CQ" or one of the other APRS
standard formats... then it will work fine...

Just thought I would clarify.
(before leaving on a 1 week trip without email)

Hi Ev and all
Andy did a really good job modifying his UI-Path plug in. FYI he made the
mods just for us BEACOneters. Also Bob has been using it and we decided to
covert the time from local to UTC. WE are playing the same game and UTC puts
us in the same inning. I might Push my luck and ask Andy I he could add an
option for UTC. Another thing He also added the "copy to the clop board" Just
high light what you want and it will be put on the clip board as plain text.

Point well taken. The bottom line is: one can use Kenwoods as BEACONet
sources, but not BEACONet monitors. Maybe future versions of their ROM
will include the ability to turn "Filters-Off" (like APRSdos does).

Interestingly...this would make Kenwoods an excellent choice for
stand-alone Client-Hub stations -- stations with bs0pah-# in the config
code -- those capable of launching packetis into the BEACONet network,
but not digipeat or display them...like in VHF Contest Rovers. I've got
to give this some additional thought.

I envy your week away from eMail. There's something to be said for
that. :o)

Free Pet Tag Fundraising Program!

ORGANIZATIONS THAT HELP ANIMALS FIND HOMES!

SHELTERS,

RESCUE GROUPS,

please read:

Receive up to $10 for each animal
you adopt out!

To receive detailed information immediately regarding this free program
please

click the SEND INFO NOW!

Please forward this email to any organization that
finds loving homes for animals in need!

Would you like information on a pet tag fundraising program for your organization.
Your organization can receive up to $10.00 for each animal that you place in
a loving home for each year the animals life! This additional revenue generated
for your organization requires no additional work or selling of any sort.
This program works in conjunction with the pet tags that your organization already
distributes. If you do not distribute a pet tag with each animal that you place
in a home then you can still qualify by joining the program. This is a 100%
free program to any organization that helps animals find loving homes

Tip of the day:

If you use more than 1 email address to mail to the list, you will have to
subscribe for each email address you want to use when mailing to the group.
(For example, I use ramon@ieee.org and ramon.kolb@usa.net.) In the Status
field on the signup page you can specify that you do NOT want to receive
emails for this account. That should save you from the Grim Reaper when you
send email from a different address than the one you read your messages
on...

HI all Bob. Your not alone! I've been on since 1500 UTC today
and Ramon is the only catch. I went down to the low end of the band and
worked five different VK station and three SA stations all CW. I just can
not figure out what might be going wrong with PSK 31! Cliff K7RR

Hi Ramon!
Why thank you for the welcome. I enjoyed the trip, but the layover at
the RBX International On-the-Air Port was a bit much as my 1200 baud
itinerary was converted to PSK31 prior to takeoff. :o) I'm afraid that
I have yet to see successful BEACONet^31 operation, so I've anchored on
BEACONet for the time being. I was probably digipeated by Rich (which
isn't necessarily a bad thing given the present levels of overall
channel loading).

Interestingly, no icons on 10-meter BEACONet (.128) yesterday...and a
relatively quiet band, too.

I've got to spend some time trying to get ^31 working. There are
obvious weak signal advantages.

Hi All

Looks like my station has a nick name LOL

I have been playing with the Idea of running both BEACOnet and BEACOnet^31 at
the same time. If the DIGI from BEACOnet to BEACOnet^31 is to confusing Ill
be glad to turn it off. I am in the process of putting up another vertical
for ten meters and hope to have it up shortly.

Also at about 6 AM we had a short power failure and I lost my UI-Path info
for last night.

```

The problem with digipeating is, that I have no way to distinguish
digi'd stations from directly heard stations.

About UI-Path, could you give me the direct URL path to where I can get
this, so I can take a look at the "enhanced" version? Does it work with
UI-View 16bits?

Thanks,

--Ramon

Hi Rich,

Didn't check my rig when I got up this AM so may have missed an opening.
When I came into the room about 0935CDT I noticed a trace on PSK31Srv that
was outside the 100Hz range I had specified to scan. Sat and watched the
screen and was able to click and get a partial call + GR##ID on you at about
1439Z. Haven't seen anything since but will monitor for a bit longer.

Hi Ramon, all. I'm on right now 1550Z. I measure everything again, this
time with 40 watts out to a 6 db verticlal. A fellow across town prints
just fine. There is also a 20 watt signal on 28128 30 watts out, AX25.

Hi folks,

I will be travelling (to Europe for work) for most of next week and maybe
the beginning of the week after. I think it's wise to switch off the station
as I have no way to control it (except for teaching my wive the on/off
button :-)) while I am abroad. Therefore, my schedule will be as follows:

W1/PA3EUG off the air: starting sometime during TUESDAY JUNE 26, 2001
W1/PA3EUG back on the air: MONDAY JULY 2 in the afternoon, or, depending on
final travel schedule, Wednesday/Thursday that week.

Of course, when I come back, I hope everybody switched to BEACONET^31 and
I'll see stations from all over the world at my screen :-) (Ok, ok, I
know... keep on dreaming :-))

73s

>spot created by an enormous X-ray nova outburst. Another mysterious object
>has been found as well: one of the "coolest" sources of the central region
>appears to be a luminous white dwarf with an extremely soft energy
>spectrum and the shortest X-ray pulsation period seen to date.
>
>The Andromeda Galaxy, the closest spiral galaxy to our own (2.6 million
>light years away), is a unique object for study by X-ray astronomy. M31 is
>in many respects similar to the Milky Way and has even been called its
>"twin sister." The Andromeda Galaxy hosts hundreds of X-ray sources, which
>are observed at a nearly uniform distance, and owing to the favourable
>orientation of the M31 they are less obscured by interstellar gas and dust
>than those in the Galaxy.
>
>GAMMA-RAY BURST REVEALS SECRETS OF HOST GALAXY
>
>Five years ago, astronomers knew almost nothing about gamma-ray bursts.
>Now, a team of observers using the National Science Foundation's Very
>Large Array (VLA) radio telescope has used a gamma-ray burst as a powerful
>tool to unveil the nature of the galaxy in which it occurred, more than 7
>billion light-years away. It is the first time that astronomers have seen
>the host galaxy of a gamma-ray burst with a radio telescope. Previously,
>gamma-ray-burst host galaxies have been seen with optical telescopes, but
>detecting this galaxy with a radio telescope has given us new clues about
>the nature of the galaxy itself -- clues we couldn't have obtained any
>other way. For example, on the basis of optical-telescope studies,
>astronomers estimated that new stars are forming in the host galaxy at the
>rate of about the mass equivalent of 20 suns per year. However, data from
>the radio observations show that the actual star-formation rate is 25
>times greater -- the mass equivalent of 500 suns per year.
>
>RADIO-LOUD QUASARS MAY BE BLAZARS

>
>Researchers at The University of Texas at Austin have found new evidence
>to suggest that all radio-loud quasars may be blazars -- and the
>differences between them may be related to the angle from which they are
>viewed. Quasars (quasi-stellar objects) are found in distant reaches of
>the Universe and blazars are much brighter types of quasars. After a
>spectroscopic survey of 62 quasars using the Harlan J. Smith Telescope at
>UT-Austin's McDonald Observatory, astronomers say that there is new
>ultraviolet evidence suggesting that radio-loud quasars are simply blazars
>seen from the side.
>
>XMM-NEWTON EXAMINES IC443
>
>The supernova-remnant shell IC443 is situated in our Galaxy, some 5000
>light-years away, in the opposite direction from the Galactic Centre.
>It was long thought to emit solely thermal radiation. But in 1997
>the Japanese ASCA and German ROSAT observatories discovered hard-X-ray
>emission of a non-thermal nature, a first hint of the presence of a
>pulsar.
>
>Soon afterwards another satellite, BeppoSAX, detected distinct compact
>X-ray sources in IC433, and the Very Large Array (VLA) radio telescope
>in New Mexico (United States) also registered radio-wavelength signals
>from the same area. Finally, in the gamma-ray energy band, the EGRET
>instrument aboard the Compton-GRO spacecraft also pinpointed a source
>which had all the characteristics of a neutron star.
>
>In autumn 2000, both ESA's XMM-Newton and NASA's Chandra X-ray
>observatories focused on IC443. Last December, data from the American
>mission allowed three young high-school students working with their
>teacher, a Chandra guest-observer, proudly to announce that they had
>located a young and rapidly rotating neutron star, in other words a
>pulsar. Their conclusion was supported by the VLA radio data. A
>European team has now gone one step further, providing not only a
>detailed morphology of the cloud of gas and dust, or nebula, surrounding
>the pulsar, but also identifying it as the same source (numbered 3EG
>J0617+2238) observed by EGRET in 1999. The elliptical, 'cometary' shape,
>which indicates that the pulsar is moving outwards from the centre of the
>supernova remnant, is also evident. The new data on IC443 obtained with
>XMM-Newton may help us understand why there are so few supernova remnants
>with pulsars. Today we know around 250 SNRs, and only about 15 of them
>contain pulsars, a surprisingly small fraction.
>
>SPACECRAFT TO LOOK FOR BIG BANG
>
>A spacecraft that looks a bit like a foil-covered umbrella aims to take
>the ``ultimate baby picture'' of remnants of the theoretical Big Bang that
>gave birth to the Universe. NASA's $145 million MAP craft -- short for
>Microwave Anisotropy Probe -- is due for launch from Cape Canaveral on
>June 30. The probe will swing past the Moon on its way to an orbit around
>a point 1 million miles from Earth in the direction away from the Sun.
> >From that vantage point, MAP will take note of the tiniest fluctuations in
>temperature, down to one-millionth of a degree Fahrenheit, searching for
>what remains of the explosion that many astronomers believe started the
>Universe some 14 billion years ago.
>
>CASSINI MISSION TO BE REDESIGNED
>
>Scientists will redesign the Cassini mission as the spacecraft hurtles
>toward Saturn to avoid losing data from a probe it will drop onto the
>planet's moon Titan in 2005. Mission planners will delay releasing the
>Huygens probe from Cassini until February 2005, during the spacecraft's
>third orbit of Saturn. The probe was originally to have been released in
>November 2004 during Cassini's first orbit around the ringed planet.
>Cassini will also pass farther -- 40,300 miles -- from Titan during
>Huygens' less-than-three-hour mission. Originally, Cassini was scheduled
>to fly within 750 miles of Titan while Huygens parachuted down through
>Titan's nitrogen atmosphere.
>
>The change, which adds a single fly-by to the 44 passes Cassini will make
>of Titan, is required to compensate for an error in the design of the
>probe's communications equipment. Officials with the European Space
>Agency, which contributed Huygens to the mission, discovered the error
>last year.
>
>The probe's design failed to account for the Doppler effect, which will
>change the frequency of Huygen's transmissions to Cassini as the probe
>drops through Titan's atmosphere. The phenomenon, familiar to anyone who
>has heard an ambulance siren change in pitch as it rushes past, would have

>been more pronounced because Cassini was expected to be bearing down on
>Titan at more than 12,000 mph as Huygens transmitted its data. If left
>uncorrected, the frequency change would have left Cassini unable to
>receive most of the science data from Huygens.
>

So far have had only WD4RBX today - one plot in the 1400Z hour, another plot
during 1500Z, one during 1600Z and FOUR in the 1900Z hour. Busiest time
I've had in almost two weeks!!

Bob - KC5DUI - EM26WE

Hi Bob and all. Here is my report for today (copy from UI-Path) so far. Note
W2EV and our South American friends are AX.25 the rest are PSK31 time is
Local. I am thinking about setting my computer clock + 4 hours so my postings
will be UTC.

Hi all

I hope that this format will travel the news group better then the last try.
Time is local. W2EV, N8QLT and our SM friends are AX25. If you want to see
how many total plots I recieved from you it is at the bottem.
Rich WD4RBX EM84NM This is HY not ISS ;-))

+TD4RBX*    Grid Squ.        [EM84NM]         1328.5    232   Jun 24 17:47
+WD4R□*     Grid Squ.        [EM84NM]         1328.5    232   Jun 24 17:32
 PAL*       Grid Squ.        [FN42KI]           30.7    117   Jun 24 17:21
 PA3G*      Grid Squ.        [FN42KI]           30.7    117   Jun 24 16:51
```

It looks like a lot, but it's actually only 4 stations, including me. The grid square numbers seem to come in clean most of the time, but many of the calls are a bit mixed up. I do not have crc checking turned on for rx, but I am adding it to my signal on tx.

Hi John,

Was interesting to note that I had two plots on you during the 2100Z hour and could see that I was reaching you at the same time.

Had WD4RBX as follows:
1500Z - 1 1600Z - 1 1900Z - 4
2000Z - 2 2100Z - 3 2200Z - 7
2300Z - 9 0000Z (25 June) - 6

Guess I'll keep on with BEACONet^31 for another day or so, is anyone else is going to stay active?

Bob - KC5DUI - EM26WE

Joe - next pass was even better - but looking through the captured file, mine was still only BeacoNet code seen. May blast a http: for BeacoNet site on next good pass and drum up some interest. Even had time to qsl Air Force Academy and they replied. Also noted I left the direction off the end of code (unproto)

Actually that was me. The XYL is a captain here at Zoomie-U. I run an FT-847 (controlled by Station) to an M2EB-144 mounted on a 10ft piece of

water pipe sticking in one of the corner posts for my chainlink fence.

I heard Susan Helms on a couple of the earlier passes. She's quite good at working the pileups. I got a chuckle out of her "1A - Battery" IDs on her QSOs yesterday and today.

380. [propnet] Kantronics KPC-2 Beacon Every 30 Command Failure

From: "Mark Schmidt" <roadwarrior@techie.com>
Date: Mon, 25 Jun 2001 08:20:00 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-20370-2001.06.25-07.41.00--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Actually, it accepts that command, but does not obey it. I can Beacon after and it talks, I do Beacon Every 1 and sure enough it transmits every 10 seconds. Perhaps there's a maximum value a KPC-2 accepts for a B E command, though nothing is stated to that effect in the manual.

Clues? Suggestions? Darts?

BTW, this setup is intended for the 2M part of my BEACONet station. I've purchased some AEA (now Timewave) PK-232 units for 6M (trying to find someone to program the frequency into an old Midland lo-band rig) and 1.25M (awaiting crystal from ICM). Any pointers for the PK-232 units welcomed. I'm packet dumb, never having any care about it until the article in May 2001 QST.

Hi Mike,
I'll take a stab at it...
The assumption is that you've done a "hard reset" of the TNC, of
course. Barring that, does the unit obey a B E 2 (20-second beacons)?
If so, then simply increase the time until you get to a "maximum".

Next...are you trying to use the TNC's as a "Level-I" station
(TNC-only)? UI-View should be able to control it otherwise. Is the
KPC-2 a KISS-capable TNC?

Ev, W2EV

from EN74HD, just in time for the tropo I heard this morning on the way
to work. I'll try to make it level 2 in the next few days. Right now
it's at my house that's about 40-50 feet lower than here at work (which
is at the highest point in the lower peninsula of MI), but I have the
station managers permission to put these up here at work on the roof
above my office, which will be 1710 AMSL. Now to convince the Chief
Engineer to approve it...

Rendered body type: text/plain

'Hard Reset', yes. It does do shorter B E commands - I have had it
running at B E 18 (that's 18 10 seconds intervals) so far, so will try
to bump it a little more.

Yes, currently it's only a 'Level I' setup - TNC only. I do now have the
UI-View software copied to a CD so I can try that tonight - before I

couldn't get it to that machine because it wasn't on the net and UI-View
is too big for a floppy ;-(

No, I can find no reference to KISS in the manual for this KPC-2.

The good news is that the Station Manager and the Chief Engineer will
let me run this stuff at work, so that'll put my HAAT up to 350' AMSL,
and cover me for power outages (we have a 350KW generator out back), so
I'll be pretty much 24x7x365.

So all'ya'all listen for KB8GC on 147.585 - it's squacking every cupla
minutes from EN74HD.

Hi Mike,
I'll take a stab at it...
The assumption is that you've done a "hard reset" of the TNC, of
course. Barring that, does the unit obey a B E 2 (20-second beacons)?
If so, then simply increase the time until you get to a "maximum".

Next...are you trying to use the TNC's as a "Level-I" station
(TNC-only)? UI-View should be able to control it otherwise. Is the
KPC-2 a KISS-capable TNC?

Rendered body type: text/plain

Now that I have the Kantronics KPC-2 running on 147.585, it's on to the
1.25M project. I bought a barenaked AEA PK-232 unit to use there, but

have no manual, so no info on pinouts for the plugs at the back. I
already gave Timewave money for a plugset, but am trying to save $30
they want for the manual.

BTW, folks, here's what should be set up here (if I can ever find
someone around here to program the 53.53 freq into the old 70w Midland
;-(by sometime next month. The 223mHz should be all set by sometime the
second week of July:

VK1FB6-15
for 147.585 - UIsoftware - 50w - 3db - 350 HAAT - ant omni - this one
is already on the air in 'Level I' mode only.

VS1DB6-15
for 223.780 - UIsoftware - 10w - 3db - 350 HAAT - ant omni

VB1GB6-15
for 053.53 - UIsoftware - 70w - 3db - 350 HAAT - ant omni

Say, anyone going to try Ms on 147.585 tonight?

Hi Mark,
It'll be great to have your signal on the air! Especially in the Great
Lakes area...we can have some spectacular tropo in the late summer (so
you're just in time!) :o)

Being relatively new to the list, I wanted to encourage you to excersize
patience ... BEACONet is alot like fishing ... you can go a looooong
time with relatively nothing and then be rewarded with a big catch!
10-meters sees more hard-success on a day-to-day basis than does 6- and
2-meters...don't dispair.

Marc,
Be sure to take a moment and "register" your station on the
"METEORegistry" web site. There is a "meteor shower" called "June '01"
which is intended simply to "register" standard mode stations -- in an
attempt to let people know where the pockets of activity may be.

Due to unexpected thunderstorm activity starting this afternoon (had to call
my wife to shut down the rig and disconnect the antenna) and forecast
through the weekend (hopefully a mistake) I'm off the air until further
notice. Maybe the weathermen will get their act together and have this
lightning move off and just leave us the needed rain!

Hi Ev. Let's hope that Ramon has a better log that I do but my memory is
that it was on the 18th or 19th of June. The times were: starting at 1850
UTC and all afternoon (for me) until past 2200. Best signals were
between 2000 and 2100 UTC. Depending on Ramons feelings, I'd like to go
back to 28131 PSK. AX25 on 28128 has been less than successful for me.
I've been beaconing for four days at one minute intervals--no return
reports, but the LU's have been wiping the frequency. At 1600 UTC, the
VK's are all over the lower part of the band, so I feel it is a AX25 tone
or tuning configuration problem---not a signal strength one. Cliff K7RR

IT looks to me like one of the capsule SSTV freq is the 2m beaconet freq. So you might have some long
range here. 90,000 ft antennas do work well. ;-) I'm hoping my home
BEACONet station (24x7) will pick it up. ;-)

http://users.crosspaths.net/~wallio/gpsl2001.html

I will have SSTV and a simplex repeater on 6m (52.540), maybe next time on the beaconet freq?

John, while I do have a business phone and I think I probably listed it on
the form, I was not planning on using the program in conjunction with my day
job and so rather than list my employer, I put my station callsign in the
"company" field. It seems that somewhere I had also checked/selected
hobbyist use or something of the sort, so my call would indeed be the
appropriate "organizational affiliation." They seemed to have no problem
with this as the CD appeared in my mailbox about 2 days later. I would
suggest that you simply list a home phone and a callsign and see what

happens.

Bob - Should not have written it up!   As soon as I did, it was like
someone pulled the plug and haven't heard a peep since. Also didn't
have capture on and did an unintensional exit from program so you went
up in smoke. Your signal was very strong on my moble (no tnc or meter
on Delta) and was pegging the meter on base. Anything from me on your
end?

Rendered body type: text/plain

I don't know why, and I don't CARE why! But I just got another one!

W4DLO-12>S5QV2Y,KA4YMY-8,KS4XQ-3,WA5IHL-11*:'lR5l#Cu/]"6U}
W4DLO-12>S5QV2Y,KA4YMY-8,KS4XQ-3,WA5IHL-11*:'lR5l#Cu/]"6U}
1200 miles!

Just for interest, KA4YMY seems to be near Charlotte, KS4XQ is west
of Greenville, SC, and of course WA5IHL-11 is 20 miles west of me. That's
ONE HOP of 1100 miles!

You know, this is AWFUL! I wanted to shut this machine down for a
while to do some work on another, and I DON'T DARE! <G>

Rendered body type: text/plain

Earl, came by the office this afternoon and said the band had been open,
well I didn't see it as I left work before it happened. Got home from work
this evening and it was there cool! I've posted a couple of screen shots on
the webpage at http://www.qsl.net/nwtx-ares/aprs/ look under today's date.

73,
Ben Pollard

427. [propnet] Re: More on today's opening.

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Fri, 29 Jun 2001 08:09:48 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-21236-2001.06.29-07.32.03--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

> Here is some added info on today's opening:

<snip>

What does the (huge) 10-meter and (moderate) 6-meter BEACONet success
have in common with the APRS network that Ben and Earl are referring to

in their posts? Well-placed relaying mechanisms!

On 10- and 6-meters, the "mechanism" is the ionosphere itself. Stations don't have to be high-in-the-air to propagate long distances because the ionosphere is. Even 2-meter (Meteor) BurstMode bears this out.

Yet, when it comes to tropospheric propagation, High x 2= certain success. That is, high antenna and higher power. Of the two, the first is more critical because the troposphere appears to open "from the top down".

Yes, I know that this has been "known" for years through anecdotal accounts, but BEACONet experimentation has really shown this to be the case. How can we take this experience to the "next level"?

We need folks to establish a *minimum* of one Peer-Hub (based on the Kantronics KPC TNC with ROM 8.2 or above) in "every other grid"...making sure it is placed *at altitude*. The APRS network is not designed well to study propagation, yet -- despite that fact -- having an established network of Digipeaters overcomes those disadvantages from time to time. As a matter of fact, it was that characteristic that got me started on the whole BEACONet concept a couple of years ago!

Well done, BEACONet-ers! It is good to observe and share experiences from other services (like APRS). It can help us to fine-tune our approach.

428. [propnet] A call to action

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Fri, 29 Jun 2001 08:20:23 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-21237-2001.06.29-07.42.40--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Do you have two (or more) TNC's at home? Is one of them a Kantronics w/ROM 8.2 or above? Don't use it for your home station (unless you are at altitude, with high power). Use a KISS-capable TNC-2 (or clone) for your home station, along with UI-View software. It will give you all of the functionality you need.

Take that KPC, configure it as a Peer-Hub, marry it with a transceiver and antenna and find a high nearby location to house it.

You don't have a high location? How about a quick QSY to the APRS frequency (144.39) and observe who has an APRS digipeater with exceptional range? Then approach them with your equipment and ask if they may be willing to co-host a BEACONet station!

Do you work in a tall office building? You may be suprised what a "twin-lead J-pole" taped to a window of a 9th floor office can do for the network.

Do you park in a multi-level parking garage? How about placing a station in your car, and letting it run while you're parked on the top floor (watch that battery level <smile>)?

Yes, we will see icons on the BEACONet system as the summer continues and the inversions establish themselves. We will be able to take advantage of weaker inversions by establishing Peer-Hubs at altitude. Please...if you can do it...do it. :o)

Rendered body type: text/plain

Hi all,
I took the 10 meter beaconet down for the next 1.5
weeks. going on vacation. I still only copy rich and
the south american station. I will come back on 6
meters when I get back. I was up 7x24 in all
conditions but not much success. I was able to hear
but not print a few of you. More when I get back.

Wayne

430. [propnet] Components for Peer-Hubs

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Fri, 29 Jun 2001 08:44:30 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-21240-2001.06.29-08.06.49--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

So...now your interest is piqued and you are actually considering
sponsoring a Peer-Hub or two, but you don't have everything you need to
do it?

First, it's hamfest season! Go with a list of "wants".
o Kantronics KPC-model TNC with ROM 8.2 or above
o 2-meter FM transceiver (the higher the power the better)
o Rugged 2-meter antenna (a driven element from a small beam is an
                          excellent choice -- it's a simple vertical
                          dipole!)
o Coax cable (RG58/u= 6.0 dB loss per 100 feet @ 2-meters
              RG8x/u= 4.7 db loss per 100 feet @ 2-meters
              RG8/u = 2.5 dB loss per 100 feet @ 2-meters
              9913 = 1.8 dB loss per 100 feet @ 2-meters
  Just remember...if you're going 30-feet, RG8/u will lose less than
  1-dB on that run...a good cost-performance choice!
o ** Maybe ** you'll need a cavity filter (if you are co-locating with
  an existing APRS digipeater or a 2-meter repeater). Then again, if
  the site is high enough, you can gain a significant amount of iso-
  lation by simply placing the BEACONet antenna 30-feet below the
  other antennas. If the "hill" or "building" is high by itself, a
  30-foot loss of tower height is a fair price to pay for the ability
  to use the site without causing interference to other services that
  may already be there.
o Power supply to run the transceiver and TNC (though there may be
  12vdc there already)
o Lightning arrestor for the feedline (this will be a 24/7
  operation), though lightning protection may already be present at
  tall sites.

Second... Buck Rogers (K4ABT) runs a service that converts commercial FM
transceivers (old, but built like a battleship -- er -- the
transceivers, I mean <grin>). He can send you a transceiver,
pre-programmed to the BEACONet frequency (147.585 MHz or 53.530 MHz)
simply by placing an order with him to do so. More information here:
http://www.packetradio.com/fmradios.htm

Give it some thought, would you? We are on the verge of great BEACONet
success. Establishing a network of Peer-Hubs would take us a looooong
way to realizing BEACONet's true potential on the 2-meter band (as we
have seen it demonstrated on 10-meters).

I've set up everything for this here at the highest point in the lower peninsula of MI [EN74HD] with the exception of the ROM 8.2 or above. It's been running 24x7 for almost a week now. I'll have 135cm in t weeks and 6m as soon as I find someone to program an old Midland. Why do I need the ROM 8.2? Perhaps I'll ask Kantronics if an old KPC-2 can be upgraded that far.

The KPC3 can be upgraded to 8.2 .. just a matter of changing the prom. I
have seen/heard a few people doing this upgrade. Cost? $30-$50 I
think... can't remember. I have a 9612 that I bought with the prom
already in it. So, I never checked into it.

Rendered body type: text/plain

Hi Mark,
It's good to have your signal on the air, for sure! I'm looking forward
to the late summer/early fall tropo openings along the Great Lakes
region.

If you are running UI-View 24/7 and using the KISS mode of your TNC,
then you have all of the functionality of the 8.2/8.3 Kantronics ROM,
and should place a "1" (one) in your N-parameter of your Configuration
Code)

If you are running a KPC-2 TNC only (without the 8.2+ ROM), then what
you have is a Client-Hub. It is a signal source for others (a good
thing), but not a BEACONet digipeater. Your "N" parameter in your
configuration code (http://go.to/BEACONet | Configuration |
Configuration Code) is "0" (zero) because you can't digipeat on HOPn-N.

'hope that helps.

Rendered body type: text/plain

All I've seen for the past several days is Argentina! Something must be
wrong with the BEACONet system, right? Wrong! I took the BEACONet
station off the air and tuned the band. Guess what I heard? LU
propagation beacons! (and several other South American stations)

Don't get discouraged if you don't see anything...learn from it. :o)

This is yet another reason that we need to establish a real network with
stations spread across the world...stations that are stand-alone signal
sources for others to plot.

If the band is open, and no one is listening...does anyone hear it? :o)

Ev, W2EV

Now...back to 28.128. :o)

Rendered body type: text/plain

Folks, I feel like an idiot. I can't get PSK31srv to interact with
UI-View to save my life. Would someone please help me with some
step-by-step instructions? I'll even post 'em to the BEACONet web site
to help others.

I know there is a significant advantage to the use of BEACONet^31 . . .
but I'll be darned if I can't get there to try it! :o)

Ev, W2EV

PS> I can get PSK31srv to function on its own, just not with
UI-View(16).

Rendered body type: text/plain

A used HTX-100 for around $100, a simple dipole antenna + this...
http://www.njqrp.org/psk31beacon/psk31beacon.html

Run it 24/7 as a Client-Hub on 10-meters at 28.131. Now THIS has some
significant potential for blanketing the world with inexpensive
propagation beacons, a'la BEACONet^31!

Ev, I'm indeed very discouraged with the performance on 28128 AX25. In
fact, in my view all we have proven is that AX25 is a strong signal mode
only good for very strong signal to noise ratios--especially so with
wideband receivers needed for 1200 baud. We should to go to PSK31. We
need some sort of program that will allow beacon mode and wide AFC on
28131. Digipan works but is very inconvenient as it must be operated
manually----OK if your retired with little else to do! Cliff K7RR

Rendered body type: text/plain

Folks,
I just got an email from the UK. There is now interest in setting up a
2-meter PSK31-based system there, with an antenna pointing here! If you
live within 100 miles of the Atlantic shoreline, and haven't tried
BEACONet^31, now is the time to experiment...on 10-meters (28131
+1500hz). Get your feet wet with how the system works...then get ready
for a QSY to 2-meters for a real attempt at the Brendan Troohies!

More details later! Quick Lurking and Start Participating! :o)

Ev, W2EV

Something to think about:
As compared to a CW station, using a receiver with a 3-kHz receive
passband, a PSK31 station enjoys almost a full 20-dB's better S/N
ratio! So...a 25-watt PSK31 station is roughly equivalent to a 2500
watt "traditional" station. A 160-watt PSK31 station = 16000 watts of
traditional RF. BEACONet^31 is truly a sleeping giant!

Rendered body type: text/plain

I think my TNC is bad. When I use the ID command in the TNC, the Xmit
diode on the front of the TNC does not light up and my radio does not
transmit. I have checked to make sure the XMitok = on, cable between
TNC and radio is configured correctly with no shorts or miswired pins,
the radio transmits ok using the microphone. If the TNC is ok, will
the Xmit diode light up even if the TNC is not connected to a radio? I
can receive APRS packets fine.

Rendered body type: text/plain

I would have loved to help you, but my working setup is 3,500 miles away from
here :-) Unless you want to wait till sometime next week :-(

Just a few tips. I do use UIView 16.

1) You must download all the "diskette" files and unzip them into separate
temp directories. Run the setup from the 1st directory and go to the next
every time it asks for a new disk. Make sure you use the Psk31Srv version for

UIView 16, not the one for UIView 32.
2) When that's done, you will see that there are no capturing options. You must download the "addon" file and unzip it straight into c:\Program Files\PSK31Srv or whereever you installed the program. Add this part only with PSK31Srv NOT running.

3) Setup. PSK31Srv's part should be more or less self explanatory. Make sure you "start" the server option.
4) Now go to UIView16. In the setup there (I think it is in the misc. menu option if I'm not mistaken), define a new APRS server at hostname "localhost:3131". You don't need to log on to the server,so you can disable that
5) In the action menu, choose "open APRS server"(or something, I don't remember the exact words.
6) Now it should work. However, my experience is that UIView won't send anything to PSK31Srv until at least 1 call was heard. You can emulate that in PSK31Srv by typing "W2EV>APRS:[AA00XX]"in the "direct entry" window, and then click Send to Server. This should appear in your traffic bar in UIView. If it doesn't, do a telnet to localhost port 3131 while you got the rest up and running, and repeat while monitoring the telnet window.
7) Set up your UIView Station Setup as follows: leave the locator blank, enter your [AA00XX] locator in the comment field with whatever you want to put there, and set the "internet beacon time" to somewhere between 3 and 10 minutes. Press F9 at any time to force your beacon to be sent.

Good luck,

--Ramon W1/PA3EUG

I'd love to win that trophee. And I live less than 3 miles from the Atlantic, with reasonable good view towards the UK. Just the antenna requirements scare me a little...

About your calcs: sound a little like fuzzy math:
- you don't listen to CW with a 3 kHz filter
- the BWxPower product for CW is equal or better than PSK31
- I think you refer to PSK31 compared to SSB...

No problem, Joe...Region 1 doesn't have an allocation above 146.000.
The problem is, the European operators use PSK31 on 144.080, which is CW
only in the USA. I'm working on coordinating a frequency with the UK
station. When we agree on one, I'll share it with everyone.

I'm glad to hear that there is some excitement brewing!

Together with:

> About your calcs: sound a little like fuzzy math:
> - you don't listen to CW with a 3 kHz filter
> - the BWxPower product for CW is equal or better than PSK31
> - I think you refer to PSK31 compared to SSB...

Actually, they are one and the same for most people (anyone who uses a
multimode transceiver on 2-meters). Only rabid SSB folks, using
transverters and HF radios actually use CW filters on 2-meter CW.

Ok, Ok...it was an assumption, but the numbers are quite close. A 3-kHz
wide RX window (never mind the mode...CW or SSB) compared to a 31 hz
window is roughly a 20 dB difference (advantage to 31 hz).

Interestingly, KH6HME runs 14 elements (2x7 element beams) and moderate
power (from memory, somewhere in the 100 watt range).   He is heard
regularly by W6's (using their 3-kHz wide multimodes). :o)

I really think that BEACONet^31 is the mode to span the Atlantic! I
have a theory that it won't happen from the North Atlantic East Coast,
though. So...here's your chance to prove me wrong. :o)))

Either way...it isn't going to be me (I'm 800 km from the coast), but
knowing that I had a part in setting things up is enough for me. :o)

ok...I'm tired of smiling. Off to play on BEACONet^31 (if I can just
figgure out why I cant get this blasted thing to work with UI-View).

John,
Has it ever worked correctly? If "yes" then do a "hard reset" and try
again. You'd be amazed how many times that does it. (or did you say
you did that already? my mind is slipping these days).

Rendered body type: text/plain

Got a single hit on 53.53, if you could call it that, yesterday (Sat AM UTC). Received a partial decode at approximately 0133 UTC, 6/30 or 0833 CDT 6/29. Looks like call ended with B and alias was '-9'. Anyone "take the blame"?

Also I need to do some level adjustment on AF input to TNC2. Book says DCD indicator should be a flicker - mine is almost steady with the fixed output from current transceiver (Standard 5900). Specs don't list the level of this output so need to do some measuring and setup attenuator pad. Would also be able to get better impedence match between transceiver and TNC as discussed a week or so ago.

Hi Bob,
       I'm going to give PSK31 on 28.131 a try in about 10 minutes. We have
a hot, humid day forcast with thunder storms possible this afternoon, so I
may have to shut down and disconnect to avoid the possibility of a 200
Megavolt "QSL" in response to my signal!

I always find it difficult to choose between 28.128 and 28.131. PSKsrv is
more interesting because I think eventually it will be the mode to use for
HF, once we really understand how to use it and people like Rodger optimise
their software. On the other hand, there seem to be more stations on
28.128, which makes it more interesting when there is a good band opening.
Anyway, I'll be on 28.131 PSK today, so look for me. I think Ramon is still
in Europe, so I will probably be the only one in the Boston area.

Hi Rich, Bob,
             I was planning to run ^31 today on 28.131. You two are the
only stations I usually see on ^31 apart from Ramon who is very close by.

If you are both going to 28.128 (packet) today, I will do the same since

the chances of getting anything else on ^31 are slim. It's interesting to
compare the propagation characteristics of the two modes anyway.

Will anyone be on ^31 28.131? If not I'll QSY to 28.128 (AX25)

John, I was planning on PSK 31 today on 28131, but since Ramon will not be
there, possibly we all should go to 28128 AX25. For me packet is just a
waste but PSK 31 with Ramon was very successful. Let's all three (or
four!) of us decide on a good day for PSK 31 operation. So far the most
productive hours are between 1900 and 2100 UTC. I'm in Central California.
    By the way, I've downloaded UI-VIEW 16 bit version and trying to
understand it but running into the same stone wall Ev has!   Cliff K7RR

Hi Cliff/all,
I'm on 28.128 packet now and will stay there most of the day.

Cliff, my PSKsrv seems to work quite well and was not difficult to set up
but I am using UI-View 32. I have not tried it with UI-View 16.

You may have already tried this, but here's a suggestion. PSKsrv connects
to UI-View as an APRS server. This means that only items in the station
setup that apply to the APRS server, will affect what happens to PSKsrv. In
the Station setup, you will see "Beacon Interval Minutes". There are 3
settings here, fixed, mobil and Internet. The Internet setting is the one
that controls the APRS server update time. This means it's this time
setting that determines what happens to PSKsrv (when it's used in place of
a real APRS server). The other settings have no effect on PSKsrv operation
as far as I can tell. If the "Internet" setting is set to 0 or some very
long period, PSKsrv will connect OK but will not work, or will rx only.

In a normal APRS operation you would use this interface to connect to an
APRS server out on the net and would get updates and provide updates using
tcp/ip. It might be worth trying this. (Details are in the UI-View help)If
you can connect to an APRS server out on the net, you know that UI-View is
OK and your local ip setup is OK (UI-View uses the local ip "stack" to
connect to PSKsrv where PSKsrv is an APRS server at 'localhost' on port
3131)

PSKsrv itself can be checked by attempting a telnet to port 3131 (type
telnet 3131 at the command prompt)

PSKsrv has a setting that will cause it to transmit your call sign every so
many minutes. (They are required to do this in Europe but we don't need it)
I've found this to be a good way to check that PSKsrv is keying my rig,
because it does this independently of any connection to UI-View. On the rx
side you should be able to see signal/noise etc in PSKsrv's window.
Check you version of PSKsrv also make sure you have the latest.

Well I hope the above comments help in some way. If I think of anything
else, I'll pass it along. Usually when I get into these situations, it's 99
percent right, but one small thing is missing or wrong!

Good Luck, 73 - John n1nco

Nah.... just them Brits.... and I'm not sure that they consider themselves
to be part of Europe ;-) ;-) ;-)

Yup, I'm still in Europe and I won't be coming back until July 4. I left
London, got to the Netherlands via Belgium now. On Tuesday, I'll leave via
Belgium to Milano, to fly back to Boston via London on Wednesday. Literally
"do Europe in a week" :-(. My equipment (2m and HF) is off right now, and
the antennas are disconnected. I'll put it on as soon as I get home on
Wednesday.

After that, my on-air schedule will still be a little sketchy for most of
July. I will be leaving again on July 10 at night, to come back July 23
(Holland and Italy trip). There is a chance that I will be gone again on
July 25 for 3 days Sweden.

In August I don't expect to be traveling too much (at least as it looks
now). So I hope to see y'all (or "yiz" as they say in Boston) in PSK then.

In the mean time, Ev, did you get your setup to work? I think there are 2
key factors to get Beaconet^31 to work: CORRECT installation of the
UIView2.32 program and CORRECT installation of PSK31Srv including the UIView
connecting add-on. If interested, I can set up a conference call (using a
1-800 number) to do a 1-hour clinic or so for one of the evenings lateron in
the week. That might get things straigthened out...

--Ramon W1/G/ON/PA/ON/I/G/PA3EUG :-) (actually, just PA3EUG now... no add-on
prefix)

It is with sadness that I have to report that Roger has discontinued
further development of PSK31srv. I have asked him to repackage the
latest version as a single install (rather than having to install 1.04,
then apply the 1.08 update). Time will tell if he has an interest in
doing that.

In the mean time...the latest version that I'm aware of is 1.08. Is
that correct?

This is not a bad thing, per se`. The product is quite robust and --
because of the way it is designed -- will work for the forseeable future
with any/all versions of UI-View. I will not abandon further
development of BEACONet^31. I believe this is the future of the
experiment. We will simply need to build a mass of knowledge and
support the product ourselves.

I believe that we are better because of the release of PSK31srv. Let's
keep the momentum that we've gained. I will be BEACONet^31 active
within the week...if it kills me. :o)

In the mean time...would someone verify for me that 1.08 is the latest
version? I want to make sure it is the one posted to the web site
(http://go.to/BEACONet).

Ev, W2EV

> In the mean time, Ev, did you get your setup to work?

I've had two fairly major projects in the works (Wife's parents
celebrating their 40th anniversary as a family, and running some
frequency stability experiments on PSK31 on 2-meters) that have kept me
from continuing to get up on 28.131. I'll be refocusing this
afternoon/evening to see what I get.

I've gotten all sorts of very good help (in the form of screen shots,
help scripts, etc.) that I'll try...then post to the website to help
others, too.

Thanks for all of the kind offers, everyone! Let's see what works. :o)

Hi Rich,

Had ONE plot on you at about 2028Z this afternoon - picked up by the MFJ TNC. I must have messed up my settings somewhere on the main computer as AGWPE had lost it's connection to UI-View32 and wasn't receiving or transmitting this afternoon. Am experiementing now to see if the "SETI at Home" program was getting in the way (had it running full time in the background) and if I need to shut it down when running AGWPE.

Hi John and Cliff,

Not a thing on you so far today.

Bob - KC5DUI - EM26WE

Hi all

Thanks for the report Bob.

I would like to welcome W0IBM to BEACOnet I received one plot from him during 20:00 UTC (I did set my puter clock 4 hours ahead to accommodate UI-path and UI-View UTC) Looks like I should be hearing N8QLT but not? I am on vacation for the next 9 days. Look for my beacons on 10 and 2 meters 100 watts. I might fire up 6 meters.

Hi Rich,

I also had ONE plot on W0IBM - 02 Jul at 0024Z.

Think I found why I was loosing my connection to AGWPE - I'd upgraded UI-View32 to version 1.57 and forgot to tell my firewall software (ZoneAlarm) that UI-View32 could still operate when the "lock" was in place. Will see what happens tonight.

Wx forecast is "nice" through the 4th so will plan on leaving things on the air (28.128 unless someone schedules a "meeting" on 28.131).

Hi Bob

I have the usual summer time WX patterns. Thunder storms at any time. If
BEACONet stays alive (I hate to be the only one) I have a Polyfazer
(Spelling) that I can use for protection and stay on 24/7/365. Just need a
practical band!

Lets work on a BEACOnet^31 schedule. "BEACONET^31 call to arms" Help me here
Bob!

Rich

Rendered body type: text/plain

Hi all

EV, I have been trying to figure out your problem. All I can say is that I
have not had any trouble with UI-View, PSK31server or UI-Path. I am running
the 32 bit version of UI-View and maybe that could be the key.

OK, BEACOnet^31 certainly had it's up & downs (now no software support) as
does BEACOnet (AX25). If we are going to try to use PSK31 for propagation
study lets get serious about it. For example lets take the case of Ramon and
Ev (before Ev had PSK problems) I could turn my 6 ele beam south west and
copy him. Point the beam at Ev and ZIP. On the vertical ZIP. This I am sure
was back scatter and not very useful. Another problem is 2,3, or 20 signals
TXed at the same time. This is just a few observations I have made.

Here is my proposal

Ramon has the most experience with BEACOnet^31. Lets set up according to his
findings and explore the possibilities. Ramon, If you have the time would you
please tell us how you set up your software for beacon? Now lets pick a day
or 3 to run PSK31. What would be nice is if we had enough BEACOneters to run
both BEACOnet and BEACOnet^13 and compare (I have ran both at the same time).
I have a hard time leaving the BEACOneters (AX25) out definitely time to step
forward and stop lurking we need you. Lets hear some BEACOnet^31 planning.

Rich

Rendered body type: text/plain

Let's not start unfounded rumors :o).

BEACONet on 28.128 is alive and well. I am active 24/7. Just know that
lack of signals tells us much about band conditions. If you have
nothing on your BEACONet screen, then tune around the band. There
probably isn't much there! What you do hear would also be heard on
BEACONet, if someone in that area would have an active BEACONet station.

There are over 200 people subscribed to this listserve. To date, I can
catalogue a total of maybe...15 stations in North America who have
activated on 10-meters. BEACONet works better with more participants.
Let's power up, lurkers! :o)

This is fascinating stuff. Join us, would you?

Ev, W2EV

Good plan, Rich! I'm starting to think that there are a lot of folks
interested, but are waiting for a "hands on Elmer". With PSK31srv, we
are actually dealing with two Elmering opportunities: Elmering of PSK31
and Elmering of BEACONet.

As soon as I can get my system working, I will post step-by-step
instructions for everyone (including PSK31 stuff) on the web site.
BEACONet^31 needs only a soundblaster card...no TNC! Lurkers, get ready
to join us. The opportunity for greatness is right around the corner.

Rendered body type: text/plain

Hi All

I like Ramon's BEACOnet^31 (hot line) conference call clinic idea.

Here are some suggestion about what we should look at during out BEACOnet^31
run.

1) How about running from Friday night to Sunday night?

2) AF cordination and scan range ? (1500 Hz) Have yet to see anyone there.

3) Beacon leingth how long does it really need to be?

4) TX time. Should we all just let her rip every five minuets and hope for
the best?

I am not a PSK31 expert but I do enjoy the study of propagation. BEACOnet has
and will continue to be a growing success. Lets see what we can do to enjoy
the same growing success of BEACOnet^31.

Rendered body type: text/plain

Hey - great! I wasn't sure the setup was even working. I have something set
wrong since I don't even see W0IBM on its own map. I have it set to run
KISS, but if I turn that off, UI-view doesn't want to talk with the PK232
in normal mode. So, something is fishy. We have two PK232s in the shack,
and both give me the same results. Before the ISS test, I had it running
and it seemed to be working "better". I'm not sure what I did in between.

For ISS, I used a PK88 connected to one of our 2m FM rigs, on a different
RS232 port. I can actually switch between the two from my office using VNC
- assuming I remember all the settings. :)

Subject: [propnet] Re: BEACONet 28.128 - 01 Jul Welcome W0IBM!

Hi all

Thanks for the report Bob.

I would like to welcome W0IBM to BEACOnet I received one plot from him
during
20:00 UTC (I did set my puter clock 4 hours ahead to accommodate UI-path
and
UI-View UTC) Looks like I should be hearing N8QLT but not? I am on vacation
for the next 9 days. Look for my beacons on 10 and 2 meters 100 watts. I
might fire up 6 meters.

Rendered body type: text/plain

Just for the record. I was on 28.128 (AX25) yesterday up until 4.30pm EDT,
when thunder storm activity forced me to shut down.
I did not get any UI-View plots or hear any packet signals in the audio.

Better luck when condx improve.

73 - John - n1nco

Hi Tony

Yes, your setup is working just great. I will have an interesting propagation
report for the group later today. Your station is the hart of my report.

also KISS is the mode that you want. Another thing you might want to look into is setting up you BEACOnet DIGI the direction are on the BEACOnet web site.

Don't feel bad. I have an old KPC 2400 that won, t go straight to KISS mode. I have to set up the comport normal mode first then switch to KISS. What the heck it works.

Hi John

This might be a good indication as to band conditions Sunday. I got one plot from South America all day. TE here in South Carolina is more reliable then the phone company. LOL Ill have a 24 hour report later today.

OK Folks, this is the conference call information for the BEACONet^31 clinic. Please send me an email directly if you plan to attend. We can host up to 16 participants here.
DATE/TIME: Thursday, July 5, 21:00 EDT / 18:00 PDT
PHONE NUMBER: I will email you the phone number and login instructions if you confirm your (tentative) attendance by sending me a message.

Conference Rules and Regulations:
1) I reserved this bridge for 2 hours. Do not call in before the conference time (as other conferences may be using it), and please be prepared to leave it when our time is up.
2) The topic is: HOW TO GET UI-VIEW16/32 with PSK31Srv WORKING. Please stick to the subject. Please let's not discuss general BEACONet issues, etc. Please make sure that you already tried hard to get the program to work on your own. Make sure that you have all software components downloaded on your HD, see the BEACONet website for more info. Having a WORKING packet-BEACONet setup (on 2 or 6 or 10 meters) is a good first step. You *must* have all PSK31Srv software components.
3) This conference bridge is courtesy of my company. Please

Yep- you probably should have been hearing me, but I arrived home this evening after canoeing the whole weekend and found the system had locked up sometime Saturday, I think.

All rebooted and beaconing on 28.128 again.

And Rich, that exchange between your station and mine on the 29th was impressive- several hours of 100% copy.

To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-21843-2001.07.02-18.28.05--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Get the latest version of PSK31srv on the BEACONet website at
http://go.to/BEACONet

In the leftmost frame, you will see, in red letters, the headline
titled: "** News ** News **" followed by "BEACONet31 _News_!" Hyperlink
from the word "News" (it's flashing in Netscape, but not in IE...I don't
know why, so don't ask <grin>).

READ THE TEXT. It will tell you what you need to know to get started,
complete with a hyperlink to a site that includes wiring diagrams for
just about any transceiver I've ever run across.

Note: To get started (in RX-only mode), all you need is a
transceiver-headphone to soundblaster cable. TX is just a little more
complex, but not much.

Download the PSK31 program, and get setup for at least Receive-only
operation (as described above).

PSK31 can operate as a stand-alone PSK31 program! Tune to 14.070 MHz
USB and turn up your volume (this is an international PSK31 QSO
segment). You should be greeted with "streaks" on your "waterfall
display". Click on one of them, and you should see QSO text appear on
your screen. Take the time to read the help files. They are
excellent and highly informative.

Get at least this far by tomorrow night (tuesday night that is).

If you are having problems getting this far, then let us know. We'll
help you through it as much as we can. (this is as far as I've gotten,
actually -- <smile>).

Thanks, Ramon for the Thursday night conference call opportunity!

Ev, W2EV

For those of you who have not seen my signal from Tucson, don't worry, I
have not fallen off the air. Took the H.F. station apart and installed the
FT-920 into the truck for a trek to San Diego a few weeks ago. I will be
putting the station back together again tomorrow and will have a PSS signal
back on the air by tomorrow afternoon.

I am currently exploring the idea of placing a permanent PSK beacon on
28.131. I have the equipment to do this I just need the site. I am hoping

I can do this at the University later this fall. Ev, Please send me the
link to that PSK beacon board. For some reason that message I saved as gone
by the way of the bit bucket.

Jeff N7YG

PS. The tempature today in Tucson is a nice cool 111 degrees F!

Not enough memory will slow the program to ascreatching hault. The new SETI
needs at least 64 MB of memory to run with another program. I can run UI-View
@2 copys & UI-path @ 2 copis and SETI with no plroblem (32 MB of memory). If
I try to run PSK31server SETI comes to a screeching halt but beyond that no
problem.

Hi all

Talk about a weard band propagation. Here is my report. (one station for 24
HR)

W0IBM was the only station heard here. Here is the break down.

HR UTC 20:00 @1 plot 22:00 @ 9 plots 23:00 @ 4 plots   (today =) 13:00 @4
plots 18:00 @ 1plot 24:00 = 1 plot.

Super! BEACONet success is more a matter of persistance than luck.
:o) Welcome aboard.

SETI@Home and BEACONet have similar interests! They use the normally
"unused clock cycles" of computers very effectively. How can we get
other UI-Frame users to use their "unused transceiver time" for BEACONet
... even if they "switch" back to other services for their typical
operation?

This has potential...but how to exploit it?

Ev, W2EV

ps...congrats, Earl! :o)

Got the shack cleaned up, radio installed and PSKserv an UIView running and now have a beacon on 28.131. The bands are really dead at the moment. Tuned across 10 meters and head absolutely nada!! 20 meters is even a bit sparsely populated today.

Ev, thanks for the link on the PSK board. Looked at the site and I think this board could be utilized and eliminate the computer for a transmitting beacon.

Well see what materializes today before the thunder storms move in this afternoon.

It depends on the strength of each of the signals at the receiving ends. I
have had a 100% copy qso while running only 100mw with another station also
running about 100 mw. We were within 150 Hz of another station with an
extremely strong signal. I would venture to say you could get with 50 Hz and
still complete a qso.

Jeff

Hi Ev,

Just finished visiting the www.psk31.com web site, which has some
overview documents by Peter Martinez, PSK31's "godfather".
None of the articles say definitely how closely two signals can be and
still co-exist. However, there are some spectral graphs of a "properly
adjusted PSK31 signal which shows the 60 DB bandwidth to be 200 HZ.
Adding allowance for equipment frequency drift (is 50 HZ too much of a
stretch?), my best guess would be 250 HZ between stations. Perhaps
someone with an engineering background could comment on the width
required for the guard band separation - perhaps 50 HZ is not realistic.

Be interested in comment from the rest of the gang.

73,

Joe, K4DMU

High altitude balloon may include a BEACONet Hub!

There are ongoing discussions to include a BEACONet Hub on a
high-altitude balloon launch from Kansas City! Why BEACONet? Why not?!
:o) Our infrastructure is designed to work well for such purposes and
we have a community of experimenters who are likely to thrill at the
prospect of 400+ km BEACONet catches through such a "man-made
ionosphere".

More details coming as soon as they are made available...but this is a
heads-up to the heartland that excitement is brewing. Power up on
BEACONet's 2-meter frequency and prepare for an exciting event!

Ev, W2EV

Rendered body type: text/plain

Hi Jeff & Joe,

Thanks for the thoughts on PSK31 "channel spacing". PSK31 is
fascinating, for sure. I ask about the "effective separation" between
PSK31 signals because of a possibility of establishing a BEACONet
sub-band of sorts -- for stand-alone point-source beacons -- world-wide.
:o)

Here's what I'm thinking...

Suppose we establish 14.131 (transceiver frequency) as the 20-meter
BEACONet^31 frequency. Then we can divide those 3-kHz of PSK31
"sub-band" into "channels" geographically, worldwide something like this
(each separated by 61 hz):

14.131 +
  62hz, 123hz, 184hz, 245hz, 306hz, 367hz, 428hz = Africa
 489hz, 550hz, 611hz, 672hz, 733hz, 794hz, 855hz = Asia
 916hz, 977hz, 1038hz, 1099hz, 1160hz, 1221hz, 1282hz = Europe
1343hz through 1709hz = Unclassified for general home-based
                        BEACONet operation (weekend beacons, etc.)
1770hz, 1831hz, 1892hz, 1953hz, 2014hz, 2075hz, 2136hz = N. America
2197hz, 2258hz, 2319hz, 2380hz, 2441hz, 2502hz, 2563hz = S. America
2624hz, 2685hz, 2746hz, 2807hz, 2868hz, 2929hz, 2990hz = Australia

Wouldn't it be interesting to get 42 BEACONet^31 client stations
(transmit-only beacons) activated, world-wide on these "channels"? Each

station would transmit for the full minute (no breaks...100% duty
cycle). By simple observation of the waterfall display, one could tell
to which area of the world the band was propagating! By using BEACONet
protocol and UI-View, it would be possible to know even greater detail!

I wonder if PSK31srv could be programmed to scan the entire 3-kHz
sub-band, much like a Police/Fire scanner?

This would be very interesting! Of course, frequency stability would be
an issue (does anyone manufacture crystal controlled SSB transmitters
anymore?) Just thinking out loud. Maybe I'm nuts. :o)

Ev

Actually, there is a scanning option built into PSKserv. Find the PSKServ
.ini file and make the following changes (assuming I did the math
correctly) Change SCAN_STEP_SIZE to 62
While you are there change, the transmit and receive frequencies to 1464.
There is an item for scan range, but it is limited to 500 by program design.

Run PSKServ and check the scanning box under the receive freq. It will now
scan in 62hz increments with a scan range of +/-500 hz either side of 1464.

Jeff

Perhaps the question should be if the 3 kHz sub-band can be scanned
effectively.

PSK31serv can be set to scan most any bandwidth at most any scan rate.
As some of the program users discovered
initially, these settings have to be tweaked in order to locate, lock on
to, and demodulate an incoming signal with
minimal loss of information. There are also delays inherent in the
signal processing and data acquisition functions
which must be accommodated.

The adjustments to scan width and scan rate were actually provided to
locate stations operating +/- a particular
operating frequency rather than to scan for stations operating over a
wide range of frequencies. To scan and detect
a large number of beacons will necessitate a stringent, well planned,
and tightly controlled operating protocol
which must be religiously observed by the beaconing stations. Items
such as synchronizing header strings, accurately
observed time slotting, solid transmitting frequency stability and a
highly motivated group work ethic would be
essential.

If PSK31serv could be modified to do time scheduled frequency hopping
rather than band scanning, and the beaconing
stations rigorously observed the to-be-established operating protocols,
a much higher success rate could be achieved.

>

> This would be very interesting! Of course, frequency stability would be
> an issue (does anyone manufacture crystal controlled SSB transmitters
> anymore?) Just thinking out loud. Maybe I'm nuts. :o)

If you haven't already done so, visit   http://smallwonderlabs.com/
This gentleman has created a 3 Watt PSK31 transceiver (20 meter and 40
meter models currently, 30 meters in development)
that might fit the bill. One of these with a 10 meter transverter
and/or power amp would be an elegant solution.
Who knows, with encouragement, the manufacturer might even be persuaded
to consider making a 10 meter model!

The 20 meter model is reviewed on   http://www.psk31.com/.

Disadvantages: The units are kits and would have to be constructed.
Some toroid winding is required. Would this
                be a problem to PROPNETers?

                Output power is 3 watts. I have seen varying opinions
presented on the list about how much power
                we should be using for PropNet operation. Are we trying
to detect openings that only high ERP
                stations could use, or those accessible to both "Big
Guns" and "Little Peanuts"? If the latter
                is the case, 3 Watts might be the preferred operating
power level.

I recommend a visit to http://www.psk31.com/ by all interested in PSK31
operations. There is good information there on
theory, setup, pros and cons of various radios, limitations of sound
cards and lots of other "good stuff" pertaining to
PSK31 use.

Thanks for listening. Hope to see the thoughts of the other PROPNETers.

Interesting concept, Ev. One could also use a streaming audio server on
the Internet (e.g., Shoutcast) to allow anyone to monitor the sub-band at a
selected (connected) beacon location. There are systems working now that
use streaming Internet audio to network ham radio and scanner traffic:

http://www.shoutcast.com/directory/?s=scanner&st=gs&l=25&x=16&y=7
http://www.remotebase.com/
http://brianfritz.com/kcscanning/
http://213.93.205.2/scanner/

Replicating our BEACONet^31 10 meter "sub-band" is just as easy. Next,
with the right computerized control one could collect real-time PSK31
beacon propagation data from multiple sites.

As far as PSK31 signal separation goes, I agree it is feasible to
interoperate within 50 Hz, but we should consider designing our tone
separation at 80-100 Hz to account for drift, AFC and other potential
issues. However, some testing is probably in order to see what really can
be done.

Let's brainstorm this further and see what ideas others have.

Actually, I see timing as a bigger issue than frequency multiplexing. We should somehow differentiate transmissions by time because you don't want 2 stations to be transmitting at the same moment, since you can only copy 1 simultaneously anyways. Something like the NCDXF beacon set on 20 meters, but then using PSK31.

I was looking at that MCU based PSK31 beacon kit that Jeff sent me... very interesting. If it comes with a real PCB (instead of Manhattan style) and a decent way to program the EEPROM (e.g., like TinyTrak), it could work easily. Just remember that you PSK31 transmission string needs to be more or less long, since it will take the first 10-15 characters to auto-tune into the signal. Of course, using a more exact frequency scheme as you guys suggested would decrease the tune-in time.

--Ramon w1/pa3eug Boston, MA [FN42KI] -- NOW QRV in BEACONet^31 at 28.131/+1500 !!

Well, at the client level W1SQLPSK decodes up to 20 PSK31
signals at a time with a single sound card. See:

http://www.faria.net/w1sql/psk31.htm

Other client PSK31 programs decode more than one signal at
a time, and have done so for some time.

There may be other limitations, and other reasons to retain a
timed schedule for BEACONet^31 transmissions, but copying
multiple PSK31 signals at once can be accomplished.

Hi Mark,
If he's printing you OK, then the question is why can't you print him.
Open a Terminal window and capture his transmission. Send a copy of the
frame to the list. We'll take a look at it and see if we can help to
determine where the problem is.

Alternatively, you can QSY to the APRS frequency (144.39) and let it sit
for a couple of minutes. UI-View will decode APRS packets to the screen
fine. If that works, then I'd say the problem is with the other
station. A frame-capture will tell us for sure.

Anyone want my slot tonight at 0100 UTC? I've tried for two half days
using every platform I have----windows 95, win 3.11 and three different
computers with absolutely nothing but frustrating negative results. It
is apparent that computers and I simply do not get along. Since this is
ham radio I do not need this. How anyone can ask for money for UI-VIEW
is beyond my comprehension! 73 Cliff K7RR

First, N7YG started coming through about 0030 UTC very well indeed. Note
now, we are talking about PSK on 28131---not 28128. I print him with a
tone of 1490 Hz, a respectable difference from Ramon's indication, earlier
of 1475 Hertz. I have been beaconing all day on Ramons indicated slot.
Since 0300 UTC and down at 1150 Hertz, both W4BPC and N4ZPT/7 have
been chatting away. LOVE IT! Good signals on ten meters. Both read an
IMD of -24 or better. Tom, you asked what bandwidth the display indicated
on your MT63 and I read an even spread between 550 Hertz and 1550 Hertz.
I am using a SSB filter of 3 KHz bandwidth. Also, I printed both the
URL's for the ZL1BPU and the MIXW page you sent.
I do not know the procedure for "breaking in" but I could not do so.
If you saw some QRM it was me trying!! 73 Cliff K7RR

Cliff
I do not see you on the map, but I do see data in the received window of
PSKServ. What is you QTH, If you are in 7 land, must be up in the Seattle
area??? If they can not get you fixed up on the landline tonight, let me
know and I will take a stab.

Also seeing KC5DUI and WD4RBX. I also think a saw Roman's PA3 call, but most of it was pretty grabbled. I just noticed that I am on the windom antenna which has a pattern like a drunken C-130 flight engineer after a Soju binge in Korea!!!. Tried switching back to the vertical, but there is some real nasty manmade noise that looks like a picket fence on the water fall. Anyone else seeing this??? It does not appear to be local and it is not computer hash at least from this end.

It looks like the T-storms are moving out so I will keep thing up until about 0300.

Jeff

Only copy noted on PSK31 today was a plot on N7YG during the 2200Z 5 July time period and one during the 0000Z 6 July period. Callsign on the UI-View Map and in UI-Path was garbled but was able to see it in the PSK31Srv Receive window (email address came thru ungarbled!).

Ramon, Ev, Joe and Robert - nice to talk to you on the conference call - made some changes to my setup as we went along so will see what the next couple of days brings. Unless some "unexpected" storms move in I'll try to stay on the air through the weekend.

Ramon - have a good vacation and thanks for setting up the call.
Ev - now that it's working expect to see you on the map tomorrow.

Bob - KC5DUI - EM26WE

It was very nice to have the interest in a "Live" Elmering session, and
to have the turnout that we did. I -- for one -- found that I was
missing a single parameter in my UI-View setup that kept things from
working for me on PSK31srv. The moment I changed it, things started
working.

I'm going to let things run on 28.131USB+1500. For the next three days,
I'll be away at a convention (with very limited eMail). At night, I'm
going to spend some time putting together a 1-page configuration
checklist to post to the website.

I learned alot from other people's experiences, too. It was great to
have such willing folks participating.

Thank you Ramon! Well done!

Ev, W2EV

&(% miles on 2 meters is quite a feat, but don't get too excited. All this
means is KI0BJ gets into the APRS LAN in Montana, Idaho or Washington and
you hear/print that station because it was digipeated from WA5IHL-11. The
question is did WA5IHL-11 get the RF packet direct from the APS199 LAN or
was it a packet that was forwarded from an internet port???

At 06:33 AM 7/6/01 -0700, Jeff Steinkamp blasted the following out into the
ether:
>&(% miles on 2 meters is quite a feat, but don't get too excited. All this
>means is KI0BJ gets into the APRS LAN in Montana, Idaho or Washington and
>you hear/print that station because it was digipeated from WA5IHL-11. The
>question is did WA5IHL-11 get the RF packet direct from the APS199 LAN or
>was it a packet that was forwarded from an internet port???

      The packets I received don't indicate anything about an internet
link, they seem to be RF-only. I see internet stations quite often here,
and they usually come through KB5WIO over in Amarillo. These are
different, they indicate a path of WIDE2-2 was used.

KI0BJ>APS199,WA5IHL-11*,WIDE2:=4522.47N/10747.89W&PHG7260 Rex in
Yellowtail, Montana
KI0BJ>APS199,WA5IHL-11*,WIDE2:=4522.47N/10747.89W&PHG7260 Rex in
Yellowtail, Montana

      And -- it's the first time I've seen Montana!

      7 3
      Earl

Thanks, Ev -

The problem is the old Kantronics KPC-2 TNC - it just does NOT know KISS

mode. My neighbor came over and we put our notebook computers side by side - same settings in UIview. Then he hooked his computer (that at his house and TNC prints my grid-square symbol locater just fine) to my TNC and went over to APRS - nada, nothin' zip nil squat. The other TNC's arrived today, but I purchased them to do BEACONet on 6m and 135cm, so need another TNC or get the KPC-2 upgraded.

For all the rest of ya, I'm still beaconing on 147.585 from [EN74HD] for your use - I just won't print you. Hey, there was a little weak tropo this morning - I worked Cleveland from up here in northern Michigan with the squalo on my mobile on the way to work so I hope to have one of you print me someday.

Gone to call Kantronics...

Mark KB8GC

Subject: [propnet] Re: Station Change

Hi Mark,
If he's printing you OK, then the question is why can't you print him. Open a Terminal window and capture his transmission. Send a copy of the frame to the list. We'll take a look at it and see if we can help to determine where the problem is.

Alternatively, you can QSY to the APRS frequency (144.39) and let it sit for a couple of minutes. UI-View will decode APRS packets to the screen fine. If that works, then I'd say the problem is with the other station. A frame-capture will tell us for sure.

Ev, W2EV

Rendered body type: text/plain

Just checked on my system from here at work and found out I had two plots on
W2EV during the 1300Z hour and two more during the 1500Z hour (last at
1510Z)plus two plots on WD4RBX during the 1600Z hour (last at 1636Z)!!!
UI-Path really comes in handy when "you can't be there" to check things out
real-time.

Looks like the "system" is working and glad to see Ev's plot on my map.

Bob - KC5DUI - EM26WE

I finally got my 70 watt Midland programmed for 53.53, but the very
helpful tech told me that the entire speech amp on that model is in the
mike, so I won't be able to just wire from the TNC to the mike jack :-[
The PAR loop antenna for 6m came in yesterday, so if I can sneak away
from weekend company I'll try to figure out how to get TNC audio into
the radio and come up on line.

Any experienced Midland lo-band 2x radio techies here?

So if your local ham emporium just happens to have a dusty one on their
back shelf, I want to discuss purchasing it.

Kantronics just confirmed that the 2.3 firmware in mine doesn't do KISS
mode, which seems to be why UIview doesn't put other stations on my map.

TIA,

Mark KB8GC still trying to get all the stuff together for a tri-band
BEACONet set up.

Mark, I thought that my Midland was the first radio that had ever stumped me
when it came to deducing the pinout on a four pin mic plug when I couldn't
get hardly any audio through it. When I finally got ahold of someone at
Midland I found out that I had it right all along, but you just have to hit
them with a LOT of audio. I think that 1V (p-p? rms?) was the figure the
Midland guy quoted me.

And Bruce, I still haven't gotten back to you with the model number of that
radio because I still haven't located it in storage. :^(
(However, I do know now where my GE's are. Haven't pulled them yet, but at
least they've been located.)

Rendered body type: text/plain

Hi Gang,
Thanks to the conference call that Ramon sponsored last night, I've been
BEACONet^31-HY active today! I came home to notice four plots:
WD4RBX
KC5DUI
another station at KC5DUI's location (more on why I don't remember who
in a minute
and myself (dug)

Unfortunately, I double-clicked on KC5DUI's icon, clicked "more" and
UIView(16) errored out with the message "Uiview has caused an error in
VBRUN300.DLL.

I'm hoping that it's something goofy with my computer. I'll restart and
let you know if it happens again tomorrow.

It's nice to be playing with PSK31srv finally. I need to learn the
personalities of the program to help others as they come on board.

Just fyi,
Ev, W2EV

Rendered body type: text/plain

At 04:14 PM 7/6/01 -0700, Jeff Steinkamp blasted the following out into the
ether:
>I got more time TDY into Kunsan than most people got PCS. What a great
>place to be FROM!!!!.
>
>BTW Earl, you have an relatives with the last name of Needham that fly's
>C-130. Hand an A/C a while bake whose name was Needham, but can't remember
>the first. (Craig maybe??)

      Dunno. The only one I ever ran across was back in 1979 when I was
still in the Marines. The base commander at Futenma MCAS was named
Needham. never found out anything about him, though...

Well, I was up on the PSK frequency a while ago and actually plotted KC5DUI.
Came back a few hours later to check on things and discovered the whole ham
shack shut down. Turns out The electrical outlets in the ham shack are on
the same breaker as the electrical outlets in the master bedroom. I guess
the overpaid electrician did a REAL fine job labeling the CB box when they
rewired the house 3 years ago.

Had the breaker off to install a much needed ceiling fan in the master
bedroom. So I am back on the air as of 0040Z. I'll check it again when the
XYL and I return from our dinner engagement.

I'm definately receiving W1/PA3EUG on very short skip. Interestingly, it looks like both 'eug and 'dui are sharing the same TX timeslot. I have an interesting screenshot to share for anyone interested (showing the waterfall display).

I also just copied W4DMU!

Also, just as interesting, no icons on UI-View from either Ramon or Joe!

Here's what I received in PSK31srv...any thoughts as to why I didn't get any plots?

Sorry folks. I broke my own cardinal rule of letting things sit for a while and observing. It took a couple of minutes, but W4DMU just showed up on my UI-View screen. Interesting that it delayed, though.

Still no icon for Ramon, though the text appears complete. Maybe it's because his grid isn't right after the ":"?

I'm gonna say it again...the only reason Earl is getting these kind of results on the APRS network is because there are digipeaters at altitude *and* there is very little APRS traffic (the APRS infrastructure isn't designed for propagation study, under "normal urban load" conditions).

I've got a sinking feeling that folks are bailing out on using 147.585 because of "lack of success". In fact, we've learned alot...it's just a matter of figuring out what it's going to take to get some KPC's on buildingtops and mountaintops, tuned to 147.585.

Earl (and Stan), I'm very excited about the DX you are getting. Please...keep posting from time-to-time. It shows that the concept works (even if it's happening on another frequency)!

Mark,
Don't use KISS mode, then. Use Host Mode=None and Command
File=Kantronics. You won't be able to digipeat on HOPn-N, so set your
configuration code to VK0pah-# (a Zero after VK). Everything else
should work ok.

Give it a try and see what you get!

I have been Rxing Ramon almost all day with no plot (entire bacon). I think I
know why.

PSKsvr will only "last capture" text formatted (like this) WD4RBX>
APU***:[gridsquare]

Like this WD4RBX>APUPSK:[EM84NM]

If you do not TX this there will be no plot on UI-View.

Rich

Rendered body type: text/plain

CALL - Time in UTC/# of plots from UI-Path (some were "broken" calls but
easy to put in
correct line)

W2EV - 1300Z/2 - 1500Z/2 - 1700Z/3 - 2300Z/3

WD4RBX - 1600Z/2 - 2200Z/1 - 2300Z/5

K4DMU - 2200Z/1 - 2300Z/4

Starting into 7 July (UTC) have had additional plots on all three with
WD4RBX being
in the lead so far.

Bob - KC5DUI - EM26WE

95. [propnet] Re: Why Ramon Isn't plotting in UI-View.

From: Joe Leitsch <joe@iglou.com>
Date: Fri, 06 Jul 2001 22:49:01 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-22659-2001.07.06-22.09.55--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

To confirm Rich's observation:

Up until the conference call last night, I had been running PSK31srv Ver
1.04 and was plotting Ramon on UI-View32 perfectly.

After I upgraded to Ver 1.08 last night, I noticed that while I could
copy Ramon on the PSK31srv screen perfectly, I couldn't get him to plot
on UI-View32 at all. After playing with options and reloading software,
I still wasn't having any luck plotting him. Then - surprise!! - I
copied EV and KC5DUI and both of them plotted perfectly. Hummmmm...

I looked at Ramon's text string and saw he had his call sign in the
first position after the colon.

PA3EUG>HY0F0A:W1/PA3EUG [FN42KI] - PA3EUG@AMSAT.ORG

EV's string read:

W2EV>HY0G02:[gird_locator] W2EV@ARRL.NET

KC5DUI's string looked like EV's.

The two morals to this story:

1. If anyone in your intended audience is using PSK31srv, your beacon
string needs to be similar to Ev's with the [grid_locator] in the first
position after the colon (right at the beginning of the BEACON COMMENT
box in the UI-View Station Setup menu).

2. If you are running PSK31srv Ver 1.04, it doesn't matter where the
other guy puts his [grid_locator] information in the string.

Also found out why my plot seemed to be moving around last night.
I had the Random Grid Square Plot item in the Miscelaneous Setup menu
checked. This item causes your Grid Square information to be randomly
offset to prevent two or more stations in the same grid square to be
offset from each other on the map so they don't cover up each other.
Sorry for the confusion. I really don't live in a moving house trailer!

Hope this helps,

73,

Joe, K4DMU

Hi Bob

Thanks for the report. The Antron-99 was quite noisy yesterday so I switched to the vertical dipole. Hummm Maybe it was the 10 inch parabolic mirror in my telescope that was the cause for the signal strength. LOL I took my scope out side to observe Mars for the first time this summer. Seeing conditions were bad here but worth the work ;-).

 Ev, I am no expert but it looks to me that PSKsvr needs text formatted like above to know that it has received a valid station. If you have time to watch the program RX a beacon you will notice that all the in comeing text is for the most part is ignored but the text above is what is sent to the "Last captured" window.

In PSKsvr 1.08 go to OPTIONS and check auto capture locaters.

I hope that this helps.

You are right about the last captured window, but even "weird" formatted text is sent to UIVIEW, regarles if it appears in the "last captured" window or not...

I just updated my beacon text, let's see if this works better. Started copying you perfectly here Rich since about 15 minutes ago. The band is opening up (or you just switched to Beaconet^31 :-))

Hi folks,

I changed my setup once again now to read:
W1-PA3EUG>HY0F0A:[FN42KI] .... etc. Myself, I copy it fine on the PSK31Srv
lookback into UIView. Does anyone have any troubles with this? If so, let me
know...

Thanks,

--Ramon

ps. copying N1NCO and WD4RBX fine at the moment... a little earlier this
morning

I'll keep the 147.585 and 53.53 (still working on getting the latter up
on air) up AT LEAST until winter. If I go beyond that I'll have to
figure out ice shields for the antennas, because the stuff that falls
off of a 1296' tower on the highest point in the lower peninsula of

Michigan is deadly. I have a picture of a car in the parking lot with
the roof smashed down to the top of the seats !

Mark KB8GC [EN74HD]

Oh, actually, I'm taking the 2m one off-line today to put a KISS mode
TNC on line - shouldn't take me more than an hour, and the wind is so
strong today I don't see any tropo in my afternoon ;-)

        Cc:
        Subject: [propnet] Re: First Montana!

        I'm gonna say it again...the only reason Earl is getting these
kind of
        results on the APRS network is because there are digipeaters at
altitude
        and there is very little APRS traffic (the APRS infrastructure
isn't
        designed for propagation study, under "normal urban load"
conditions).

        I've got a sinking feeling that folks are bailing out on using
147.585
        because of "lack of success". In fact, we've learned
alot...it's just a
        matter of figuring out what it's going to take to get some KPC's
on
        buildingtops and mountaintops, tuned to 147.585.

        Earl (and Stan), I'm very excited about the DX you are getting.
        Please...keep posting from time-to-time. It shows that the
concept
        works (even if it's happening on another frequency)!

Come on you guys, shoot a little signal to Central California. I've been
on all day. I have been listening with a 1480 Hertz tone rather than
1500 Hertz as that seems to be where most of the beacons are. The XE1
propagation beacon on 28195 is pounding in today. Cliff K7RR

Rendered body type: text/plain

Interesting to note...I've experimented a little with these two titles
with a couple of local 2-meter SSB folks. Here's what I've found:

Me   Other Station   Results

```
PSK31srv Digipan         No decoding
Digipan  Digipan         Good Decodes both ways
Digipan  PSK31srv        No decoding
PSK31srv PSK31srv        Good Decodes both ways

Is anyone familiar with why this may be the case?

Ev, W2EV

 Hi EV: Guess this is a good one to jump in on ....I dont have the answer
but I can use both programs at 14070 and I cant tell the difference
........but when I go to 28.131 since the band I assume the band is so
lousy I dont see anything on either program...
I have to run my bw down to 600hz because I have a qrn tone a little above
1500hz. I dont have lot of confidence in my psk setup on beacon net SRV. It
is UI_VIEW 16 with all the three files and the  the update in the UI_VIEW
folder. I dont have any idea what I am sending out. I read all the mail on
propnet and the discussion about the conference call and I am confused...I
do know it works at 14070 because I have used both programs DIGIPAN and
SRV......help I hope the instructions you are going to post on the website
will help.

 73 DAN W6PRL GRASS VALLEY CA.

To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-22809-2001.07.07-19.42.32--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Ending totals from UI-Path for 7 July UTC -

K4DMU - 1400Z/1
K9ER - 2000Z/3 - 2100Z/5 - 2300Z/16
WD4RBX - 1200Z/3 - 1400Z/4 - 2100Z/1 - 2300Z/1
W1/PA3EUG - 2300Z visible in PSK31Srv screen with fragments (in 0000Z/8 July
have seen GR##ID printing OK but no callsign to make valid plot)

I appear to have been transmitting (was set on 1500Hz) a bit low compared
to other signals so have adjusted my TX and RX freqs upwards a bit (ie:
WD4RBX showing at 1574 on my display, K9ER at 1588 and W1/PA3EUG at 1552).
Am now centered on 1575Hz and using a 50Hz scan range. Will probably go
back to a 100Hz scan when I'm not sitting here watching the display.

As I type this (0016Z) K9ER is getting weaker and W1/PA3EUG has a plot on
the map as EUG at 0013Z.

Bob - KC5DUI - EM26WE

Just put the PSKServ back on the air. I am also connected to the APRS LAN
at 144.39 while I test out my DCD mod for the PK88. Running both via the
UI-VIEW. I don't think there will be any interaction between the 2. If the
DCD mode checks out as I suspect it will, then I will set the 2 meter rig up
on the 2 meter beacon net freq. later this week and try running it 24/7.

Earl in Clovis. If you see my APRS string, let me know the path it cam by.

Rendered body type: text/plain

Just got back from dinner and pulled up the map and I see the following:

KC5DUI

WD4RBX 57 at 1909. started with no strength then went to 57 at end of beacon
N1NCO
W1-PA3EUG 55 signal at 1906 local, 0300Z

The DCD mod to the PK88 appears to working great. This is a good thing as I
do not relish the idea of having to solder under that microscope again.
Tomorrow I will put the 2 meter rig on the 2 meter freq. 147.585??? is the
correct freq.???

The monsoon season has started so maybe I will change the icon to a thunder
storm!!!!

114. [propnet] BEACONet^31 - 8 July

From: "KC5DUI/Bob" <kc5dui@hotmail.com>
Date: Sat, 7 Jul 2001 21:48:24 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-22829-2001.07.07-22.09.21--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

As of about 0240Z 8 July I'm seeing a PSK31 signal in steady "idle" mode.
Has been continuing for about eight minutes now so someone's rig might be
getting a little warm. It's showing at 1490Hz on my display about 100Hz

below WD4RBX and K9ER. Never saw any ID.

Bob - KC5DUI - EM26WE

Rendered body type: text/plain

That would be me. Somehow or another PSKServ got caught in a transmit loop
sending out an idle character even though indicating in receive mode. Had
to manually force a transmit in PSKServ then back to receive to clear both
the tone and the ground on the PTT line. Real strange, will have to watch
that in the future.

73 Jeff N7YG

I should have said that I did that, too...with no difference noted.
I'll experiment a bit more and let the list know what I find out (if
anything). The good news is that PSK31srv to PSK31srv works...and
that's what we need on BEACONet^31 :o)

Hi Dan,
Don't dispair :o)  I'm at a convention this weekend, but I'll spend time
to put some *very* easy to follow instructions on the website by the end
of the week.  I'm fascinated by the restults of the PSK31srv system
myself.
```

        Cc:
        Subject: [propnet] Re: On the air

        Just got back from dinner and pulled up the map and I see the
following:

        KC5DUI
        WD4RBX 57 at 1909. started with no strength then went to 57 at
end of beacon
        N1NCO
        W1-PA3EUG 55 signal at 1906 local, 0300Z

        The DCD mod to the PK88 appears to working great. This is a
good thing as I
        do not relish the idea of having to solder under that microscope
again.
        Tomorrow I will put the 2 meter rig on the 2 meter freq.
147.585??? is the
        correct freq.???

        The monsoon season has started so maybe I will change the icon
to a thunder
        storm!!!!

        73

Jeff, I can monitor 144.39 easily and let you know the path
through San Luis Obispo to Morro Bay. Also, thanks for the
offer of help with PSK31Srv. I suspect Ed Tupis will be
making up some sort of detailed instruction. I'd prefer the
16 bit version but just can not get the three PSV1040(1,2,3)
files and the update file to load. Both Windows 95 and Win
3.11 fight all the way. 73 for now Cliff K7RR

That fully explains why I have been on for days and only a few
return reports during times when received signals are great! I
am using DIGIPAN and chasing signals plus/minus 20 hertz from
1500 hertz, decoding well I believe. Cliff K7RR

Ramon, you are coming in but no plots? I cannot for the life of me figure out why other stations are plotting you but I don, t The only difference that I can see between your beacon and the others is the format. I have been watching PSK31svr work for a good wile today and I am completely lost. I have seen 2 beacons from the same station that are copied by PSK31svr that are complete & identical one is captured and the other is not? In your case the beacons are complete but none are capture by PSK31svr

I have one question that might help me understand what is going on. In UI-View how have you set up your beacon comment? Is your grid square first?

Rich WD4RBX

Here's a list of the stations I've had in the last 24 hours (48 hours for Ev). Things have been DEAD since 2100Z without even a squeak to work on. Did check and my antenna is still UP (dipole at 15ft).

2001-July-08 23:36 8 stations

Callsign	Type	Latitude	Longitude	Km	Bearing	Last Heard (UTC)
KC5DUI*	Grid Squ.	[EM26WE]		0.0	0	Jul 08 23:33
K4DMU*	Grid Squ.	[EM78FF]		794.2	71	Jul 08 20:12
+KB2M-4*	Yagi	39.11.08N	074.45.01W	1736.8	73	Jul 08 20:06
WD4RBX*	Grid Squ.	[EM84NM]		1037.9	97	Jul 08 18:59
K9ER*	Grid Squ.	[EL06UF]		1171.9	201	Jul 08 14:08
N7YG*	Dust blwng	32.13.80N	110.50.80W	1599.0	259	Jul 08 01:13
>EUG*	Grid Squ.	[FN42KI]		2091.0	64	Jul 08 00:11
W2EV*	Grid Squ.	[FN03XD]		1577.2	56	Jul 07 00:04

Got PSK31SRV and UI-VIEW inter-operating this weekend in receive mode from
my Texas QTH. Copied WD4RBX, K4DMU, K9ER, and N7YG at various times. Now

for the transmit part.

I did not realize when we did the conference call that you were talking
about .INI files. Thought the options we covered were in software menus.
Why don't you guys that have PSK31SRV and UI-VIEW32 working properly send
me the .INI files via email? If it would help, I can post generic versions
of these to my website and people can refer to them in setting up their
BEACONet^31 stations.

Will be beaconing your way soon hopefully - I am encouraged by the results
so far.

There was an E-skip opening Sunday, 08 Jul 01 on 2m and 220mhz.

Prop path apparently began from Texas to Florida in the morning, and worked
its way north to Canada through the early afternoon.

>From Mentor, Ohio (EN91HQ) on 2m SSB, I was able to work EL17, EL29, EM20,
EM10, EM00, and heard EM04. Many other VHF'ers in Ohio worked many stations
into Texas, and several stations in Canada were able to work into Texas as
well. It was a great event !! Texas had it best being able to work into
Florida and then follow the E-skip north into Canada throughout the day.

I'm in the process of setting-up UI-View (didn't see any activity on
147.585) but I only have an attic ringo for 2m packet use, soon to be
replaced with higher and better aluminum.

How many in the group are into VHF propagation and what means are you using
to monitor conditions ? Is UI-View used in any mode for this purpose ? It
seems that not many may be actively pursuing the 2m angle however I have
close to zero experience with UI-View and/or APRS. One last one, How many
of you had a heads-up on the E-skip event via UI-View or APRS ?

Thanks,

Brad, N8GLS

My 147.585 was squakin every 5 minutes frome here in [EN74HD] but I've
no reports of anyone hearing it yet. It's 50w to a pair of stacked
squalos just 1/2 mile from the highest point in the lower peninsula of
MI - a marvelous view to the south. Another member from here is sending
me a rom upgrade for my TNC so then I'll be able to view other BEACONet
sigs heard from here. For now, the signal is there for others to use.

Hi All

I am having trouble keeping my station on the air do to violent thunder
storms. Beyond that Ramon is flat blasting in here but I cannot get a plot on
him in UI-View. I forced a plot by high lighting his beacon and pasting it
into the window at the top left of PSK31svr and clicking "send to client"
Bingo had a plot. The portion of his beacon that I copied and pasted in the
window is underlined. If any one can tell me what I have setup wrong I
certainly would love to hear from you.

Sorry Mark, but EN74 from EN91 is quite a haul for FM and the aluminum I
have as well as height (not a problem with SSB, an everyday event). Since
my main op mode is 2M SSB, I only have a 4 element yagi off the chimney (for
local FM and repeater use) and a ringo in the attic (for local packet
clusters). I replaced all the "higher" FM antennas many years ago when SSB
really got, and kept, my interest. On SSB I do have an 18 element boomer at
65ft, with mast mounted preamp and 300W out, but sadly the antenna is VERY
narrow bandwidth and exhibits negative gain above 145Mhz, it won't even pass
the local repeaters (hi). Also note its only 650Ft ASL here.....yup, a
BIG hole right on the shores of Lake Erie.

I really believe the prop monitoring advantages with APRS/Ui-View are
intriguing for 2M SSB conditions. I'll keep the 4-el yagi pointed at you
and will let you know when conditions are cooperating. I'm somewhat
disappointed that I don't hear anything local on 147.585, again probably the
antenna dilemma, as well as few users. Good luck with the ROM upgrade.

139. [propnet] Re: Think I need help BEACOnet^31

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Mon, 09 Jul 2001 19:37:50 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-23160-2001.07.09-19.02.05--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Rich,
You don't mention if you were successful with decoding any other
stations, but I can address the inability to plot Ramon's easily:

> a EACONet w1/pa3eug/b [FN42KI]
> W1-PA3EUG>HY0F0A:[FN42KI] - pa3eug@amsat.org w1/pa3eug/b
>
>   w1/pa3eug/b [FN42KI]
> W1-PA3EUG>HY0F0A:[FN42KI] - pa3eug@amsat.org w1/pa3eug/b

> î

Remember, PSK31srv will simply send what it hears to UI-View. UI-View
will then compare what it gets to what it knows to be a valid AX.25
packet. If it is not, then it discards it.

W1-PA3EUG is not a valid AX.25 callsign. Ramon, try removing everything
in front of pa2eug and let's see if you are then "plottable".

Ev, W2EV
ps...excellent idea putting the w1/ in your "startup" text, by the way!

140. [propnet] BEACONet^31: Assemble frames correctly, please

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Mon, 09 Jul 2001 19:52:05 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-23162-2001.07.09-19.15.00--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Just as so many folks have pointed out, the "startup text" should be at
least 15 characters long. I place "http://go.to/BEACONet" in mine.

The next part is the important part: make sure that the remaining text
fully conforms to AX.25 convention. While you're at it, make sure that
you include the BEACONet configuration code...**it really helps** when
analyzing the path.

Example:
http://go.to/BEACONet
W2EV>HY0G02:[FN03XD] w2ev@arrl.net

NOTES: Send all 6-characters of your gridsquare. UI-View does not
support 4-character grid decoding!

To maximize the opportunity for showing up as an icon, simply repeat the
AX.25-portion of the transmission:

Example:
http://go.to/BEACONet
W2EV>HY0G02:[FN03XD] W2EV>CQ:[FN03XD] W2EV>CQ:[FN03XD]

The above will give you three chances per transmission to get an icon on
someone elses screen.

Since BEACONet is so free-form, it is easy to experiment with other
formats, etc. Please...excersize a certain amount of restraint. If we
all use the same protocol, we stand better chance for more global
success, and it is less confusing to newcomers as they see fewer
variations.

Ev, W2EV

Yes, there was Es reported at this time. Once again, though...the
advantage is because of having digipeaters at altitude. Thanks for
sharing!

Anybody ready to start setting up some Hubs at altitude? ;-)

Sadly, we're victims of "show me results today or I'll go away" syndrome on 2-meters. :o(The value of BEACONet is in setting up and monitoring over long periods of time.

It is also interesting to note that the geography covered by an Es opening narrows as the frequency increases. Es on 10 meters could link areas as large as six or eight states together. Es on 6-meters may link areas as large as a couple of states together. Es on 2-meters will often link areas as big as several grid squares together (and often not even that big). Until we can get a truly nation wide "blanket" of participants, we probably won't see widespread success of 2-meter BEACONet for propagation monitoring. (rover tracking is another story...for another day).

As for this:
> One last one, How many
> of you had a heads-up on the E-skip event via UI-View or APRS ?

Actually, a variation of this has happened a few times: BEACONet has been used to verify an event. I saw a note from someone who mentioned that they worked some 600 miles on a path that is normally not available to them on 2-meters. Signals came on strong, then slowly faded. They wondered what the mode of propagation was. I checked my BEACONet screen and noticed that I got a single reception of a station that intersected the midpoint of the same path. Probably a meteor burst. (people were conjecturing airplane scatter). I am well out of range of any airport that could have made that a possibility.

BEACONet gets better as more people participate. 10-meters has good participation. Join us there for a while, to get your feet wet. Then establish a good station on 2-meters and let it run for a while. See what you get. :o)

Welcome aboard!

Message-ID: <LYR1548-23169-2001.07.09-19.47.29--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Thanks Ev,

I certainly see an advantage here. I figured, even being new to this mode,
that participation was low on the 2M end, and your right, the "don't see it
now.....goodbye" syndrome is certainly a topic, albeit for another type of
newsgroup. I will certainly get into the ten meter aspect as I get
seriously set-up here, and then, on to 2M......a saying from one of my
favorite movies - "Field of Dreams"......if you build it, they will come.
Your right on the money with the rover aspect, boy, a whole lot of
conversation could be generated from that one word.

73, de Brad N8GLS

Hi Ev
Thank you for helping. Yes, I have decoded and plotted many stations via
PSK31svr. In fact looking back in UI-path data file Ramon has been decoded by
my station in the past. Here is a copy and paste of the main RX window in
PSK31svr about an hour ago. Bob (KC5DUI) plotted but Ramon did not. PSK31svr
V1.08, UI-View V1.57
I should mention that other stations are plotting Ramon.
Thanks
Rich WD4RBX

147. [propnet] Beaconet^31 setup files... finally :-)

From: Ramon Kolb <ramon.kolb@usa.net>
Date: 9 Jul 2001 20:54:23 EDT
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-23173-2001.07.09-20.15.13--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi folks

as I promised so often, but until now did not send: here is my actual setup.
This is MY setup, it works for me. Use it at your own risk. I *have* been
experimenting with the format of the message, to figure out what is the most
efficient way of communicating. And I will continue to do so until I find the
beacon text string that suits me most :-) (Sorry Ev... you may not agree
:-)).
One word about the contents of the uiview.ini file: I am running a beacon in
my status text saying when I will be off the air. You probably don't want to
send *any* status text. You can do this by setting STATUS_INTERVAL=0 in this
file.

For all completeness, I am running UIVIEW16 V2.36 and PSK31Srv 1.08.

Good luck with the files, hope they help!

--Ramon W1/PA3EUG/B Boston, MA [FN42KI]

148. [propnet] W1/PA3EUG/B will be off the air

From: Ramon Kolb <ramon.kolb@usa.net>
Date: 9 Jul 2001 21:01:57 EDT
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-23175-2001.07.09-20.22.58--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi folks,

tomorrow I'll be going again to Europe, and I won't be back until July 23. My beacon will be off the air for this period, starting July 10, 16:00 UTC. I will regularly read mail until July 16, and then probably not until July 23.

(Some background info: this time it's not for work... I got married in Lima, Peru last January [that's where my wife is from originally, but she's been in the States for longer than I have :-)], and to please those people that couldn't attend, we'll have another ceremony back home in Heerlen, Netherlands [JO30AV]. After that, we'll be on a "second" honeymoon to Venice for almost a week. Back in Boston on the 23rd...)

73,

Ramon W1/PA3EUG, Boston, MA [FN42KI]

The only thing I changed was to set my callsign to W1-PA3EUG. My own "loopback
(PSK31SRV reporting my call to UIVIEW/HF reporting my call to UIVIEW/2mAPRS
works fine...).

I changed my callsign back to "PA3EUG" and put the complete legal ID in the
preamble... Copy me now? :-)

155. [propnet] BEACONet^31 28.131 - 9 July Wrapup

From: "KC5DUI/Bob" <kc5dui@hotmail.com>
Date: Mon, 9 Jul 2001 21:46:41 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-23196-2001.07.09-22.07.42--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Here's my final tally from UI-Path for 9 July:

CALL - Time(UTC)/# plots listed

KB2M-4 - 1400Z/4 - 1500Z/9 - 1600Z/9 - 1700Z/11 - 1800Z/7 - 1900Z/9 - 2000Z/10 - 2100Z/4

W1-PA3EUG - 1600Z/2 - 1700Z/1

Starting out for 10 July:

KB2M-4 - 0100Z/1

WD4RBX - 0000Z/3 - 0100Z/7 - 0200Z/6

Noted that Rich was unable to plot Ramon until he changed his call format but my system seemed to have no trouble with it. (UI-View32 V1.61 and PSK31Srv V1.08). When plotting Rich (WD4RBX) UI-Path will count two hits if I get solid copy on both instances of his CALL and GR##ID while UI-View shows them in quick succession. If the second call shows a "garble" but is still recognized as valid it will appear on the map and in UI-Path as separate entity.

Bob - KC5DUI - EM26WE

For those of us using the AGWPE when running soundcard packet George is working on the 300 baud version plus says he has a tuning indicator and other goodies coming along!

156. [propnet] UI-Path

Rendered body type: text/plain

Here lately I have been getting some runtime error message from UI-path.
has anyone else got these and any idea what the problem is. Using UIView32
and PSKServ 1.08.

Next Item and a bit off topic: I need a formula to compute a Latitude and
Longitude give the following:

Start latitude and longitude
True Heading in degrees (0- 359.999)
Distance in feet.

I have a bearing distance program , but it has been years since I've been in
an algebra/trig class and I am a bit rusty when it comes to converting
formulas.

Thanks

Jeff N7YG

Hi Jeff,

Have been seeing you on my map on a regular basis. Hope we can keep going.

PSK31Srv V1.08 can be found on http://www.go.to/BEACONet under TurboLinks
and PSK31 on the left side. Depending on which version of UI-View you are
running there are two different sections.

Hope this helps.

Hi Jeff,

I'm running UI-View32 V1.61, UI-Path and PSK31Srv V1.08 and have had some
errors when trying to "highlight" items on the Transmissions Table screen.
Usually, UI-Path shuts down but everything else seems to keep working. As a
precaution I then shut everything down and reboot. Thought it was something
I was doing (usually have lots of things running at the same time -
UI-View32, UI-Path, PSK31Srv, SETI, OutLook Express, Internet Explorer,
etc.). Will watch more carefully the next time I have an error and will let
you know.

Haven't gotten a complete transmission on you since you switched to the
Thunderstorm icon but have enough pieces to know it is you.

Thanks Bob for the info on 1.08.. I should also at this time post my
schedule of operation. I'm usually on the air from when I get home after
work, interrupted by working digital Satellites unattended, and working HF
intermitly through the evening. I point my 3 element beam randomly. Last
night it was 325 degrees. Anyone wishing to try a contact with me , let me
know I will point beam in your direction. I also have a big (full wave on
160m)wire dipole opened up about 45 degrees , good east west. I run an 847
100 watts max in this mode, I show about 25 watts out on power meter.

Hi all. After seeing some notes from Ramon and Ev, I've changed my text
to what I believe is similar allowing, I hope, my call to be printed...
 K7RR>HY0F03-15:[CM95ni] k7rr@arrl.net (UTC time, UTC date, CR, line feed)

.............any comments you might have welcome......
     Presently, I am printing WD4RBX but at an audio tone of 1666 hertz!
Rich this is the same tone we used for a QSO a few days ago but seems 170
hertz higher than the "average" of the others. I'm transmitting on what I
believe is a tone of 1485.5 hertz, about in the middle of the pack.
     Beacons coming in are: VE7, XE1 on 28200 and a very loud beacon on
28288.25 signing WA7LNW/BCN DM37 Hurricane, UT near Zion National Park 5 W
loop ant QSL WA7LNW at infowest.com

Hi Cliff

I have my AF TX set at 1430Hz The other guys are all close to my audio freq.
My scan is set to 100 Hz & Ramon and Bob have been RXed today. If my AF was
1666 Hz (AF RX FREQ is set close to that) then I would not have RXed them.
Well, out of my scan range. I thing what has come into play is the sound card
difference. I think that if you set your audio TX freq to mine and your RX
freq to the same (or close) you will see good results. Just my opinion. I
just went back into the shack to check where my AF RX was set and found that
I had a major crash and burn. The whole system crashed and I am now
rebooting.

Something is a little strange - I get a solid copy in UI-View (32) on Ramon
about every second transmission - When he was using the -. Now we are only
about 18 miles apart, so he is a strong signal here. Mabe it has something

to do with signal strength as well as format?

By the way, Good Luck Ramon - hope the ceremony gors well and enjoy
Venice.

Hi Rich and Cliff,

I have my TX and RX set at 1575Hz - over the weekend when I was set at 1500Hz (according to my rig and soundcard combo) "most" everyone seemed to be higher so I moved up (WD4RBX was at 1599, K9ER at 1588, W1/PA3EUG at 1554 and N7YG at 1492). Without being here to check the actual incoming display can't say where everyone was at today but received 6 hits on KB2M-4 and 11 on WD4RBX so they both should be within +/- 100Hz of my 1575Hz. Have some yard work to do so will be gone again for a bit but will try to watch the display later on IF anything is happening and try to see how things match up. Once we get a "feel" for where others show on our display we should be able to get a general idea of who is low and high. Guess if we had someone able to get an extremely accurate setting we could use them as the "frequency standard" and the rest of us could pick the proper offset and stay in synch.

I do believe that you are right. We will have to work out something because of the difference in sound cards. Here is my vote. Looks to me like you (Bob KC5DUI) are heard by many of us. What you all think if we center on Bob and report what Audio freq we see for him and go from there?

I took everything down and did the 3-fingered salute to WinBlows and it appears that UI-Path is running better. I believe I may have had too many processes (for UI-path) running at the time I originally received the runtime error. At that time I had UiView, PSKServ, UI-Path, Outlook Express, Delphi and a project I am working on that is really math intensive.

I never rebooted, just restarted UI-path.

I am centered on 1500 Hz and I seem to be getting every one around +_ 50 Hz
of this freq. The reason I was a little high in freq. the other day was
because the tuning knob on the FT-920 got bumped and I was actually sitting
at 28.131090 MHz.

BTW, W5IUA, you are booming into Tucson at the preset moment, 0124Z.

KB2M, I just plotted you at 1659HZ from 28.131

Later

Let's be sure to use the scanning feature of PSK31srv to it's fullest
advantage. The idea isn't to all get on the same frequency, as much as
to make sure that PSK31srv's scanning feature can find and lock-on to
our signals without having a huge (or otherwise valueless) preamble
text.

We're doing well with the number of participants that we have on-board
right now...but lets look to the future. What if we have 10 times the
transmitters? We will need to spread out a bit in order to assure an
adequate opportunity to decode.

Additionally, there is a "secondary lesson" to learn (one for which we
are gathering useful data right now). That is this: "Can two stations,
who can't normally hear eachother, simply dial-up and start operating
unattended, and be sufficiently within scanning range so as to be
mutually decodable if/when the band opens?"

Why? Because it is the intention of several stations on both sides of
the Atlantic to attempt to run 24/7/365 BEACONet^31 stations on 2-meter

SSB (!) with the intent of being the first to make a documentable
contact across the ocean. Given that transceivers are probably more
unstable at 2-meters than they are at 10-meters, we really need to
figure out just how "wide" we can be spread apart and yet still be able
to reliably decode eachother.

Our tests on 10-meters are setting the stage for making Amateur Radio
history on 2-meters. (are you guys proud, yet?) And yes...expect that
I'll be writing up a little something for publication on both sides of
the Atlantic when we finally figure this all out. Expect me to name
names. :o))

Hi Rich,

According to my display I'm on 1575Hz for TX and 1600 for RX - rig has not been powered off for about a week so it should be fairly well warmed up by this time :-) and hope the soundcard doesn't change too much. I'm still printing Ev (around 1540-1550Hz) but haven't seen anything print from you since 0148Z.
  KB2M-4 just plotted out nicely at 0213Z and a tone of 1682Hz - saw a message from N7YG where he plotted KB2M-4 at 1659Hz so he might be a little high. Looking at the the PSK31Srv screen I can see a couple partials on N7YG but nothing complete enough for a plot.

Will watch a bit longer.

Bob - KC5DUI - EM26WE

My vote is to see what freq (audio) you are on and work out a base line from

Rendered body type: text/plain

Bob's messages have gotten me thinking (good going, Bob! <g>). What we
need to do is all follow the same procedure and then do some measuring
and documenting. For instance, how about this:

* Everyone place their TX on +1500, with an Interval of between
  3.00 and 6.00 minutes (yes, out to two decimal places to assure
  "random" settings)
* Everyone tune to 28.131.00 USB
  - How do you do that? Easy, if you have a digital readout.
    Tune slowly from 28.130.99, until the readout "just" flips
    over to 28.131.00, then "lock" your dial (if you can)
  - Once set...DO NOT RESET IT (see next item)
* Over a period of *many* days, each of us keep a written log of
  who we hear, and their AF reading on our individual waterfall
  displays. Why? To determine how much we drift over time.
  - The log should look like this (no one left off intentionally):
    Day = 1   Day=2 Day=3 Day=4
    WD4RBX +1544 +1550 +1554
    KC5DUI +1520 +1535 +1512
    W2EV   +1560   +1553
    N1NCO   +1490 +1501 +1508
    N2VRJ   +1500 +1550 +1555
    K7RR   +1552 +1560

It would be interesting to know when or *if* things ever stabalize...or
if they even have a stability "problem" in the first place.

Frankly, I'd like to wait to run this trial until Ramon gets back, to
assure we have alot of usable data...but there may be no reason to wait,
other than that.

What say?

Ev, W2EV

Rendered body type: text/plain

Hi Ev,
   Can see that with the scanning feature set to +/-100Hz there is plenty of room for us to spread out but we need to be sure that we're all inside that 200Hz window when propagation takes a turn for the better/worse. We also need to make sure that noone checks the TX=RX block otherwise they can jump completely out of range due to QRM/QRN attracting their scan.

  I'm normally able to lock on to your signal (nice and clean and strong) automatically about the time you get out the "GO." but sometimes it's after the "CONET" before I'm in synch. Have a couple instance where the scan has already stopped close to where a signal pops up and then doesn't lock on for several seconds and misses something important like the callsign - am playing with the Scan Delay settings trying to find the optimal values. When you see me on the PSK31Srv have you been able to note my audio frequency? I've got it set at 1575Hz as I seemed to be low compared to everyone else.

  This is all your fault that I've become so "addicted" to BEACONet that I haven't used my rig for anything else in a number of months ;-}   My family can't understand why I get so excited seeing a call pop up on the map.

Bob - KC5DUI - EM26WE

Let's be sure to use the scanning feature of PSK31srv to it's fullest
advantage. The idea isn't to all get on the same frequency, as much as
to make sure that PSK31srv's scanning feature can find and lock-on to

Hi Ev,

Sounds like a good idea and I'm willing to "play" when I'm not at work (for a "coordinated" effort a weekend might be the best). Would be interesting to see what several stations see as my audio frequency on the waterfall during the same time period. With a little data we should each be able to calibrate our systems and make sure we're within the 200Hz window while not sitting on top of each other. If the website published a list of calls with their associated audio frequencies then stations just joining in would be able to "calibrate" their systems according to the station/stations they can copy at the time and stay in the 200Hz range.

More fun all the time!!!

Bob - KC5DUI - EM26WE

Message-ID: <LYR1548-23548-2001.07.11-09.35.58--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Don't know how many BEACONet^31 ops have the capability or are interested, but for those who can beacon on 28.131 and operate 20, 17, or 15 meter SSB at the same time, how about a default frequency for discussing BEACONet^31 details on the air? I like Ev's Frequency Baselining proposal, but we could do some real time comparisions also.

Proposed frequencies:
21.431 (15 meters)
18.131 (17 meters)
14.331 (20 meters, don't know if there's a net here already)

Suggest we not use all these, but pick a primary and backup.

Any interest? Other ideas?

This morning starting at about 1800 UTC, Rich, WD4RBX started coming in.
Again I read you at a tone of 1666 Hertz, so for at least today, I will
listen on whatever frequency that is and reply similarly. Your CW ID is
quite readable. You seem to be printing the others while I see only you
most of the time. We need to be sure you are transmitting and receiving
on the same audio tone frequency as well as RF frequency to be sure that
factor does not complicate things. I read Ramon at a tone of 1980 Hertz!
     I did not reply to yesterdays thoughts of how to get on the same
channel but at the very least this requires we stay to engineering
parameters rather than simply group on one successful station. At least
for now Rich, I'll be glad to work from a position of success by operating
on your channel. The engineering can come later. Cliff K7RR

The radio I'm setting up for the 135cm portion of my BEACONet array is
only 10w. I have a 5/8 wave vertical antenna right now. I also have
coming a 4el quad for this band.

Do you guys think I should run that beam instead, and if so, in what
direction should I aim it? Being this far north, I tend towards beaming
south, but ? ? ?

Mark KB8GC [EN74HD]

P.S. - Worked Surinam (sp?) and Puerto Rico on 6m Monday evening. Great opening, too bad I don't yet have my 6m BEACONet running yet - sorry.

Hi Cliff

I feel that Ev is right. The whole idea of BEACOnet is tune and play. The plan to set our RX & TX AF to 1500 Hz also rig dial to 28.131.00 is a winner. I lost sight if the fact that we are a group of experimenters and as you know not all experiments are successful but useful data is collected. I am afraid that ounce I set my AF to 1500 HZ Ill be well out of scanning range. I am set to 1450 Hz now and being seen at 1660. I will be setting my TX & RX to 1500 later today and will start collecting useful data that the group can use to further enhance BEACOnet^31 success.

Hi Mark,
(I can't believe I'm saying this, but here goes) Setting up a Hub on
223.780 MHz will probably be an uneventful experience. The *only* time
that I've known the frequency to be in use is a few times during meteor
showers (using Meteor Mode...makes sense, huh? <g>).

That having been said, you may be better off with a small beam, aimed at
either me (FN03) or someone in the Southeast...during the upcoming
Perseids meteor shower. With 10watts, I seriously doubt that you have
much chance of being heard by others...but you may very well be on the
receiving end of the first BEACONet meteor contact on that band (and
when that happens, it will also be the highest documented frequency for
an FM based meteor contact -- a record now held by BEACONet on 147.585
MHz, btw).

Cool idea, but I'm either on 28.131 or another frequency, but not both.
Don't let that deter the effort though. It's interesting.

Rendered body type: text/plain

Hi all

I am going to set my AF to 1500 Hz tonight at 1:00 UTC. Scan will be set to 200 Hz.
So if I disappear you all will know what happened. I went back to work this morning after a 9 day vacation and won't have another day off till Sunday so I won't be able to collect much data till then. Hummm Hide and go BEACOnet anyone? I think that this is going to be a very interesting experiment!

On another note. I found that when I set UI-View TX time to 5 min I was TXing about ounce every min. I set my TX time to 10 Min and it looks like I am TXing about every 2.5 min. Has any one else found this to be true?

Hi Rick. You latest list of heard stations just came in but I am replying to the earlier message. I really can not understand why you are not printing me after the changes made this morning. I am setting my transmit frequency atop yours regardless of the audio tone. You should have printed it without effort. Even your change to 1500 hertz is just fine just as long as I can see you one time and calibrate on it. This usually occurs around 1600 UTC. Let's try tomorrow morning. If there is any way of checking that the receive and the transmit tones are identical, that would be very useful. I'm using a counter to check my gear.
     I wasted another entire day trying to get UI-VIEW going, both the 32 bit and the 16 bit version. My view is if we can not do any better than this piece of garbage, lets go back to to DIGIPAN and be hams again using decent test equipment rather than digital abortions!   Cliff K7RR

192. [propnet] BEACONet^31 - 11 July

From: "KC5DUI/Bob" <kc5dui@hotmail.com>
Date: Wed, 11 Jul 2001 19:55:00 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-23657-2001.07.11-20.16.02--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi Rich,

Here's my Report for July 11 on 28.131.

2001-July-11 19:41 9 stations (CDT)

Callsign	Type	Latitude	Longitude	Km	Bearing	Last Heard (CDT)
KC5DUI*	Grid Squ.	[EM26WE]		0.0	0	Jul 11 19:40
WD4RBX*	Grid Squ.	[EM84NM]		1037.9	97	Jul 11 19:38
+KB2M-4*	Yagi	39.11.08N	074.45.01W	1736.8	73	Jul 11 19:37
W2EV*	Grid Squ.	[FN03XD]		1577.2	56	Jul 11 13:37

I'm currently printing you at 1644Hz and KB2M-4 at 1578Hz. I've still got my TX and RX set to 1575Hz as otherwise you'd be outside my scan window. When I had W2EV earlier this afternoon he was at about 1527Hz.

Will be going off the air about 0300Z due to forecast of thunderstorms for the next couple days and I need "to be prepared." Will post a message when I come back on line.

Rendered body type: text/plain

Rich,

Now that you've adjusted your audio freq to 1500Hz I'm showing you at 1695Hz. Have adjusted my scan width to 150Hz and still centered on 1575Hz. KB2M-4 still (but weak) coming in at 1578Hz.

By the way I'm reading the freq off the top of the waterfall display - if I click on a signal and read it in the RX window it varies by 4-5Hz depending I guess on the direction of the last move the scan made.

Funny you should ask. I wanted to see what was going to happen after I change AF to 1500 and scan to 200Hz. During the time I sat there I RXed 3 of your beacons. The first is before I switched. 1430,1385,1395 I didn't want to report this finding till I had more time to observe your beacon.

This is the first time I've heard of this symptom. When in Meteor Mode, we used to have a problem in which buffers of some older TNC's weren't large enough to take the whole 15-seconds of TX...and another "buglet" in which this would occur even in TNC's with large enough buffer space...but the work around was to simply open a terminal window. Roger has fixed that, to my knowledge, though.

I'd suggest a reboot of your computer and fresh restart of your system and see if/what impact that has. I've noticed on my WindowsME-based computer that System Resources drop quickly...and UI-View/PSK31srv start acting funny (a function of the OS' resources).

Just a thought :o)

Hi Ev

You are absolutely right. I had a major windows crash and burn the other day. I had to manually shut down Win95 (the computer). I did not pay any attention to the beacon timing after the reboot. I timed the beacon and it is now TXing at 10 min. Maybe it would be a good idea to a restart every so often sort of maintenance program?

> I wasted another entire day trying to get UI-VIEW
> going, both the 32 bit and the 16 bit version.

Cliff,
"I feel your pain". :o) That is why I stayed on AX.25 for as long as I did...it worked quite simply. I found a very simple problem with a setup parameter that made everything OK on ^31, though. Don't dispair...I'm actively working on the website instructions (step-by-step) to make things easier for folks. I'm on target to have them completed by the weekend.

There is even a suprise in there from Roger. :o) [I hate it when people leave me hanging <g>...so I won't]. He's repackaged 1.08 into a single version...no more need to download and then upgrade. THANKS, ROGER!

:o) The full-version will be posted to the BEACONet website for all to have.

In the mean time...may I suggest an experiment for you? I've heard hints that there are PSK31 programs out there that will decode multiple streams at the same time. There appears to be two such programs at: http://www.psk31.com/Software/software.htm (one which appears to be using a new DLL). Given the issues that seem to be surfacing with BEACONet^31, I'm starting to think that such a system would "do better", given the lack of need of a "timeslot wasting" preamble? I wonder if you would mind downloading one or two of these programs and reporting on their success to us? Given Roger's no longer developing PSK31srv, if we find someone with a cool product like that, maybe we can convince them to add a "UI-View" hook to their system.

Of course, it's up to you...but it would be interesting to explore more deeply.

Hang in there, help is on the way. :o)

Ev, W2EV

Thanks to Joe, K4DMU, who kindly sent a spare upgrade rom for my ancient TNC, I now run in kiss mode, so have changed from VK0 to VK1 etc. Now at last I'll have little icons on my map if my station hears another.

I plugged in the ROM, did a hard reset, and voila, the TNC talks KISS mode, so UIview works correctly now.

Now as soon as I figure out the AEA PK-232 units interface to my radios, I'll get 6m and 135cm up next.

202. [propnet] UI-Path Crash Errors

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Thu, 12 Jul 2001 15:45:31 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-23836-2001.07.12-18.06.03--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I believe I have solved my crashing problem with UI-Path.

Solution: Remove UI-Path using the Add/Remove Programs option in the Control panel. When it ask you to remove any shared components answer 'Yes to All'. This will remove not only the UI_path programs but also some of the shared VB stuff that was added to the Windows directory. Note: This is important!!!

Next, remove the directory that UI-Path was installed in, normally Program Files\UI-Path, and any residue file the uninstall did not remove.

Reboot the Korn-fuzer and reinstall UI-Path. So far this seems to have fixed my problem.

The error message Runtime Error 5, invalid procedure call normally results from VB's failure to call a procedure correctly in an external DLL file. I suspect somewhere along the line I upgraded a program that overwrote one of the shared DLL files that was installed by UI-Path.

So, back on the air and will try and get a weeks worth of plots and publish the results from UI-Path. 10 Meters appears to be opening around 2300-0000Z, at least in the neck of the woods.

Anyone willing to give the BEACONet^31 instructions a "dry run"? I'm
sure I've left something out...I completed in the wee hours of this
morning.

http://go.to/BEACONet | Construction | BEACONet+PSK31=BEACONet^31
to get all of the software

http://go.to/BEACONet | Configuration | BEACONet^31
to get the configuration down

Ideally, it would be good to absolutly delete PSK31srv and reinstall
everything by the website. I'll take any feedback you have, though.

Try at own risk :o) and give me feedback, please.

Went to the site and checked my configuration and discovered a few things I
had set incorrectly.

Ev, you might want to expand on some of the different settings as some may
not be setting up a new installation. What you might assume to be a default
setting, may not be a defaults setting with someone who has been using this
system for a few months.

I have not plotted one single signal on 10 meters today. In fact I tuned up
and down the band looking for maybe so CW beacons of a few die hard
10-10'ers and quite as a church mouse.

I'll incorporate them during my next edit, as hyperlinked screenshots of
the UI-View configuration window. :o)

> I have not plotted one single signal on 10 meters today.  In
> fact I tuned up and down the band looking for maybe so CW
> beacons of a few die hard 10-10'ers and quite as a church mouse.

Ya know...after being off the air for a couple of days (I did a full
delete of PSK31srv and reinstall from the website and instructions...and
had to stop half-way to actually get some sleep <g>) I thought I did
something wrong because I didn't have any plotz <sic> either.  Just
before uninstalling and reinstalling, I decided to do a scan, too...and
found the band quite dead. :o))

I forget my own philosophy, too: sometimes receiving nothing is a
successful lesson learned. :o)

Could someone advise as to why we do not
see any Mexican packet stations on either
146.390 mh or 147.585 mh.   The Mexican
stations certainly are very active in this area
on 2 meter voice repeaters.   Are the Mexican
stations not permitted to use "beacon" types
of communications?

As of about 0020Z 14 July the storms seem to have moved out of the area (had
about 1.5 inches of rain early this morning) so I'm back up on PSK31Srv. Am
still centered on 1575Hz and will watch for a bit to see if I need to
adjust.

W2EV just popped in at 0023Z and was showing about 1500Hz on my screen! How
copy Ev?

Hi Ev,

Since your signal is coming in so nicely decided to try an experiment.
Have moved my TX down to 1500Hz and was wondering how close it matches up
with yours. Have also knocked my Scan 2 (how soon the scan can move after
stopping I think) time down to 1 second and it moves more quickly to find
your signal but will have to see how reliable it is.

Just received WD4RBX on 1668Hz and he's printing nicely too. Will have to
see if the audio freqs change as my rig warms up - started from a "cold"
start at 0020Z.

Rendered body type: text/plain

Hi again Ev,

Hope you don't get tired of all my e-mail! Just saw a good example of the benefit of a "decent" length preamble. My system was copying WD4RBX and before his transmission finished I saw/heard you start up. When Rich finished, PSK31Srv scanned down to you and locked on in time to get your call and GR##ID!

Don't know if you remember me mentioning that I'd seen my system wait to start transmitting until the signal being copied had ended. I finally figured out that the USE_DCD=True in the PSK31Srv.ini file is what handles that. Everyone else probably realized it already but I didn't remember reading that in the help file until I started looking the ini file over more carefully.

Don't know if it helps your copy out or not but I think having an "extra" DE CALL [GR##ID] in the text helps me get more reliable copy. Just watched a beacon from WD4RBX and could hear the static pop as his initial call came through and received a graphic character as part of his call. Signal was cleaner by the time the second DE CALL and [GR##ID] came through so got a valid plot.

As someone mentioned during our conference call, I don't think the CRC is really of much value at this point. Even though both you and Rich have nice signals on my display only rarely do I get a 100% printout. Quite often a little graphic pops in but if the CALL and [GR##ID] are ok I get a plot which I don't think would happen if we were all using add and validate CRC. Plus, adding the CRC makes the transmission just that much longer as does the UI-View Tag - turned mine off after the conference call.

Last item for this message. Don't know if you read the thread on the UI-View list about having different VBS files to start up UI-View32. I have one for Packet, one for PSK31 and one for Meteor Mode. Makes it much easier to get going without having to make changes for the different formats (don't know if this works with UI-View16 or not).

Bob - KC5DUI

P.S. I think my rig changes frequency a bit as it warms up - after just over an hour of running I now have you at 1538Hz and Rich at 1691Hz. Unless you two are trying confuse me (not too hard to do these days) by slowly changing your freq.

Hi Rich,

When did you move? Just got a real nice plot on you that took a slight zap
and got a GR##ID of [IM84NM]!! Had to switch to the World Map to see that
you are now on the south shore of the Mediterranean. Didn't realize
teleportation was one of your specialties.

If you are monitoring the rig could you let me know where you see me in
relation to Ev if you can see him. I'm showing you at 1691Hz and Ev at
1538Hz. I'm supposedly TX on 1500Hz but have watched you and Ev slide up a
bit as my rig warmed up. Has been stable now for over half an hour so maybe
I'll be able to figure out where I really TX.

If you get the thunderstorm that came through here this morning be ready for
some good lightning/thunder. We ended up with about 1.5 inches of rain but
a town about 30 miles away had nothing but the thunder.

Thanks,

Bob - KC5DUI

Hi Rich,

Boy you are quick on the reply!! I had just hit the Send button when I got
your message below. Seems like you knew what I was going to ask before I
did it. I think your beam is helping out a bit - I'm running just about a
steady 25 watts to my dipole and glad you can copy me.

>From what you were seeing, I think my rig does drop a bit in frequency as it
warms up. You and Ev have both moved up as I see you while I've gone lower
as you see it. Will have to see what is showing tomorrow. Thanks for the
"quick" reply.

Last plot on you was 0141Z and on Ev 0133Z - maybe the band is "closing" on
me.

Bob - KC5DUI

Hi, Ev,

Of course I meant 144.390 mh!

If there were Mexican stations working
either APRS or BEACONet in the
Baja area, I would
certainly expect to "see" them since
their voice activity on 2 meters is
extremely strong at this QTH.

Regards,

Ed W3NRG

kc5dui@hotmail.com writes:

> Will have to see what is showing tomorrow.

Hi Bob
I will be off from work Sunday and have a couple of experiments I plan to
run. My equipment should (haven't seen a WX report yet) have been running for
at least 24 hours.

PS. I have known for many years that if I want to be on 28.131 I should set
my dial to 28.130.98. For the BEACOnet tune and play I have set dial to
28.131.

Rendered body type: text/plain

KF0ZH>APR819,WA5IHL-11*,WIDE2:@140959z4447.01N/09329.48W_237/000g000t063r000
p000....h74b10187dU2k
886 miles -- I got a total of 16 of these packets last night!

KF0ZH>APR819,WA5IHL-11*,WIDE2:@140959z4447.01N/09329.48W_237/000g000t063r000
p000....h74b10187dU2k
911 miles

The REAL kicker is the following group of packets:

K1PIG>APW249,WA5IHL-11*,WIDE3-1:>130851 Augusta Maine Gateway (10.151 -
144.390)
K1PIG>APW249,WA5IHL-11*,WIDE3-1:>130851 Augusta Maine Gateway (10.151 -
144.390)
K1PIG>APW249,WA5IHL-11*,WIDE3-1:Gateway (10.151) -MEKENKENTS HI-249-<530>
K1PIG>APW249,WA5IHL-11*,WIDE3-1:Gateway (10.151) -MEKENKENTS HI-249-<530>
K1PIG>APW249,KD5JTM-4*,WIDE3-2:_07140950c283s000g000t057r000p000P000h97b0989
0wRSW
K1PIG>APW249,KD5JTM-4*,WIDE3-2:_07140950c283s000g000t057r000p000P000h97b0989
0wRSW
K1PIG>APW249,WA5IHL-11*,WIDE3-1:_07140950c283s000g000t057r000p000P000h97b098
90wRSW
K1PIG>APW249,WA5IHL-11*,WIDE3-1:_07140950c283s000g000t057r000p000P000h97b098
90wRSW
K1PIG>APW249,WA5IHL-11*,WIDE3-1:Gateway (10.151) -MEKENKENTS HI-249-<530>
K1PIG>APW249,WA5IHL-11*,WIDE3-1:Gateway (10.151) -MEKENKENTS HI-249-<530>

They indicate the station is in MAINE! That would be around 2,000
miles! However, some of the packets indicate this is a gateway station,
and now I'm wondering if someone nearby is running a "stealth" JF Gate...

Perseids METEORegistry Registration:

If you will be participating in the Perseids MS event, the METEORegistry
web page is now available. The purpose of registering is to provide a
real-time list of participants to expedite communication and increase the
chances of success. There are 9 questions, it takes about 1 minute to
complete. The Perseids MS event is from July 22 to Aug 24 with a Aug 12 peak.

Click on the URL below and then click on the Register Here link.
http://w9if.net/cgi-bin/beaconet/main.pl

We now have nearly a year of MS events and all registrants are in the
database. You can easily see the participants from previous events.

good luck,
Rich Parry

Hi all,

Just a quick note before I go mow the lawn (really looking forward to it :o)

Have:

W2EV - 1528-1530-1529-1529-1527
WD4RBX - 1667-1673-1673-1674
KD5CFB - 1557-1558-1557-1558-1559

First time I've seen KD5CFB - at 706.1 Km he's my CLOSEST contact. Welcome
aboard.

I'm going to turn on the CW ID for a bit but not sure how it is going to
work with my SignaLink Interface. If you copy it ok please let me know
otherwise I'll turn it off again.

Rendered body type: text/plain

Heard so far at N1NCO [FN42GL]

WD4RBX [EM84NM]
KC5DUI [EM26WE]

WD4RBX was there right when I started up at about 8.00am with a strong
signal and printed in UI-View almost immediatly. KC5DUI has popped up on my
screen in the last hour or so and seems to be getting stronger.

I'm not seeing anyone else at the moment. Is anyone seeing me?

It will be interesting to see how propagation changes over the next few
hours I.E. will the range become greater from up here in the North East, or
is this the best for today.
There seems to be quite a strong North/South bias to the propagation. I
often see WD4RBX and KC5DUI and from time to time stations in Texas and
Florida, but hardly ever do I see W2EV, even though he is much closer. I
have not seen any west coast stations since February/March.

Rendered body type: text/plain

Hi Ev,

At the moment have:

W2EV - 1523-1524
WD4RBX - 1694-1697
K9ER - 1527-1528
N1NCO - 1524 (haven't received enough to show a plot but can tell John is
there on the terminal screen)

Earlier also had:

KD5CFB - 1557-1558

The Preamble Text of   HTTP://GO.TO/BEACONET seems to be working out
perfectly for my rig to synch up. Always get locked on before your call
comes across but don't always get a plot due to QRM/QRN. Still running with
Scan2 set at one second and it seems to be doing OK. Have the Scan Range at
150Hz and the RX at 1575 since there's quite a spread between the signals.
Have reliable copy on WD4RBX since there are two chances in each of his
transmissions for PSK31Srv to forward the data.

Can't figure out which is better - taking out my repeat CALL & [GR##ID] to
shorten the transmission time and decreasing the time between transmissions
or leaving the repeat and increasing the time delay or taking out the repeat
and leaving the time as is. As we get more participants the freq gets
busier and the chance to block someone my system doesn't hear gets better.
Any suggestions out there?

Bob - KC5DUI - EM26WE

Been off the air for a few days as we are now into the annual monsoon
season. The T-storms have cleared so I now have the station back on the
air. Will leave it on through the evening and into tomorrow. If the
T-storms move in around 1400L, will have to take it down again.

At this time, 0025Z I see KC5DUI and that's it.

Hi Jeff,

Glad to see you back on the air! Have a couple partial printouts of you in
the PSK31Srv terminal screen but not enough for the system to pass to
UI-View32. Having the same problem with N1NCO - I know he's there from the
terminal screen just haven't gotten all the characters on ONE line yet.

Time is 0055Z and am still copying W2EV with a nice clean signal. WD4RBX,
Rich where did you go?

Had one of Jeff's UI-Path32 Error 5 crashes this afternoon while my daughter
and I were out to see Kiss of the Dragon (we both enjoyed it - so much
violence it was funny and Jett Li is fun to watch). Followed his
instructions and did a complete uninstall and reinstall so we'll see if this
fixes mine. Did find out I didn't have any uninstall under Windows (had
started with some of the earlier versions and done upgrades) so deleted the
directory, downloaded the complete version, installed it then uninstalled it
and finally did another install to see if all the DLL files got cleaned up.
So far it is working. Lost the last 24 hours data but nothing earthshaking.

Hi Jeff
I think that you are from Whidbey Island? My wife is from Everett, WA. Her Daughter and sun in law lived on Whidbey Island for a while. I was in Washington State last August for a week. I am quite familiar with your rainy WX. I love your state. Seeing your icon on the map is a touch of home for my wife Ruth (kf4vab)

Your BEACOnet buddy
Rich

Hi Rich,

As of 0133Z you reappeared - very weak but strong enough to get a valid plot on the map! Will let you know if UI-Path keeps running. I don't know what had happened but when I looked in the directory after doing a fresh D/L of V3.6 and clean install the files were different. Hadn't had the DOC file before - now I have to read the instructions and now there is an uninstall listed under Windows!

You're still showing about 1689 and Ev is about 1523. Watching the waterfall I can pick you out before it starts to print. Guess this is a good feature of being spread out and the scan doesn't seem to be having much trouble getting from place to place. Have noticed that when I have the squelch down low and the scan has stopped for noise then a signal pops up "real" close sometimes it just stays put and doesn't lock on to print. Seems like it doesn't want to scan/move any more.

Hi, Ev,

As said, I am one step away from completing my
install.   All software downloaded, parameters set in
the PSK31srv SETUP. awaiting the interface to
test on 20 meters as suggested before I go through
the BEACONet setup instructions and complete
the install per your instructions.

Will stay in touch as I do.

Thanks, Ed. I'll try to be patient. :o) I simply saw a block of
opportunity to button-down the website on Sunday (into a more final
form) and wanted to take advantage of it if possible. (I have twin boys
-- 20 months old and need to take advantage of any block of time that I
can <g>).

Hi Bob,
Yup, I was experimenting a bit. I realized that I didn't disable the
Status Text message in my Web Instructions (a waste of bandwidth for
what we do) and wanted to see if it could be used to TX "best DX heard"
before I disabled it for good. It went out only once...then I disabled
it.

On a side note, I have also found Rich to be very high in the passband.
Using the default scan value of PSK31srv and visual observation, my
system ended up lockin on to his signal only about 50% of the time,
though he was quite strong (because of being near the edge of the scan
range). I've since changed my scan range to 200 to see what happens.

I *love* this stuff! :o)

Hi Ev et al,

Attached is a snapshot from this morning - 15 July at 1330Z. Was going to
send the data from UI-Path32 but when I went to highlight the list got
another "runtime error 5" so lost the info. Don't know that I did wrong but
it shut down again - did the "clean" install yesterday and thought it was
working. Maybe I have too many things happening on this machine.

Hi all. There is a pair of very clear railroad tracks at a tone of 1600 hertz this morning but no ID. Could have printed that easily. Time of 1539 UTC. At 1550 UTC, a very weak pair with a tone of 1480 Hertz. It looks like ten meters might open this morning! I'm on a tone of 1500 Hz.

Rich, I've been on all along but the propagation gods have not been with us. Once in a while I see a pair of railroad tracks on the display but only for a few seconds, this using DIGIPAN as three of us remain unsuccessful in getting PSK31Srv to cooperate.
I would like to suggest to the group that we temporarily try a propnet experiment on 30 meters. Most of you in the East have short skip contacts up to about 0100 UTC. Possibly after that time we could switch to 10.131, USB 1500 Hertz. That would give the East two hours before bedtime and confirmation for us here in the West. 10131 kHz is only a guess at this time as there is a very strong commercial signal out of the Orient nearby. Anything higher will QRM existing Pactor/Packet networks..

Hi Cliff

Their is a good chance that that was me. I have been running experiments here
and deliberately sent empty RR tracks several times around 15:00 16:00.

I also see why I am not getting a plot on you. about the time I started RXing
your beacon the noise level jumped (high noon) I think it was around 15:00 -
15:30. I did RX a partial beacon from you. I got your call clear but that's
all. You are there but the noise on my end is killing my RX.

Hi Rich. I am sure that the railroad tracks this morning at
1540 or so was your station. That is the place that I have
been seeing you in the past. N7YG has been coming in for four
hours now at a tone of 1404 hertz. I've put a few ID strings
on his frequency as well 1500 hertz.
     Many thanks for the support of the idea of going to 30
meters an 10131, USB 1500 hertz. I will be there tonight at
0001 UTC Monday, Sunday local time. There really is no threat
to
the commercial station from us but rather the other way. It
is so loud in the West it dominates the band including APRS
on 10148.4 kHz. Let's try it at least! Cliff K7RR

Hi all

My BEACOnet^31 experiments was intended to be 3 parts but due to band conditions I was only able to run 2 of them the third will have to wait for favorable conditions.

First test was I wanted to know if different computers and sound cards would show a different beacon AF. Setup for the test was Yaesu FT-767 computer # 1 Cyrix PR200, sound card Yamaha. Computer #2 Pentium 100, sound card Creative Labs. Both computers were getting their AF from the 767 & running PSK31svr V1.08. Results = no difference in AF RX freq.

Second test was find a way to get on 28.131 with available (in the shack) equipment. I already knew that in order for me to be on 28.131 my dial had to read 28.130.87 (I set dial to 28.131 for tune & play). I wanted to assume that I did not know this. This is what I did. Lurking in the bottom of my Ham drawer I have a MFJ - 259 analyzer. It has a frequency counter function that I used to get on 28.131. I tried many TX modes and gate settings till I found out that FM and gate time of 1 second worked. I tuned my rig till I got an RF reading of 28.131 in the FM mode. The results were that my dial read 28.130.87. Right on the money. Next Bob KC5DUI reported my AF signal at 1536 from about 1666. My second rig from previous test shows my AF signal is in line with Bobs report 1527.

Had great copy on KC5DUI around 2155z in FN00ck. There was someone else a
little higher, but they were right on one of my 735's birdies.

Unfortunately the 735 died while finishing the tnc connections. Everything
was fine until I connected the tnc to the computer.
Y'all have fun. I was looking forward to joining everone on hf, but unless
the 735 heals itself, that won't happen anytime soon.
Hopefully it's just the 12v out of the supply.

Chalk it up to IDIOT OPERATOR syndrome. The radio is working again, but I'm going to have to recheck the pinouts for the accessory connector. Something was moderately hungry and decided a 3A fuse would make a nice snack.

Rendered body type: text/plain
```

Rich and Cliff,

I'm copying you both as of 0010Z 16 July. AF seems to be right on 1500Hz.
Cliff - if you could put a little more text before your call it would help
out. With the scan on it doesn't get locked on to you in time to get the
whole call. Something like - http://go.to/BEACONet - is long enough for
the scan to find you. Think you're using Digipan from the looks of the
time/date frame.

Bob - KC5DUI - EM26WE

Got home from work and discovered a massive T=storm moved in and took out
the power here along with my Windom Dipole antenna. Got everything started
back up and now on the 30 meter freq. Quite surprised the vertical loads so
well into 30 meters.

so far as of 0026 I am seeing:
K7RR
WD4RBX
KC5DUI

Looks good so far. WOuld be intrested to find out what offset from 10.131
everyone is coping me at. I shoud be at 1500 HZ +/- a few HZ.

271. [propnet] BEACOnet^31 test 3 complete

From: RickfordG@aol.com
Date: Sun, 15 Jul 2001 20:25:26 EDT
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-24342-2001.07.15-19.49.56--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi All

Thanks to Bob I was able to complete test 3. What I wanted to see was if
there was a difference (I did not think so) in AF FREQ between 2 different
PSK31 programs.

Setup, I calibrated rig B RX to Rig A RX. Bob had some hang time (RR tracks)
in his beacon that was long enough for me to set my RX on the second setup
(RCI 2950, pentium 100, Sound Blaster) so that the AF on both rigs matched.
Thanks Bob :-))
Now I was able to copy the same signal with 2 different rigs. I closed
PSK31svr and loaded WinPSK V2.09 on rig B and compared beacon AF. No
difference.

Rich WD4RBX

Have been seeing K7RR, WD4RBX and N7YG - 30M has a lot of noise here with
lots of "wiggly" lines on the waterfall. Am plotting K7RR and WD4RBX but
haven't gotten a complete transmission on Jeff - either lose the call or get
an extra character or two in the GR##ID.

Retuned my antenna so I can play for a bit. Will go back to 10M at 0100Z.
Another experiment works out - I only have one rig and antenna so can't
"play" on more than one band at a time :-(

Bob - KC5DUI - EM26WE

Hi all and especially Rich, Jeff and Bob. Seems that less than half and
hour into the 10131, USB 1500 Hz experiment we have success. I must have
printed your first beacon Rich at 0002Z! Strength just about the same as
on ten meters----QRK 3 print. Jeff was a surprise at 0016Z QRK4 and the
bucket of roses goes to Bob with perfect copy. Let me add a few letters
to the beginning of the text to aid in lockon for you guys. Yes, Bob, I am
manual tuning using DIGIPAN until I can get PSK31Srv going.   Cliff K7RR

Switched back to 10M at 0105Z 16 July and immediately copied W2EV. Experiment on 30M worked and everyone seemed to be within about 10Hz according to my display.

I'll be staying on 10M until the morning of 17 July when my wife and I are taking a short vacation. Have rented a cabin in a nearby state park for three days so we are going to relax and read and watch the birds and watch the water. Should probably be back on the air on Friday evening and will catch up on all the happenings while we're gone. I've had FUN this weekend.

277. [propnet] 30 Meters

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sun, 15 Jul 2001 18:15:45 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-24371-2001.07.15-20.50.40--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Well, 30 meters was a success, but as I do not have an antenna that will work on 30 meters I have moved back to 10 meters. The vertical loaded up, but the signal loss was terrible. Got the windowm back up, but it has never loaded on 30 meters. Does great on every other band including the SSB portion of 6 meters. The vertical is suppose to work on 6 meters but it does not. I think it might be a coax length problem. Might try to and a few feet to the coax run and see if that solves the problem.

I just received another ui-path crass message. This time it was when I clicked on the Maintain Database menu option in setup. Does it everytime. Other that that it does not crash any more.

Gonna try 6 meters for a few hours. Up on 53.53 with 100 watts to the windom antenna at the present time. We'll see what happens over the next hour or so.

Many thanks, all of you that participated in the 10132.5 kHz experiment.
We were most fortunate in selecting upper sideband. Shortly after most
had left the frequency the commercial station on 10128.5, wideband shift
came on and almost ruined the experiment. If we had picked LSB, we would
not have been able to continue. That station was 20 over nine!
     You probably noted the Pactor activity slight higher than us. That
is an automated BBS with wide coverage. Lower was some RTTY activity.
     Jeff indicated a poor antenna match but was quite readable. Rich
asked about his frequency and I read him 30 hertz low----no matter as we
all found each other. The general target was about ten hertz low. Rich
remained solid print until 0200Z.   Finally Bob, have a good vacation!!
     Let us consider 30 meters again. It appears to be a good alternate.
Those with experimental blood and a narrow receive filter might want to
consider PSK31/30M operation halfway between the 10128.5 kHz commercial
station mark and space. That would be effective spectrum utilization!

Cliff (and folks),
Well done! Much was learned and initial data gathered in support of
something that has been "known" anecdotally for years as well: The
higher the frequency, the narrower the geographical scope of a
propagation circuit. Of course, one event doesn't prove anything, but
it's a good start!

I tried to join you, but couldn't get any of my antennas to load up on
30-meters (I'm having some problem with my antenna tuner). Maybe next
time for me. :o)

Thanks for suggesting it!

Rendered body type: text/plain

As an observer of the posted data, rather than a direct participant, I
wanted to share some thoughts:

1. It's *great* to have the public discussion of our work. It
   not only informs, but also motivates.
2. I always wondered about frequency readout accuracy and
   stability. Using Tune-and-Play, on 30-meters (HG <g>), I'm
   hearing that everyone was within 10hz of eachother. This,
   compared to 10-meters where we are rarely that clustered.
   This is excellent information, as we continue to push higher
   into 6- and 2-meter operation (and may eventually be looking
   at the establishment of a transAtlantic BEACONet system on
   2-meters.
3. The official "lowest" frequency of BEACONet operation has now
   been established as 10.131USB+1500hz and the DX record on that
   band (HG) is now 3,449 km. That is unofficial, though, as it
   will remain until both sides of the contact post the
   Configuration Code that they received from the other. :o)
   Hopefully, K7RR and WD4RBX captured/saved that information :o))
4. Congrats to the four participants: K7RR, KC5DUI, WD4RBX, N7YG!

Well done!

> Other that that it does not crash any more.

Please drop Andy a note with your version numbers. I'm conserned about
the crashes. If it's a problem associated with his code, I'd think that
he'd be interested in addressing it. UI-Path has many good features
(thanks to Rich's suggestions to the author) that we could further take
advantage of, but some may shy away from using it if you tell us that
you're having problems with it (even if others are not).

Hi Folks,
I don't normally forward directly sent eMail, but this didn't include
anything proprietary in nature, so here it is...from our newest
HY-BEACONet^31 participant:

- -

Enjoyed your QST article and couldn't resist the urge to join in the
experiment! Tried first to install AGWPE as a substitute for a TNC but
had problems getting it to work. Seemed to transmit okay but never could
get any stations to show on the UI-View screen. Signals made it to my
sound card (I have a RigBlaster interface with an audio output cable
connected to my computer's speakers) but no further. Perhaps my computer
just wasn't up to the task (AMD K-2 300Mhz with 46mb RAM).

This weekend I decided to try the BEACONet^31 as I work PSK31 quite a
bit. The installation went smoothly and I was quickly on the air. To my
delight within a few minutes the first station popped up on my screen -
none other than W2EV!

Left the computer and radio on from about 14:00 to 1:00 UTC today.
Received two stations besides you - WD4RBX and KC5DUI. Plan to continue
the experiment next weekend and perhaps look for a used TNC.

Best wishes from Baton Rouge,
Dave KD5CFB

Hi All,

We had a 30% "chance" of rain/thunderstorms today so shut my system down
before leaving for work. Right now, we are having a downpour and LOTS of
thunder/lightning - sure glad I decided to be safe.

This is supposed to continue off/on through tomorrow so won't be back up
until after our mini-vacation. Have a good week and will look for ya'all on
the air this weekend.

Bob - KC5DUI - EM26WE

Hi Ev. Thanks for the note Ev. Yes, I thought that the test
went very well. We had a few check in and most of them left
when it was suggested that six meters was open. No big thing
as I think many are interested in that band.
     Regarding the record on 30 meters, I did not write down
the configuration code of Rich as we both realized the mistake
of having the ten meter code installed. I'll buzz him and see
if he has a record of his transmissions. Using BD, I agree on
a path length of 3451 KM, two away from your calculations.

Hi all

I plan to do some research into this problem. I have UI-Path on two computers and UI-path is crashing on both of them. Some crashes are quite sever to the point that I have to hit the reset button on the computer because the whole operating system is crashing. Some are mild and easy to recover from. I would like to hear from you all about your crash experiences. I plan to E-mail Andy at the end of the week and Ill include your info on the problem. Please be as detailed as possible I want to try to simulate your crash errors here. If you have already E-mailed Andy please let me know so I wont be duplicating information.

Thanks
Rich WD4RBX

Rich and the net. Your signals were coming in on 28132.5 kHz
for over four hours today! From 2200 to 0300 UTC, signals
were mostly readable. Local sunset here was 0301Z, however,
I believe you shut down rather than the propagation leaving.

> I won't keep you all waiting any longer. Here is my report for the
> last 23 hours. Also welcome N2TIF. Ev you running 2 calls now? ;-)

It's nice to have N2TIF on-board! He is about 50 miles to the west of
me. I'll have to check the system to see if I am plotting him (though
we've got a bit of rain static this morning).

As for the "new call", it was almost a Twilight Zone experience for me.
You plotted W2ELE. Interestingly, I almost requested something very
close to that a few years ago...my original call was WN2ELB/WB2ELB. :o)

To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-24846-2001.07.17-20.52.29--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Rick

I just gave my UI-path a going over and I can consistently get the ERROR 5, invalid procedure call,
everytime I select Maintain Database from the Setup Menu. I also believe they might be coming from
using the real time plot. I had this option enabled prior to reloading UI-path last week.

Won't be on the air this evening or tomorrow. We got some big hummer T-Storms in the area so everything
 is shut down.

  Subject: [propnet] ui-path crass message.

  Hi all

  I plan to do some research into this problem. I have UI-Path on two computers
  and UI-path is crashing on both of them. Some crashes are quite sever to the
  point that I have to hit the reset button on the computer because the whole
  operating system is crashing. Some are mild and easy to recover from. I would
  like to hear from you all about your crash experiences. I plan to E-mail Andy
  at the end of the week and Ill include your info on the problem. Please be as
  detailed as possible I want to try to simulate your crash errors here. If you
  have already E-mailed Andy please let me know so I wont be duplicating
  information.

  Thanks
  Rich WD4RBX

Hi Cliff,
What was your calculated DX for the 30-meter BEACONet^31 contact? I've
somehow misplaced that info and am updating the Notable Records section
of the website.

Ev, W2EV

Don't be discouraged, Wayne. After two solid days of nothing...not even
fragments, I tuned around to find only N-S propagation into Central
America from NY...and even that was a difficult receive.

Sometimes "nothing" tells us "something". :o)

Hi all,

Just got back form our "mini-vacation" and fired the rig back up. As of
1725Z have WD4RBX plotting on the map and everything else appears quiet.
Didn't have too many emails from the list so guess there hasn't been a LOT
of activity. Maybe the weekend will liven things up.

I'll be shutting down again shortly, but in the last hour I've plotted DUI and
caught bits of RBX.

Not too bad, considering all the noise tonight.  Oh well, almost time for
work.

If anyone has any ideas on how to get psk31 and ui-view(16) to send one long
burst instead of 2 or 3 short ones,
I'd really appreciate it.  I have no idea why the system is doing it, but it
sends one string, drops transmit, and then
start all over again.  Sometimes it will do it 3 times!

I'd rather it do one long one than 2 or 3 short bursts.  It's gotta be driving
you guys nuts if you can hear me.

Rendered body type: text/plain
```

```
Are there any special issues to consider if one uses an HTX-10?  I'm
about to help someone through it long distance and could use some
up-front insight.  The interface is a K4ABT system.

Any thoughts?
Ev, W2EV

Rendered body type: text/plain

Hi Karl,

Just read your message saying you'd heard me. Checked the UI-Path32 table
and it was showing 3APZ during the 0000Z hour. Nothing showing in the
UI-View32 screens so looked through the PSK31Srv incoming text screen and
found the following.

-------------------- TX END -------------------
k_   te   ittotesD-i □la   r t =y o =i otu et ith tBEACONet
i 3APZ>□A0:>2Y0erhPVt o/go.to/BEACONet
httr N e NIè>□v0DAto:#00
] N3APZ HY0DA0 [FN00CK] n3apz@arri. et
3 eea
-------------------- TX START -------------------

Using the "Send to Client" feature put your info in the "box" and now have
you plotted on the map even though the logging time is wrong. I'll be on
for the rest of the weekend unless we get some storms and will keep watching
for your beacon.

Bob - KC5DUI - EM26WE

Rendered body type: text/plain

OK...the HTX-10 goes into transmit as soon as I plug in the connection
to the serial port. I'm using a pre-built K4ABT (www.packetradio.com)
interface called a Rascal.

The LED is lit, indicating the serial port is sending a DTR signal as it
should under "TX" conditions. My gut tells me that somehow the serial
port is "stuck" in "tx" mode. Any thoughts as to how to "hard reset"
it?

We've got a BEACONet^31 Lurker in Southwest Florida very close to being
a full-blown BEACONet^31 participant.

So far, we've not tried to include UI-View to the mix...we're simply
trying to get PSK31srv to function by itself. He's lurking on 28.131
USB until we can figure it out. Any thoughts?

Ev, W2EV

My gut tells me that somehow the serial
port is "stuck" in "tx" mode. Any thoughts as to how to "hard reset"
it?

I have never heard of "hard resetting" a com port. I would go to Start|
Settings|Controll Pannel|System| Device Maniger| Comport & select the port in
question | Properties | Look to see if windows reports this device is working
properly. If comport has an ! in front of it you could have a conflict
problem.

Also I would test another device such as a phone modem or TNC in the
offending port to be sure it is the port. Also I am not sure that plugging
the Rascal into a hot comport is a good idea? I am using a Rascal (kit) on a
Yaesu and it works just fine.

That's my best guess.

Which version of WINDOWS is in use. I've seen some reports on WIN ME and
2000 doing some strange things with the com ports and have seen refs to
programs to "clear" the ports. Not sure if this helps or not.

I'm using one of the Tigertronics SignaLink units that doesn't require a
serial port and it seems to work fine. Can be programmed for many different
rigs and can be ordered with a cable to plug into the mic connector on
different rigs.

As it turns out...it is something to do with Windows 98 and the serial
port. It looks like there is always an RTS signal present. I'm
thinking of asking the operator so delete the profile for his serial
port, reboot and let the system autodiscover it again upon reboot.

Actually, what I may suggest is to leave the Rascal plugged in after
deleting the profile, to see if the signal goes away. That should tell
me if it's Windows or a hardware failure.

Of course, I can always just have him purchase another serial port
(expansion board) and use it instead...but it would be nice to get it
going with the equipment he has. Any thoughts before I go through those
motions?

Rendered body type: text/plain

Just as Rich announced just a short time ago, the grand-daddy of 'em
all...the Perseids Meteor shower is just around the corner. Care to
play on packet? Two programs include a meteor mode: APRSdos (for
MS-DOS) and UI-View (for Windows).

More information to be posted over the next several days...but in the
mean time start thinking about putting that 150-watt amplifier in-line
and playing for a few days just before and after August 12th.

Care to see just what's been caught in previous years? Screenshots of
Leonids successes (including a single meteor that was captured by
several participants...and simulated as a screen graphic) are available
at http://go.to/BEACONet | Participation | BEACONet Successes. We'll be
looking to add some interesting screen shots from the Perseids, too.

Documented DX records by band are listed at: http://go.to/BEACONet |
Information | Notable Records.

There's even a web-based "registration" system that was developed...with
the intent of graphically showing where the participants are, in the
hopes of coordinating activity a bit more. See that at
http://go.to/METEORegistry (thanks to W9IF for that!).

Join in on the fun!

Ev, W2EV

At 07:19 PM 7/22/01 -0400, E. Tupis W2EV blasted the following out into the
ether:
>What's the cheapest way to create a record of a beacon that plays over
>and over and over...solid state? (no tape stuff)

      The cheapest way being "use what you already have" -- just use
Windows' Sound Recorder to generate a .wav file...

>BEACONet^31 beacons could be deployed quickly around the world, quite
>inexpensively. Used RS HTX-10's for $100 +/- can be had easily. Any
>brainstorms?

      Oh, that's different! Or is it? A cheap old 486SX will still run
W95/W98, and output sound...

The idea is "self contained" and quickly deployable. I like the idea of
the RS audio recorder/player. Any other thoughts?

Ev.. LEt me know what you decide to use and how it goes... You may be on to
something really nice here!

73 Jerry

Not real familar with the RS Chip.. but if it needs a trigger to make it
play we can use a simple circuit to start the recording over as soon as it
completes the first time.. (TIMING) very little current draw also..

> What about the "PSK31 Audio Beacon" as described in the August 2001 QST?

It's an excellent system...but I was thinking that it may be more
complex than necessary. A simple digital recorder/player hooked into a
transmitter is all that is necessary (minimally).

There was an article in QST a couple of years ago about using a digital
recorder from a greeting card as a "contest voice keyer". It's
something along those lines that I was thinking of...but maybe I'm all
wet. I'm just thinking out loud.

Any more comments, anyone?

> interesting to have a second frequency without all the 2 Mts
> and Igated traffic. Anyone agree or disagree ?

Hi Brian,
What you describe is the BEACONet service. Don't forget that APRS (a
trademark of Bob Bruninga-WB4APR) is an application of UI-Frame
technology, with a certain philosophy of implementation (and an
excellent one for what it is set out to accomplish, btw).

BEACONet uses UI-Frame technology, *and* UI-View (with UI-View
extensions enabled even if one lives outside of Europe because we are
all 'in range' if the band opens between u) on a different frequency
because our UI-Frame use-philosophy is different.

The idea is to find the "least common denominator", world-wide and
coordinate it so that we can all watch for band openings. There are two
flavors of BEACONet: BEACONet (which uses AX.25) and BEACONet^31 (which
uses PSK31 + UI-View).

Because of the slower speed of these modes as they apply to HF operation
is is absolutly important that one abandon lat/lon position
transmissions for the much shorter [GR##ID]-in-comment format. For more
information on that, visit the BEACONet website at:
http://go.to/BEACONet.

There is very little activity on 20-meters yet, but we've tentatively
set our sights on the following two frequencies for future population:

BEACONet (AX.25 @ 300 baud): 14.114 LSB
BEACONet^31 (PSK31-based) : 14.131 USB + 1500 hz audio

By the way...we are now quite active on 10-meters, using the following
two frequencies:

BEACONet (AX.25 @ 1200 baud): 28.128 USB
BEACONet^31 (PSK31-based)   : 28.131 USB + 1500 hz audio

Here's hoping that more informative than confusing. :o) Join us, would
you? Your participation would be warmly welcomed!

Ev Tupis, W2EV

My BEACONet frame looks like this (HOPn-N = TRACEn-N to us, btw):
W2EV>HY1G02,HOP2-2:[FN03XD] w2ev@arrl.net

My BEACONet^31 frame looks like this (no digipeating on ^31, btw):
W2EV>HY0G02:[FN03XD] w2ev>hy0g02:[fn03xd]

I am not a technowiz but 4 Things pooped to mind all though none of them are
plug and play.

1) Voyce keyer
2) Simplex repeter
3) Radio Shack voice recorder moduel (already mentioned)
4) Drop MFJ a line and see what they will do for us with a world wide
potential customer base.

Hi there,

I'm a total newbie at this, so please forgive my ignorance on the
subject.

I don't have any real HF capabilities yet but I was messing with a small
portable (SSB capable) shortwave radio and a small transmitting loop and
heard some digital noises on 28.128 USB. The noises I was hearing
sounded more like
300bd to me than 1200bd. Could someone perhaps send me a small wav file
so I could hear what I'm looking for?

Thanks and 73,
--Alex (KR1ST)

Hi Alex and Welcome aboard.

Tune you rig to 144.390 (FM) this is the APRS frequency. You will hear 1200
BD packet there.

Most of us are playing with PSK31 on 28.131. If you want to hear PSK31
without waiting for a propagation beacon try listening to 28.120.

For a wealth of information visit the BEACOnet web site. Ev W2EV has done a
bang up job putting it together. Not only will you find BEACOnet information
but links to software that will allow you to hook your computer to your
receiver and actually RX BEACOnet (ax25 packet) and / or BEACOnet^31 (PSK31)
signals. All you will need will be an audio cable from your receiver to
computer sound card and you will actually be participating in BEACOnet. You
can report the stations that you receive right here on the mail list. Well,
even after you get your Rig you will still want to report your BEACOnet
catches here, We all do! So Alex, as you can see even though you can't TX yet
you are a valued member of BEACOnet. Remember if you need help with your set
up drop us a line. There is a lot of folks on the list that are eager to
help. BEACOnet URL   http://go.to/BEACONet

Sincerely,
Rich

Thanks for the response. Well, if it's supposed to sound the same as on
.390 than I'm sure that I was hearing 300bd. It sounds similar to the
300bd APRS traffic on the 30 meter band. I'll see if I can feed it to a
300bd soundmodem on my Linux APRS box tonight when I get back from work
(if it's still there that is...).

Hi Alex

Ill be interested to see what you find out. I forgot to mention there will be a meteor event on August 12 that the BEACOnet bunch will be trying to bounce signals off of the trails. Ev will be posting information about this as time goes along.If you are set up for APRS then you can Fully participate :-))

Rendered body type: text/plain

The BEACONet advantage is that we can operate 24-hours a day through meteor events! We cast our "BEACON-net" and catch falling stars. Start thinking about activating on 147.585 MHz (the most popular frequency for meteor work) for the few days prior to and after August 12th. You may be suprised what you see.

BEACONet enthusiasm on 2-meters has suffered from the lack of an actual network of well-placed Client-Hub's (stations at altitude, capable of repeating BEACONet transmissions). Meteors are the ultimate "Client-Hub"! The refraction medium is 100-km in the air and capable of propagating signals over 1,000 kilometers (who will be the first to make it past 2,000?).

Here is one time where more RF is better! Dust off that 160-watt amplifier and run it! Yes, a simple monopole antenna can work, but a small beam (under 10-elements) will work better. It's all about Effective Radiated Power.

Planning on participating? Register at http://go.to/METEORegistry so that others will know where to point their antennas, and can make informed decisions as to what quadrant-slot they will participate in (more info on this shortly).

Visit the BEACONet website (http://go.to/BEACONet) for more information on Meteor Mode...it's all there.

Hi all,

Haven't had a hit in over 24 hours!! We have "sporadic" thunderstorms forecast this evening through Friday so will be shutting down the rig before I go to bed tonight and hope the rain comes with the storms - trying to keep the trees (don't have a forest just a couple) going takes a lot of water. Temps have been in the HIGH 90s to LOW 100s for several days so could use some rain.

Our mini-vacation last week was GREAT! We had a cabin (with
air-conditioning) in the woods and enjoyed watching the birds (Blue Jays,
Nuthatches, Tufted Titmouse, Red-headed Woodpeckers) and squirrels (4 or 5
different ones) and chipmunks and racoons come onto the "patio" to get bird
seed and bread pieces. Sure am glad we decided to do a cabin instead of a
tent - we'd have melted into a puddle without the a/c - of course just a FEW
years ago we would camp with the Boy Scouts and think nothing about the temp
(must be the age). Did a little hiking, lots of reading and just enjoyed
ourselves (was nice without the kids for a change).

Will give the rig a rest for a couple days then plan on being back on the
air on the weekend.

Bob - KC5DUI - EM26WE

OK, OK, I'll break out the amp and a 3 el beam, but where, oh where
should I point it???

BTW, if all the people running down on the APRS freq would c'mon up to
147.585 perhaps the BEACONet thingie would actually start to be of use.

Another note - I've purchased a 100w GE MastrII with a big commercial
antenna on an 80' pole on that 1706' elevation over by work, but had to

promise to keep the current packet node running on it until next spring.
Until then it's just my 50w to a pair of stacked squalos (that no one
seems to have found on the air yet, but it's spare equipment so I'll
just keep letting it squawk away ;-)

I'd give my left arm to have a list of ops that are 24x7 on .585 . . .

So, back on topic, taking suggestions on where to point the beam around
the 12th.

Hi Rich,

Wondered several times what was happening on BEACONet^31 but then we'd have
a woodpecker or blue jay land on the porch and I'd get sidetracked (couldn't
convince any of the birds or squirrels to eat out of my hand). Did read
four novels while we were there (didn't even take any radio mags with me)
and played a lot of cribbage (know I'm getting "advanced in years" as I
couldn't stand it before!!).

Had my yearly VA checkup today and was told I should be around for another
year! Have to have one of the colon "examinations" but since they're now
scheduling for June 2002 I should be safe for a while. Seems the VA wants
to get a "baseline" on all of us over 50 types but can't afford more doctors
or staff so they just keep backing things up.

The International Space Shuttle's orbit is starting to favor another
trans-Atlantic attempt. At it's highest point in orbit, it is at 402
km. That point is being reached now just after it reaches its
northernmost trek. This equates to a radio horizon of just over 1,600
miles.

This means that stations along the East Coast of the USA have an
opportunity to be heard in the UK! Not for much of a window...but it
looks like it's possible.

With directional antennas, and good power (50-watts or so), it should be
possible to make it through the ISS across the ocean.

Who is up to the challenge? Since UK operators are not allowed to run
unattended TX stations, I would suggest that anyone who wants to give it
a try should run RX-only, overnight...all weekend long.

East Coast USA stations...watch the ISS track across the Atlantic using
http://spaceflight.nasa.gov/realdata/tracking/index.html and start
transmitting when it's just shy of half-way across the Atlantic, until
it's just over half-way. Then stop.

Alas...I'm just out of range at my QTH, but I'm happy to help others
attain history-making glory. :o)

Anyone up the the challenge?

Ev, W2EV

Rendered body type: text/plain

Each time I transmit, this is what I send:

HTTP://GO.TO/BEACONET
W2EV>HY0G02:[FN03XD] w2ev>hy0g02:[fn03xd]

After watching this a few times, I've come to see that lower case
letters transmit more quickly than to upper case letters. Isn't that
interesting? I don't know how/if we can take advantage of that or
not...I just found it interesting.

After poking around, I have found DigiKey offers digital audio
recorders/players on-a-chip. Cost is under $10ea in unit quantities.

Why do I care? I'm glad you asked...

PSK31 is "just audio". I started thinking about all of the transceivers
that are already out there with "contest voice keyers" that could be put
to use as BEACONet^31 beacons! A topic for another day... however ...

Less than $20 worth of parts, a used HTX-10 ($80-$100 on the used market
from what I can see) and one has a dedicated BEACONet^31 beacon...ready
to deploy anywhere and leave running 24/7. We can't digipeat on
BEACONet^31, so the HTX-10 would simply be in TX all of the time. Using
a 90-second digital audio recorder, one could record a BEACONet^31
beacon like mine:

HTTP://GO.TO/BEACONET
W2EV>HY0G02:[FN03XD] w2ev>hy0g02:[fn03xd]

Even adding 15-seconds of "idle" in front to get a good IMD reading.
Such a transmission would consume only (15seconds for the idle)+(23
seconds for the actual information-containing audio) = 38 seconds of TX
time. That is a duty cycle of 42%. If the "idle" tones were cut to
only 10-seconds, and the preamble removed entirely (why would it be
needed with 10-seconds of ilde?), the TX becomes only 25 seconds or
so...a duty cycle of only 27%!

I'm simply having a brainstorm here. I'm going to have to get a unit to
give it a try. The next thing to see if if the HTX-10 has a
frequency-lock button to keep things from being bumped once tuned.

Anyone up for a project? :o)

I'm hearing only South/Central America on 10meter voice...and they
aren't very strong. It looks like we're hitting the mid-summer
doldrums. I've not copied anyone on 28.131 so far today.

So...I'm unplugging to relocate some antennas. When done, my 10-meter
vertical should be near 40-feet in the air (it's at 20-feet right now.
With any luck, I'll be back on before the weekend is done.

For now...don't be looking for my icon. If you see it...you better
check your flux capacitor...it may have taken you to a different point
in space-time. :o)

Ed, great minds in the same direction again! I dismantled a telephone
answering machine two days ago with the idea of removing the ten second
voice announcement module. It could be the same as the DigiKey device!
Nothing further been done as I have been feeling really awful. Cliff K7RR

Hi Ev & all

Unless there is a technowiz among us I will try to find a guy (manager) that
works for the same company as I do. He is the sharpest electronics tech that
I have ever meet. It should not be hard to find Mike & Ill bet my flux
capacitor that he would love to help us develop our first BEACOnet kit. Yes,
I said kit! What you think Ev?

Let me ask a question. Say we develop this kit would it not record AX25 too?
would it work as a cheep beacon on any band and or mode?

Rich
WD4RBX

PS
My beacon has been off the air do to unpredictable WX.
We got 2 inches of drought busting rain in one hour & the
mother of all lightning. The wind drove this water fall of
rain right through the wall and soaked my hallway.
 As soon as I see a better WX report Ill fire up.

360. [propnet] Good one!

Hi Ev,
That's one of the "advantages" to using "mixed" text when carrying on a
QSO using PSK31. The lower case take less time to xmit and get your message
through. Before our storms moved in earlier this week (still here as of
Saturday evening) I changed my text to follow yours. Still allows two tries
on each beacon but a little "cleaner" to work with. We need the rain but
could do without the lightning!

Bob - KC5DUI

Before we run off doing this, someone should check what the phase behaviour is
of these digital recorders. If it can't keep its phase (which is normally not
really necessary for voice record/playback), it's useless for PSK31.

Wouldn't this be a lot easier if someone could program a PIC, similar to the
TinyTrak? Thinking about it, a BEACONet^31 beacon is a lot simpler than a
TinyTrak that needs to put fields, etc. in the right order. Should be simple
for an experienced PIC programmer...

Welcome back, Ramon!

> Before we run off doing this, someone should check what
> the phase behaviour is of these digital recorders. If it
> can't keep its phase (which is normally not really necessary
> for voice record/playback), it's useless for PSK31.

I don't know what 'phase behevior' means...but I think that, for $20 in
parts one could easily give it a go and see what happens. :o)

> Wouldn't this be a lot easier if someone could program
> a PIC, similar to the TinyTrak?

My mind works in very simple ways, I guess. :o)) I can use a tape
recorder (or even a computer sound-card) to record audio...PSK31 is just
audio...everyone knows the concepts of audio record/playback...why not
join the two?

A follow-up thought on this in my next message...

Ev, W2EV

366. [propnet] Re: BEACONet^31 Project Thoughts

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Sun, 29 Jul 2001 08:39:52 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-26757-2001.07.29-08.03.49--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

AX.25 and PSK31 are "just audio" for sure, and ought to reproducable by
being recorded, and played back. However...there is a distinct
difference between the AX.25 service and the PSK31 service in that the
PSK31 service is truly a beacon-only service (no digipeating allowed).

We've learned two important lessons so far (when it comes to the AX.25
world):

* digipeating (HOP1-1 or HOP2-2) provides some extremely interesting
data that non-digipeated systems do not (Station A hears Station C,
Station B hears Station C, but Station A does not hear Station
B...etc.).

* at non-ionospheric frequencies, digipeaters (Peer-Hubs) are an
absolute necessity as the band opens first for those at altitude and
with higher power (now...add this to the above statement).

So, while a simple Client-Hub at altitude could certainly provide a
useful propagation mechanism a Peer-Hub (digipeat enabled) is a vastly
superior system.

Here's why I've come to that conclusion: Look at the very interesting
propagation that Earl has observed on the 144.39-MHz APRS network. He
has yet to see many frames come direct...almost all are through
well-placed digipeaters. The band is "open" between the digi's at
altitude, but not for the stations at ground level...at least not by
using AX.25 FM. However...there is a distinct possibility that the band
is open for narrowband operation. Again...AX.25 can provide the
heads-up that something is brewing...and SSB/CW can be used to "make the
circuit".

Of course, data is still coming in, and my opinion plus $0.99 get's you
a Big Gulp at the corner mini market. :o) fwiw.

One thing for sure...it's fascinating to study this stuff! :o)

368. [propnet] Could this be the next BEACOnet^31 software?

From: RickfordG@aol.com
Date: Mon, 30 Jul 2001 16:31:03 EDT
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-26925-2001.07.30-15.53.03--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi all
A while back Ev asked us to look at software that could have potential for BEACONet. I downloaded two specimens and found one of them to be quite interesting. The first (chicken icon) not suitable for us. The second cough my attention because of it's name "WinWarbler." It will simultaneously receive 3 audio frequencies & run on a 75 MHz pentium based machine. This software is free and has awesome support and is evolving. Maybe it could evolve into something we can use?

You don't have to download this software to see the potential. Just go to the WinWarbler web site and check it out. I do recommend downloading it and see for yourself. I have 2 computers in the shack which makes this sort of stuff painless.

370. [propnet] UI-View crashing update

From: RickfordG@aol.com
Date: Tue, 31 Jul 2001 16:42:11 EDT
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Cc: apritch@lineone.net
Message-ID: <LYR1548-27134-2001.07.31-16.04.30--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi All

I talked to Andy and he told me that he could not duplicate the crash problem that we were experiencing. This put my though process in motion. I found that other programs were having problems. I did not realize it but PSK31svr was stuttering during RX & TX. I could no longer log on line with my ham shack computer. I read a thread (different computer) that came across the UI-View mail list that talked about running to many programs and using up computer resources. I checked and I had 68% free. I decided that this was not the problem. I figured that maybe (I am not a programer) something else was the offending program. I had recently downloaded a program for reading PDF files. This program would not run. I also tried to update to AOL V6.0. It would not run. I also had multiple copies of UI-View & UI-Path on my Computer. I removed AOL, PDF reader and all but the newest version of UI-Path. I also closed the short cut bar for Microsoft Office. I installed AOL V 5.0.

AND THE RESULTS IS!

While running UI-View, UI-Path, XG-Studio (my sound card program) and PSK31svr my system resources = 78% free. All necrssery BEACOnet^31 programs are running wounderfully! I dough that UI-Path will crash now. Ill keep you posted.

Rich

Same here. Rich's beacon is the only one. I have been active 24hrs/day
since the weekend, but I heard Rich only around noon yesterday and 11 AM
today. (EDT). Are you on BEACONet^31 all the time or are you switching
around between packet en PSK31, Rich? That may explain the "strange"
propagation between us.... :-)

Hello All,

Heard N1WPN yesterday, 7/30 at 11:32 AM EDT here just northwest of Detroit
(EN82HL) on 28.128. Only received two packets, then he was gone.

First station I've received since June 30.

Rich

Fascinating! I'm having similar general issues with WindowsME. System
resources hovering in the middle 60-percent range, and the system simply
starting to act goofy...mostly since installing a firewall.

Keep us informed of your progress!

If memory serves, it is related to a bad reinstall (maybe from an
update, rather than from a full-install).

I ran a PSK-31 Parrot on 10 m using the radio shack chip and apparenly
everyone (worldwide) said it worked fine. It was good for 100,000 R/W
cycles and I ran it for about 2 months. It was still working fine when I
took it off the air due to no one using it anymore...

Rendered body type: text/plain

I've been reading the postings regularly, but haven't been on the air
recently because I had to finish moving into my new cave.

Anyway, I've been thinking about the project Ev mentioned a while back
and it occurred to me that we might build a xtal controlled ssb
transmitter in the 10-20w range instead of buying a used HTX-100.
Instead of tying up a transceiver, a small dedicated transmitter would
work.

I've been poking through the handbook for easy to follow designs, and

while there isn't a complete 10-m rig in there, designs for other bands
are. If we could build an ssb IF generator, then we could also
construct modules to take the IF and put it on other bands (similar to
the Ten-Tec scout). And if we use a wideband final, changing bands
would only take a minute or so, as long as an appropriate antenna is
available.

Combine it with a digital audio chip or PIC, and you've got a
relatively tamper-proof system.

Just a few thoughts...

Karl, N3APZ

Thanks for the NUDGE Ev (now that I've picked myself up from
the floor). In the last 24 hrs I have had pa3eug, kc5dui , and
wd4rbx show up . I have lowered my antenna down due to the
tropical wave thats hanging of the coast making for some pretty
strong winds. As soon as it passes I will get it back up nice and
high.

:o)
Good news, Jesse! I've ordered a dual RS-232 PCI board for your
computer. When it arrives, just open the case, plug it in and power
up. It should auto-discover. LEt's hope that the control line behaves
a bit better and you can join in on the transmit side of BEACONet^31
soon!

My antenna is still down...the tower is a bit heavier than I can put up
myself, so I'm waiting for a friend to stop by and give me a hand. I
should be back up by the end of the weekend, though.

In the mean time...I'm on BEACONet-VK (that's AX.25 based 147.585) and
looking toward Michigan. Conditions look like they're building.

Hi Jesse,
  Glad someone is seeing my signal - haven't had a PEEP since bringing the
system back on line yesterday evening. I "think" the thunderstorms are gone
for the rest of the week so will try and leave the BEACONet^31 running 24/7.
Will be watching for you on the air soon.

Oops, I forgot to include it. It came through as Hi0I0-15.

I'll assume that's
HY = 28.128,
0 = Client Class,
I = 250+ watts,
0 = 1 antenna element, and no HAAT information,
-15 = Omni (consistent with antenna elements).

Distance between N8QLT and N1WPN: 625 miles

My station received this with a 40m inverted-V dipole tuned to 10m, at 40'.

Well, I've been pointing -2 toward Buffalo/Rochester/Chili/Syracuse/Stacy
Basin since last night, and will leave it in that orientation through the
Perseids, probably longer.

Since we don't have any stations in Cleveland or Columbus (about 140 miles
away, but those of us around the Great Lakes can regularly make use of
localized inversions to work simplex over that distance and farther), I'll
keep it pointed to the east.

FYI, two weeks ago I worked a 440 repeater located in Keewaunee, WI from the
back porch of the cottage I was staying in Frankfort, MI, on 2 watts with a
handheld and rubber duck- 65 miles over Lake Michigan. The repeater was full
scale, and this path was open everyday from about 0600 to 1100 EDT, and then
again in the evening.

Karl,
Brilliant! I think your insights are right on the money. Imagine a
world-wide BEACONetwork that occupies only 3-kHz of spectrum using such
simply deployed systems.

I agree that Crystal control is a necessity to assure stability. Are
there any already available commercial products (MFJ, maybe?) that come
close?

I am enthused of Bob B.'s report of using the RS audio rec/play chip for
a PSK31 parrot with success. Given that this idea is record once and
playback forever, one wonders just how long the chip would last without
the need to reset and reprogram. I guess it's time to build one and let
it run for a while. :o) (sooo many projects and soooo little time <g>).

Ev, W2EV

I thought about that myself and did some checking on Ebay the last two
weeks. I've seen the older cb's going for around $50.00, give or take,
depending on the [deleted] bidders. :)

It's certainly worth looking at if you can get one cheap enough!

In answer to Ev's question, I haven't seen anything available in kit
form that is less than HTX-100's listed on Ebay. Getting them in
multi-band form costs about the same as a used Icom 735 (several
hundred $).

Wow, I never though I would be receiving much today with
Tropical Storm Barry hanging around, but I actually picked up a
new station k7rr cm95ni on Aug 2 at 7:24 eastern time. I also
picked up kc5dui and pa3eug today. I can't wait to start
transmitting!

Fab! It looks like Cliff is being heard (and probably could have been
for quite some time, had we had an active station on in his "skip zone"
before).

Thre is a feature of UI-View that allows you to display all of the
stations that you've copied. Open a "Stations" window. Change the
"km/mi" to read DX in kilometer rather than miles. Then, notice that
there is a button called "Snapshot". Press it and a text file of what
appears in that window will be created in the snapshot folder of
UI-View. Send that file as an attachment so that others can see what
you see. It's pretty cool, actually.

I Love this stuff! :o)

I had an "accident" a few days ago -- during a format and reload, I lost
all my email. Everything, archives for several years, email addresses, you
name it, it's gone.

Roger, if you're still monitoring this list, I also lost the registration
information for UI-View32. Could you possibly resent it for me?

Thanks,
Earl
KD5XB

Yep, lost all my sig files, too! <G>

Rendered body type: text/plain

folks,

I *finally* did Roger some due diligence and paid my dues to him. And as a
result, I am finally up and running with UI-View 1.61 32-bit registered... I
even installed the UI-Path add-on that Rich was touting about, but I think I
either need some instruction or some time to figure things out myself. One
of the problems I have, is that since I'm running 2 instances of UI-View at
the same time, UIPath doesn't know to distinguish and connects to just the
last one loaded. (Workaround: load UIPath before loading the 2-mts instance
of UIView).

For the rest, it looks a lot nicer and I really like it.

By the way, there is either nobody active on BEACONet^31, or the condx are
really bad.... I haven't heard anybody for the last 48 hours.

Hope to see you all at 28.131+1500 in BEACONet^31 this weekend!!!

Hi all

Do to bad WX & computer work my beacon will be off the air till further
notice. I am building a new main household computer and I am temporarily
steeling parts from my ham shack computers.

UI-Path update It crashed again. It ran for about 4 days 24/7. The band was
dead and I had nothing to report so I did not try to copy from the
transmission table until after UI-path had been running for a wile. I got
that same error #5 message. Unless someone else wants to pick up the ball Ill
contact Andy after I get my shack computer running again.

Today's BEACONet^31 report. Local time

Rich

Rendered body type: text/plain

I've spent the last hour or so digging through Part 97 (and checking
for any possible updates). From everything I've read so far, I'm glad
I only enable the system while I'm at or around the computer.

Running a system under automatic control on 10m is only permitted
between 28.2 and 28.3 MHz. Even if you're liberal as to how you
actually define the boundaries of "control point" [97.3.a.13], I think
everyone would agree that being at work is generally beyond that point
(unless you're a home office type and sit at the computer all day).

Anyway, the point I'm trying to make is that if anyone is going to run
24/7, we should probably consider moving up into the 28.2-28.3 segment.
What about Section 97.221? It specifically excludes beacons
[97.221.a].

The only way I can see APRS operating where it is has to do with
97.219, in case anyone really cares...

If someone has any better info, I'd really appreciate getting a copy!

Karl, N3APZ

I should have specified BEACONet^31 in my last message.

The AX.25 format does forward messages, kinda.

You might want to subscribe to the UI-View reflector on Yahoogroups. Andy,
the author of UIPath, and Roger, G4IDE, both subscribe to that.

I'm discussing the use of UIPath with Andy via that system at the moment, so
it would be easy to discuss other qustions and requests on there as well.
Rather than via Propnet and back and forth to UI-View. HI!

Hope this helps de Dave (G0DJA)
I would prefer that this message was not copied to the Packet BBS system
from anywhere in the world by anyone other than myself, should I choose to
do this, thank you.

The only thing that BEACONet^31 doesn't do, that BEACONet does do is
digipeat. Messages and RFGated frames can be passed, just like on
AX.25, albeit a lot slower. :o)

However...given the possibility of running true tx-only stations (a la
digital sound recorders hooked up to transmitters), the long-range issue
of a QSY into the beacon sub-band may still be in order. I don't see a
conflict for now, though...but can certainly be convinced otherwise
(what's the big deal to move the radio dial, after all? <grin>).

Rendered body type: text/plain

Hi folks,

after some browsing over the band, I found some PSK31 activity just now and
I logged (and worked !!) the following stations: (copying from my snapshot,
I am running BEACONET^31 at my other computer)

LU1DVE/M   [FF57NA]   5178.4 Miles   Aug. 4, 2001 13:27 EDT
LW5HBE   [FF78SR]   5077.0 Miles   Aug. 4, 2001 13:05 EDT

Where are all the BEACONetters? What would it take to get a LU station to
participate? Translate the QST article and publish it in CQ-LU (or whatever
their monthly club magazine is)??

Muchas gracias y setentitres,

--Ramon W1/PA3EUG [FN42KI] Boston, MA, waiting for DX....

Yup. Lots of transequatorial stuff. Very little else. The CW subband
is full of Central and South America from here in NY...but very little
anywhere else. Fascinating! 'hope to have the vertical back up this
weekend...and back on 28.131 BEACONet^31.

Glad you made it back, Ev!

I haven't heard a peep as far as BEACONet goes, but the K5AB cw beacon
was pretty strong a little while ago. Guess everyone is out doing
other stuff.

Thanks, Karl! Yeah...I'm afraid that any "staffed" activity in the
summertime will drop off in the months of August and early September.
Well...I'm on and transmitting...let's see what the future brings us.
:o)

Hi Ev,

Had been off the air for a while - shut down BEACONet^31 the other night
while installing a scanner on my computer and decided to stay off until
things calmed down (getting ready to take our daughter to college on August
12 - going to be a TOUGH time for my wife and me plus our daughter is
getting NERVOUS too).

Just connected things back up and immediately (0102Z Aug 05) received your
BEACONet^31 - VERY strong!

Bob - KC5DUI - EM26WE

While several stations have mentioned copying me on Beaconet^31 this
weekend, I've been unable to capture a single other station. Part of the
problem is a strong signal that I am receiving centered right on 28.131. It
appears as a series of vertical bars spaced about 60 hz apart on the
waterfall display. Hope you'll forgive my digital ignorance, but I'm real
curious as to what the signal is and why it is on continuosly for hours at
a time. Can any one help me out on this one??

Nonetheless, I'll keep the rig on while I'm home tomorrow and hope to catch
a few of you again.

I get the same thing, especially during high humidity periods (the last
2 days have been brutal). It's puzzling because I leave the a/c on in
the apartment. Since the humidity inside should be relatively
constant, I'm guessing it may be coming from the high-tension lines
about 1/4 mile away. It appears as a wideband comb on my display.

Do you have any high-tension lines in your area?

Karl, N3APZ

p.s. Xmtr is off until I get back from work. I'm leaving the rcvr on
just to see if I catch anyone else...

Good question, Dave. I've seen the same thing from time to time, but
don't know what it is. Turn up the speaker and let's see what it sounds
like...alternatively, tune around and see what other various types of
signals look like on the waterfall and let us know.

I wonder if the DSP "eliminates" the qrm.

Rendered body type: text/plain

They work if followed. If anyone is having problems with BEACONet^31,
hit the web-site at http://go.to/BEACONet and follow the hyperlinks as
follows:

```
Introduction | The Lingo   -- to understand the difference between
                             BEACONet and BEACONet^31
Construction | PSK31+...   -- to get the software installed
Configuration| BEACONet^31 -- to configure it properly

Join us on 28.131 USB!  The bands are open and we are waiting for your
call(sign). :o)

```

Have not had a catch on 53.53 since late June. My BeacoNet 6m is running most 24/7 as weather dictates. Anyone else belting it out on 6? Know Es is pretty well finished but we should still be having some tropo during summer - had some FM activity from Great Lakes and points east last weekend. I switch to ISS from time to time on a pass and catching and hitting it at 1000 mile mark so know the old TNC is still going OK.

I run APRS on 53.53000 24/7. Had an extra TNC and rig so I just hooked them up. I believe Bruce copied me once or twice, that really was a thrill! Still trying!

Rendered body type: text/plain

We'll have a ball...why not you, too? Meteor mode is built into APRSdos
and UI-View. A fairly lame but usable version is available for any
other program the uses TNC's as their "modem", and was published in
November 1999 QST (just don't forget to issue the FULLDUP ON
command...which was omitted from the article).

The Frequency: 28.128 MHz USB, 147.585 MHz FM, 53.530 MHz FM
The Date: Starting August 10, ending August 14 (+/- successes)
The equipment: Success has been has with *tiny* stations, but
               this is a good example of "more is more" when it
               comes to RF output, and "medium is best" when it
               comes to antennas. More on this later.
The background: Find it at http://go.to/BEACONet | Participation |
                successes. You'll see some truly amazing screen-
                shots and re-creations of reported events.
How to "Register": http://go.to/METEORegistry and tell others of
                   your intent to play. This will help those
                   folks who have beams to know where to point!

Join-in on the fun!

Ev, W2EV

Well at least they're being heard! I'm getting bits of DUI right now.
Had him great earlier, but couldn't get ui-view32 running right. When
I did, psksrv was in slo-mo. Had to reboot and now it's much more
better.

I guess a vertical loop almost at ground level, on an apartment
balcony-like thing isn't a very god setup. The only positive to it is
when people start hearing me, they'll know the band is wide open...

When I grow up, I want a real station!

Rendered body type: text/plain

Ev - started up WinPSKse with mic plugged into card - mic sitting in
front of my Hallicrafters SR-150. The old SR-150 is pretty stable once
it has been on for about an hour. Caught you at 18:34Z and again just
now at 18:38. Weak, but got it. Antenna is B&W 1.8-30 broadband folded
dipole in inverted Vee at about 30 feet in center. Was going to do a
cut and paste but it won't come across from WinPSK. See you are sending
upper and lower case.

John,

Use the 3-disk links under UI-View16 (File1, File2, File3). That
should take care of the missing .ocx problem.

Rendered body type: text/plain

16 folks registered for Perseids so far, good luck!

This is a reminder for those participating in the Perseids MS event, the
METEORegistry web page is available. The purpose of registering is to
provide a real-time list of participants to expedite communication and
increase the chances of success. There are 9 questions, it takes about 1
minute to complete. The Perseids MS event is from July 22 to Aug 24 with a
Aug 12 peak.

Click on the URL below and then click on the Register Here link.
http://w9if.net/cgi-bin/beaconet/main.pl

good luck,
Rich Parry

Rendered body type: text/plain

http://comets.amsmeteors.org/meteors/showers/perseids.html

Get ready for a great time. This shower favors 6- and 2-meter operation
as it contains a large volume of rocks (a large number of potential
ionizing streaks), at "medium" speed (the ionizing streaks will probably
not propagate upper VHF/UHF as well because they aren't as dense as the
Leonids in November).

Register your intent to play on http://go.to/METEORegistry
Get ready for playing by downloading and installing UI-View, as well as
getting configuration information from http://go.to/BEACONet

This event is made for BEACONet (AX.25 @ 1200 baud) ... not BEACONet^31
(PSK31).

See you "on the rocks" (so to speak <g>).

This corresponds well to reports from the SSB guys, who said the band
was open around the same time, too. This stuff is sooooo cool. :o)

79. [propnet] Perseids: Any thoughts to running an experiment?

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Tue, 07 Aug 2001 18:40:49 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-28722-2001.08.07-18.05.21--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Any thoughts to running with me on 50.450 MHz USB @ 1200 baud? Or even
144.300 MHz USB @ 1200 baud? I'm curious to find out if meteor-induced
doppler or phase shift to received audio would cause packets to be
unreadable.

I'm also interested in trying to engage some of the SSB/CW folks in our
work. :o)

Anyone have any thoughts? I'm thinking about making an "announcement"
to this effect in a day or so...not as a permanent move, but as a mode
to experiment a bit and engage another faction of our fraternity.

I'd be willing, but the frequency synch is
problematic. Specifically, I don't think I've EVER seen two 6-meter rigs
that agree on a frequency! If you have a solution, Ev, I'm all for it, as
I think the results would be dramatically different.

81. [propnet] AstroAlert: Another Moonlit Perseid Display

From: Earl Needham <needhame@yucca.net>
Date: Tue, 07 Aug 2001 17:40:12 -0600
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-28738-2001.08.07-19.03.25--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

The annual Perseid meteor shower will reach maximum activity Sunday
morning August 12. Like last year the moon will be in the sky reducing
the number of meteors seen. Last year there was an small opportunity
late in the morning to view the Perseids in a dark sky once the moon
set. Observers who watched during this period remarked that the display
was far richer than that seen in 1999 despite a bright aurora display.
This year the moon free period lies between dusk and moonrise on
Saturday August 11. This time will be approximately 9 pm local daylight
time (2100) and midnight depending on your location. At this time of
night the Perseid radiant, the area of the sky the meteors seem to come
from, will lie low in the northern sky. For the Southern Hemisphere and
north tropical areas it will actually be located below the horizon and
no activity can be seen from there until later in the night. With the
radiant lying so low in the sky from north temperate areas the horizon
will block a great majority of the Perseid activity. The Perseids that

do travel upwards will just be skimming the upper regions of the atmosphere allowing them to last several seconds and create a long streak across the sky. These "earthgrazers" are exciting to see but are only seen once or twice per hour.

The the night progresses the Perseid radiant will rise higher into the northeastern sky. Those living in high northern latitudes have the advantage of the radiant being located higher in their sky. Unfortunately morning twilight will also arrive earlier for them cutting short their show. North tropical and north temperate latitudes are best suited to see the display with the lower radiant altitudes being offset by a longer night as one proceeds southward. As one approaches the equator the Perseid radiant does not rise much higher than 30 degrees before morning twilight interferes. This again limits the amount of activity seen. It gets worse as one travels past the equator into the Southern Hemisphere. From 30 degrees south the radiant rises only 3 degrees high so the best observers in Australia, South Africa, and southern South America can expect is 2-3 Perseids per hour.

What can mid northern latitude observers expect to see this year? Since there will be moonlight in the morning sky it definitely will not be as impressive as the 2000 display. Activity will increase as the night progresses as the radiant rises higher into the sky. The moon will rise around midnight and will be located high in the southeastern sky during the last dark hour before morning twilight. This last dark hour before morning twilight (approximately 4 to 5am on August 12) will offer the most activity. To offset the bright moonlight it would be advisable to face away from the moon toward the north or northwest. One should look high enough into the sky so that the bottom of their field of view is not wasted on the ground. This means that most people should view 60-70 degrees high (90 being straight up). In similar circumstances in 1982 I was able to count up to 38 Perseids per hour from a rural observing site. Those who watch from urban areas or experience hazy skies will see less activity.

Meteor photography is also possible if you aim the camera far away from the moon. Use slow to medium speed film such as ISO 100 to 400. A manual single lens reflex camera is necessary as you need to keep the shutter open for 5-10 minutes. Aim the camera so that the bottom of the frame lies just above the horizon. A good direction to aim would be due north as the star trails are least in this direction. The stars will show parallel paths on your photo. Any meteor caught on film will cross these paths and will be easy to find. A meteor must be as bright as the brightest stars to be recorded on film. Even during the Perseids the rate of success averages only 1 meteor per roll of 24 exposures. It's all a matter of luck! Advanced meteor photographers often use a motor driven mount to prevent the stars from trailing in their photos. Therefore any streak on the photo could be a meteor or a man-made satellite.

Sky & Telescope, the AMS, and the International Meteor Organization are interested in your Perseid counts. The basic information needed is your location, the time you watched, the number of Perseids seen, the number of other meteors seen, and the sky conditions (clouds, limiting magnitude). You may also try to estimate the brightness of each meteor by comparing it to stars of a known magnitude. Reports can be sent to me at:

lunro.imo.usa@home.com

and to Sky & Telescope at: observers@skypub.com

For more information on observing meteors visit the Sky & Telescope Web Pages at: http://www.skypub.com/sights/meteors/meteorwatch.html Although intended primarily for the Leonid meteor shower, this guide is useful for all meteor observing sessions.

A weekly preview of meteor activity is also published each Thursday at: http://www.amsmeteors.org/lunsford/

Clear Skies!

That's part of the experiment. We've proven that 1200 baud USB works on
10-meters when all stations are "blind" to eachother, until the band
opens. It would be interesting to find out if 1200 baud USB can work
with the addition of meteor-induced doppler *and* the greater
instability of transceivers at twice the frequency.

Add to that, a frequency that is "lower" in the band, where all the
SSB/CW operators hang-out...and we have the possibility of getting alot
of newcomers to BEACONet's meteor mode.

Any other comments, anyone?

Ev, W2EV

Rendered body type: text/plain

Hi all
The propagation beacon of South Carolina "WD4RBX" is back on the air again. I finished the main computer upgrade Sunday. I still have some software to install but this won't affect BEACOnet operation. I now have 2 good computers in the ham shack (got both of them running today) with BEACOnet wrote all over them. I have to admit the old 233 MHz computers pail compared to this 1.1 Gig Machine. It is state of the art using DDR memory both on the main board and video card. The FSB is running at 266 MHz. The video card has 64 MB of RAM and the main board 128 MB & the hard drive is ATA 100. I have to admit that utilizing the USB port for the keyboard & mouse is wonderful. I use SETI as a bench mark for my computer. The old machine would take 400 hours to run one data unit the new machine takes 18 hours. :-))

Back to BEACOnet.

I have BEACOnet^31 running as of about 2:30 eastern.

Rich
WD4RBX

Better do some checking -- my 1 GHz Athlon, with 512 MB RAM, does a SETI WU in a little less than 7 hours, I suspect your machine should give similar results.

Rendered body type: text/plain

What does it take to participate? Not much! The beauty of BEACONet is
that you cast your 'net (24-hours a day) and see what comes your way!
There are several aspects to meteor mode (and a special experiment to
try, if you are so inclined...it's at the end).

2-meter FM participation
 - 147.585 MHz @ 1200 baud (that's somewhere around 7200 letters
                            per minute, for folks who think in
                            those terms)
 - small/moderate beam (10-elements or less)
 - 100 watts (but more is always better for meteor work)
 - Minimally, an ERP of 400-watts (100-watts to a 4-element beam)
 - Read about it at http://go.to/BEACONet and follow the links:
   | <Construction> to assemble your BEACONet hardware & software
   | <Configuration> to configure UI-View for Burst mode
   | <Participation> | <Successes> to see what others have done
                                  using this mode in the past
 - Visit http://go.to/METEORegistry to "register" your intent to
   participate, so others will know who to look for and point their
   antennas toward -- if they are using directional antennas.

6-meter FM participation
 - 53.530 MHz @ 1200 baud
 - dipole or better plus 100-watts (more is always better here)
 - Minimally, an ERP of 100-watts
 - same links as shown above, just tune to a different frequency!

===== and now for the experiment ================================
FM has been used in the past for a number of reasons, including the fact
that the doppler associated with meteor trail reflection didn't seem to

affect the superimposed audio...allowing easy decoding of the signal
without much critical tuning. This year, a few pioneering experimenters
are going to try meteor mode on "SSB-packet" (the setup is the same, the
difference is the frequency and the transceiver's "mode" switch).

2-meter SSB experiment
 - 144.288 USB @ 1200 baud
 - all of the rest of the parameters are the same as noted in the
   "FM" section at the top of this note with the following
   exception: when registering with http://go.to/METEORegistry be
   sure to note SSB operation in the comments field

6-meter SSB experiment
 - 50.450 USB @ 1200 baud
 - all of the rest of the parameters are the same as above.

I'm hoping that this doesn't dilute our participation too much out to
too many different frequencies...but what an opportunity to do some very
interesting work! :o)

Join us! I will be powering up on August 10th and running until the
13th.

Ev, W2EV

Ev, the experimental part looks great, except for what I would call a major
omission. Those up an running on 10m should be on. I believe that there
are 10m BEACONet stations within MS range of each other. It would be
especially interesting to collect PSK31 results on 10. PSK31 stations on 10
should run overnight during the peak if there's another station within
single hop range.

I like your thinking Scott!

It would be easy considering the possibility of 1000 meteors per hour not to
mention the Earth grazers that would produce long trails that last for many
seconds. Just let your BEACOnet^31 set up run as is and see what happens. One
would have to look at the terminal window to see if any partial beacons came
in or the PSK31svr main window. Another though might be to set up PSK31svr
preamble with your call and grid.

Afternoon all

The only beaconet station I've heard the last couple of days has been
LU9MBK.

Other than that, nada, save for K5BTV calling CQ close enough for
psksrv to lock on to him. Too bad I was busy in another room at the
time...

Unfortuantely I'll miss the meteor event. I'm leaving town tomorrow
morning (going back home to the "real" qth to visit family) and won't
be back until next Thursday morning. I'm looking forward to reading
some very interesting email when I get back.

I am already up and running 24/7..... 28.131+1500 PSK31

The problem of PSK31 is, that transmit times in PSK31 are relatively
long. Therefore, you'd probably only see partials.

We need to set up a transmit schedule based on quadrants or something,
like we did this before for... (I don't remember what it was for). This
time, we need to use a 1-minute or longer schedule because of the
looooooooooong PSk31 transmission times, which can easily be 30-45
seconds. One single transmission with a beacon that repeats the string
"PA3EUG>HY0F0A [FN42KI]" enough times to fill the 45 seconds would be
optimal.

If you are using UIView32 (and it's worth spending the $17 or whatever
GBP 10 is worth nowadays as it has a lot of cool features the
unregistered version didn't have), you shouldn't forget to sync your PC
clock using the File -> Internet Time Client option at least once a day
or so during the event.

So when is the peak of the event again? What's the window in which we
should switch to this mode?

Meteor spectacle to shower sky

  WASHINGTON, Aug. 9 (UPI) -- The Perseid meteor shower, an annual celestial event beloved by millions of sky watchers around the world, will return to the evening sky this week. Astronomers said it will reach its fiery peak late on the night of Aug. 11.

  Despite moonlight interference, North Americans are positioned to get the best view of a show that does not require anything but the unaided eye.

  "The Perseid meteor shower is one of the best because you can expect to see about one meteor per minute," Noreen Grice, operations coordinator for the Charles Hayden Planetarium at the Boston Museum of Science, told United Press International.

I'm the last one who would poo-pooh an idea to experiment. My gut tells me that there are two things that heavily disfavor the use of ^31:

o The fast doppler shift that meteor pings exhibit may be difficult
  to lock on with enough time to decode, let alone track once locked
o Pings being of short duration, PSK31 being looooong in duration
  seem to be at odds with eachother

I might suggest that 10-meter efforts be better spend on standard BEACONet on 28.128 USB AX.25 @ 1200 baud. Then again...ya never know. :o)

Hi All

This is a partial report. I left the door to the shack open last night and our cat wanted to get in on the BEACOnet^31 project. Unfortunately her command of windows has gotten quite rusty no to mention 4 paw typing. I have tried to explain to her that she needs to be a licensed ham to use the equipment but I am sure she forgot. I have no idea as to when she crashed the computer. Here is what's left of my catch.

Rendered body type: text/plain

Ev, et. al.

My suggestion of PSK31 was made without knowledge of some of the actual parameters, i.e., I knew the transmissions were long but I didn't know they were that long. Is there any way to shorten things up? A PSK31 meteor mode? (Probably not, as you can shorten your transmitted information, but I'm guessing that there's not much you can do about the time required for clock recovery.) And your suggestion of using AX.25 instead reminded me that a performance baseline for this mode on 10m has not been established and would be useful in evaluating the results of more radical approaches to MS, such as PSK31.

That said, consider the following. Short pings? Maybe. Unfortunately, I can't remember exactly how meteor echo duration scales with frequency and don't have a reference handy. But the plasma frequency scales linearly with electron concentration. This means that the lower you go in frequency, the longer the time you can let the trail diffuse before you lose signal. On the other hand, the diffusion process will slow down as diffusion progresses (I believe exponentially). Bottom line, you get a lot more time on 10 than on 2. Somewhere in the HF range, the term "ping" begins to lose it's relevance. And in response to the Doppler question, the shift is proportional to carrier frequency so that as the frequency decreases, so does the shift in Hz. The point is that decreasing frequency mitigates in favor of longer transmissions. But again, I'm not in a position to put numbers to what I'm saying at the moment. So rather than keep stabbing at exact physics without a full set of equations and input parameters, I will resort to the anecdotal...

Over the course of two or three years while living near the Utah - Idaho border, one component of what was then a yearly ritual of Perseid observations involved parking a receiver on 20 MHz all night in order to catch WWV via MS. Even for reflection from meteor heights (lower E region), Fort Collins -> Logan was a fairly high angle path (i.e., you have less time against diffusion of the trail than on a low angle path) and yet there were times when WWV was audible for minutes at a time (with lots of QSB of course.) And yes, you could hear the signal fade as the trail diffused but before it dropped into the noise you could hear another rock come in to take up the slack. Interesting listening. Now, 20 MHz is not 28. But this was also a tough path. And also the fact that multiple trails seemed to be involved in these minutes long openings speaks to the potential for multipath and the fact the PSK is not as robust against ISI as FSK. On the other hand, at HF you don't get the rapid QSB during the first few seconds of trail diffusion that is observed at higher frequencies (as the trail expands through the first few Fresnel zones, since a Fresnel zone is a lot bigger at decametric wavelengths.) In fact, at 20 MHz, the pings aren't very dramatic compared to what they sound like on VHF. Bottom line here, there are lots of factors mitigating in favor and also a considerable number against MS PSK31 on 10. But given the right path geometry, this mode may deliver up some real surprises.

But considering the state of the operational BEACONet on 10 and in light of this discussion, especially the lack of AX.25 baseline data, I'd like to propose the following: 10m stations should run MS mode AX.25 up through the 11th. By the morning of the 12th, the results of the previous night should indicate where the most favorable paths for 10m MS lie within the network. If the stations at the ends of this path or paths are equipped, maybe they could alternate (say hourly) AX.25 and PSK31 on the night of the 12th.

But above all, my plea would be, DON'T NEGLECT 10m during the event!! Whatever your mode of choice!

73, Scott K7LU

P.S. Some may ask how I'm sure I was hearing WWV via MS if the propagation was so uncharacteristic of MS at VHF. As evidence, I can offer that 20 MHz WWV propagation was observed on the night of the peak over at least 2 or 3 years. The receiver was also left on 20 MHz overnight on a few days pre-peak and post-peak with no such propagation observed.

Hi Rich,

Have had the BEACONet^31 shutdown for the last week due to sporadic
thunderstorms coming through the area. Was out making a delivery this
morning and decided since I'd be in the van for about 45 minutes each way
I'd hook the the RS HTX up and see what I could find. Between 1415-1445Z
heard your CW ID twice but couldn't hear any PSK31. On the way back,
1605-1640Z heard several PSK31 transmissions (probably yours) and a couple
of your CW IDs. Have a RS CB antenna cut down to 10M stuck on the roof of
the van.

Just wanted to let you know you were reaching NW Arkansas (was driving
Interstate 540 from Springdale north to Pea Ridge and back).

Will be taking our daughter off to college this weekend so will be shut down
until sometime next week if the wx is nice.

Bob - KC5DUI - EM26WE

Rendered body type: text/plain

Got a friend who just got his ham ticket. he asked me today for some advice on TNC's.

You guys are more up-to-date on what's available, he wants to order one today..like..now..

I told him I'd run it by the groups for recommendations.

Want to know what's best price/performance bet, and where its available, and how much $

Oh, used is ok too....providing its readily available...hes got cash in hand. No junkers, fixer-uppers.

Thanks..you will be helping a new ham out with this info.

Have a serious problem here -- the motherboard appears to have died. I'll have to try and find one Monday afternoon, as everything is closed for the weekend.

I bought a couple of "racks" (for lack of a better term) to hold a hard drive and make a portable from it. In addition, I found a 256 MB DIMM (PC133) for $35, so I bought that, too. When I installed the DIMM and one of the racks and turned the computer back on, I had a purple screen, then it was green, then -- well, it was just crazy. At first I thought it was simply the video card, but later tried the PCI video card instead of the AGP one and it shows what it should, but only for a short time at which point the machine locks us solid. I'm posting this from the old P-133/MMX...Thankfully it's still here!

Hope to be back with the Athlon Monday night or Tuesday afternoon -- I've been down for about 24 hours at this point. Unfortunately, it doesnt look good for the Perseids.

118. [propnet] Re: UIview Meteor Scatter Burst Mode Problem

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Sun, 12 Aug 2001 16:29:04 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-29557-2001.08.12-15.53.31--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

The only reason for a short "burst" is that the buffer in your TNC is
small. This may be the case with a KPC-2. There are a couple of
"work-arounds".

o Double your TX time from 15 seconds to 30 seconds...knowing full
  well that your actual TX time may increas to only 8-seconds.

If that works, try setting TX to 60-seconds. You may get 15 out of it.
:o)

UI-View calculates how many packets to send, based on your packet length
and amount of time you've specified the TX should take. Therefore, if
your TNC has a small buffer, you need to fool it into thinking you want
to transmit for a longer period of time than you actually do.

Give that a quick try and let us know what happens.

Alternatively, some folks have known UI-View to work better on older
TNC's simply by opening a terminal window (!). It's a menu choice at
the top of the screen.

The KPC-2 fits both issues...it has a small buffer *and* is a fairly old
TNC. :o)

Again, Give it a try and let us know what you find!
Ev, W2EV

To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-29585-2001.08.12-19.25.28--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Early reports are
  mixed. Most observers saw no more than 15
 to 30 meteors per hour -- a sparse showing
by Perseid standards. Fortunately, the sightings included a good
number of beautiful Perseid Earthgrazers. Although the meteor
shower probably peaked on Sunday morning, it's not finished.
Earth is still inside the debris stream from comet Swift-Tuttle and
there may be even more shooting stars between 10 p.m. local time
 Sunday and dawn on Monday.

Hi Ev

Ill give it a try tonight.
50.450 & 144.288 USB @ 1200 baud.

I am setting up the gear now and If I hear back from you before 10:00 PM
Eastern Ill leave it running.

6 meters will be a stroke of luck or one heck of a record. 6 elements ant 14
watts.
2 meters will be fine. Long boom yagi and 100 Watts.

Hey Tim,

Glad to see I'm being heard. Two questions, though:
1) What is your QTH? (543 miles @ 101 deg, somewhere in CT?)
2) Is the time listed EDT or UTC?

I'm located northwest of Detroit (yes, just a couple miles from Ray, K8RAY),
in Farmington, MI. Station is running 180w to a 4-element quad @ 40'
azimuth 90 degrees. Just nudged it to -2 to try to hit Ev tonight.

Rendered body type: text/plain

I've noticed some interesting behavior from my HH2 since upgrading to 24025J.

First --

The other day, I was returning from Amarillo when I noticed this. The digimeter was at 91 or 92, until I drove out of range of the digis. I was out of range for some 85 or 90 miles, and took about 1+15 to travel that distance. The whole time, the digimeter stayed at 90, until I came within range of the Melrose, NM digi, at which time it fell all the way from 90 to 01. Normal?

Second --

I set my status to be HamHUD II 24025j. I notice WinAPRS doesn't pick this up as a status packet, apparently because of the lack of a > at the start of the packet. I just checked, thinking the obvious place for a status text was actually the TNC BTEXT, but it isn't there, so I gather the HH2 is sending this particular packet. is this the desired format?

Tnx es 7 3

Rendered body type: text/plain

Hi Ev and all

Sorry to report that I did not catch any signals on 2 or 6 meters but some
useful information was obtained.

First of all my 6 meter rig is truly JUNK. I transmitted with less then a
watt all night. I do have a work around for this that will bring the power
out to 25 watts. I feel confident that 25 watts and my 6 element will be
plenty for meteor work. If you check the BEACOnet record book for 6 meters I
was heard running 14 watts and a J pole. I also found that on 50.450 I have a
computer birdie weak but consistent and my monitor could raise the dead if I
left it on. Next time we might want to try another frequency. 50.431 is very
quiet with all the gear running.

Although I feel confident that I was on frequency, 2 meter SSB was truly a
tune and play experiment. Beyond that I had no known problems with the
equipment. My solar power happily supplied over 100 watts to the station all
night and when I checked (under full load) this morning the batteries were at
11.7 volts. Not bad for 7 year old golf cart batteries. I have to admit that
the batteries were allowed to reach full charge weeks before the meteor
shower and just sat there at float voltage.

If there is someone that is close enough to me (EM84) that has 2 meter SSB I
would like to run some BEACOnet test with you.

Not a problem. The rigs have been on all day in RX mode because I did not
know when you stooped (or if) transmitting. I am not sure about the battery
bank because of a cloudy day so Ill stay in RX mode till you decide to stop
trying.

The wife turned off the transmitter to watch a little Sesame Street.
I'll power up after prime time tonight and run until noon or so
tomorrow.

Thanks!
Ev

Well, I got my machine running again, just about in time to miss the
Perseids! Actually, I got it running a few days ago, but I couldn't seem
to get AGWPE to talk to my 6-meter TNC over on COM 2. Was getting pretty
frustrated about it, so I just left it for a few days.

        This morning, I was in the BIOS setup screen, and I found where the tech
over in Amarillo the other day TURNED COM 2 OFF! It seems to be working
again...

>From http://www.wm7d.net:

Geophysical Activity Forecast: The geomagnetic field is expected to be
quiet to unsettled for the first day of the forecast period. Thereafter,
an onset of magnetic storming is anticipated from the CME activity of 14
August, with active to minor storm conditions and isolated major storm
periods possible at higher latitudes. Conditions are expected to return
to predominantly unsettled levels by day three. Moderate to high flux
levels for greater than 2 MeV electron flux at geosynchronous orbit are
also possible throughout the period.

Rendered body type: text/plain

Hi all

A while back Ramon had brought to light that PSK31svr needs DE yourcall [your
grid] to auto capture an incoming beacon. Today I was getting a complete
beacon from both Ramon and Ev. At first neither of them plotted on my map.
Ev's beacon never plotted. When the band picked up Ramon's beacon did plot
when it felt like it but no capture in PSK31svr. Also I noticed that my
beacon was not auto captured by PSK31svr. I new that It did in the before
time. This was driving me nuts because I had no idea as to how I had
previously set up my beacon that facilitated capture.

What I found

After reading the help files again in UI-View and PSK31svr I started
experimenting. What I wanted my beacon to do is TX a signal that looked
something like this. DE WD4RBX [EM84NM] "personality" without any wearied
caricatures in between. If you all remember a while back we were adding this
text to our "beacon comment" after [grid]. This is the key! PSK31svr looks
for MYCALL [grid square] if it sees it then it recognizes it a valid (call)
beacon and captures it.

Recommendation

Add DE MYCALL [MYGRID] to your beacon comment in UI-View as we did in the
past. I could not find any other way. Maybe you can! I think that this will
give us a triple play. If you would like to send out your E-mail address with
your beacon then you could set it up in your states text in UI-View. Lets
experiment & see!

Rich

As I was preparing to Rover for this weekend's 10-GHz contest (there are
WAY too many aspects to this hobby!), I was startled to notice that I
was still decoding WD4RBX and N2VRJ in the time between midnight and
2:00 am! Interestingly...very few other signals on the band.

Rich...your waterfall is quite wide here, with several bands
nearby...I'll check my system a bit later...but you may want to check
your mic gain and back it down a little? Several times PSK31srv
"locked" on a secondary band and failed to decode your signal, but when

I manually clicked on it, all was well.

Jesse...you were weak, but quite decodable. Such is the power of ^31
:o) It's good to have you on the air.

Interestingly...it was all N-S...then I checked 6-meter SSB...and
noticed aurora returns...THAT explains the lack of E-W stuff.

Fascinating!

Ev, W2EV

Over the next few days I'll be testing two different antennas, my quasi-loop and a loaded vertical. I'd appreciate any reports, and if possible, times heard. I plan on changing antennas about every 2 hours starting Monday morning, 8 AM (barring any club wielding neighbors).

Karl, N3APZ

I had hoped to be sent up for the Perseids last weekend but had problems getting the AGW Packet Engine and UI-View to work on my computer. Don't think it was a problem with the software but more the clutter picked up after several years of adding and removing software from my computer. Ended up reinstalling my operating system and reformatting the hard drive -not as much of a problem as it sounds with a zip drive to back up all the data files I needed to keep.

Anyways, I'm up and running on 28.128 but haven't picked up any other BEACONet stations this weekend.

Jesse makes an interesting observation. It seems that our activity on
28.131 USB (using PSK31srv) has gathered some interest from others.
>From time-to-time, I also see others CQing in the passband (notice, no
BEACONet^31 'ownership' of the passband assumed <smile>).

If you haven't done so already, make sure that your preamble text reads
as follows (or includes this, in addition to whatever else is there):

HTTP://GO.TO/BEACONET

Anyone "fast on the draw" in selecting a BEACONet^31 waterfall stream,
but not familiar with the project, will benefit.

Now, a question: does anyone know if it is possible to either start the
preamble with n-seconds of "idle" or embed n-seconds of "idle" at the
end of a transmission? It would be nice to do that to get meaningful
IMD reports.

Welcome back, Dave! I wondered how you were doing. :o) For what it's
worth, I've had problems with resources, since moving to WindowsME. I'm
just about ready to fall-back to Win98se. I can easily be down to 58%
within a couple of days of operation...then things lock up...and I don't

know it for several days. I've missed some of the best opportunities on
6-meter BEACONet because of that. :o(

Anyway...I'd be curious to see if you are able to switch between
BEACONet and BEACONet^31 to see if there's much of a difference in
reception sensitivity using AGWPE on the AX.25 side...if you can.

We've got about a half-dozen actively-transmitting folks on each mode in
the USA right now...showing alot of useful data (and arguably a much
more detailed 'map' of 10-meter propagation conditions than any other
system in use).

I am going to have to look into this. I think that I have a creep problem

with the sound card audio out. I set the power out to about 50 watts and it
was at about 75 watts this morning. Cant blame the cat for this one :-) I am
going to put my PEP meter in line so I can be more accurate.

Hi Ev

One of the BEACOneters had made a comparison using a TNC and AGWPE. Hopefully
he will see your request and fill us in a bit better.

What I remember from his test is that some times one worked better then the
other but they flip flopped back and forth. Some times the TNC would RX a
station and not AGWPE and vice versa. If I am not mistaken he ended up using
his TNC.

Hi all

I wanted to try and run side by side BEACOnet & BEACOnet^31 this weekend. As
Ev had mentioned earlier we have about 6 AX25 & PSK31 BEACOnet stations on
the air. I felt like I was missing something, propagation that is. So I used
2 radios and one computer. I set BEACOnet^31 TX time to 7 minuets and
BEACOnet TX time to 5. and let them run. Here is what the band did this
weekend.

Check out my funky call and grid that was digi back to me. I want to go to
the beach but this puts me off shore by about 100 miles :-))

Here's my list as 5 pm today. Is this last station for real. I'm
guessing its just a messed up reception. Does anybody know?
I also saw lu5xen had been calling cq, as of yet I haven't found
any email address to contact him.

I have a feeling that what you have received is a screwed up beacon or
someone screwing around. Ill E-mail off list if I can.

179. [propnet] A sad day for BEACONet^31

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Wed, 22 Aug 2001 06:50:36 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-31379-2001.08.22-06.15.35--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I just looked over the latest Radio Shack catalog (just released) and
cannot find the HTX-10 transceiver. This is sad for many reasons:

o BEACONet^31 relies on SSB/CW mode for PSK31srv transmissions
  - there are few inexpensive SSB transceivers for 10-meters now
  - there are almost none for 6- or 2- meters

o Without these building blocks, it will be difficult to maintain
  much of a momentum in further building a deployable BEACONet^31
  network of beacons

Is it possible that I've simply -- somehow -- overlooked it hidden
somewhere in the catalog? <Sigh>

Ev, W2EV

180. [propnet] BEACONet^31 Transmission Formats

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Wed, 22 Aug 2001 07:20:29 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-31385-2001.08.22-06.45.30--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Folks,
Our transmissions are based on the following needs:

o UI-View must be able to decode them
o Embedding of station information in the configuration code
o Punch through as much information in as short of a time as possible

o Give other stations as many opportunities to hear us as possible

Discussion:

o UI-View must be able to decode them
In order for this to take place, our transmissions need to take the
format of and AX.25 packet:
CALL>CONFCODE-#,digi,digi,etc:[GR##ID]comments
The following application to AX.25 is made in our PSK31 operations:
  - CALL must be in capitols (that is how it is spelled out in the
    AX.25 spec). Using lower case there may cause us problems later
    when we attempt to connect our operations together via Internet.
  - CONFCODE must be in capitols, too. Again, this is an AX.25
    requirement.
    + "-#" isn't supported by PSK31srv, so it's tough to include it
  - Digipeating isn't allowed (due to our slow speed), so no
    digi,digi,digi is launched in our frames (like we use HOP2-2 on
    our FM-based stations)
  - [GR##ID] is used because other programs (APRSdos and WinAPRS)
    can be used to receive it, in addition to UI-View.
    + The "[ ]" is required by APRSdos, so we use it
  - comments are kept to a minimum (see next item)

o Embedding of station information in the configuration code
  - Everything one needs to know in order to analyze a reception
    is embedded in the configuration code. Please use it.

o Punch through as much information in as short of a time as possible
  - Use lower-case letters wherever possible
  - *always* use [GR##ID] format -- lat/lon isn't short :o)

o Give other stations as much opportunity to hear us as possible
  - Spread out within a 200hz passband of 1500 and let the scanning
    feature of PSK31srv do it's magic
  - Set "Internet Beacon" interval to no more than 10-minutes
  - Set "Internet Beacon" interval to two decimal places (ie 3.73)
  - Duplicate or triplicate *useful* info in to your transmission:
    + This format will give two chances to get config code info and
      location info through on a "marginal" path:
         W2EV>HY0G03:[fn03xd] w2ev>hy0g03:[fn03xd]
    + This format will give more opportunities for someone to decode
      and icon and callsign, but less chance of passing station
      info for propagation analysis (config code)
         W2EV>HY0G03:[fn03xd] de w2ev fn03xd de w2ev fn03xd

Ev, W2EV

Rendered body type: text/plain

I've exhausted my patience trying to figure out why
UI-View32 keeps sending a timestamp for when I
fire up the program. I wouldn't be much of a problem
except that it interrupts the data string.

Instead of:

N3APZ>HY0DA0:[FN00CK]

UI sends:

N3APZ>HY0DA0:ddhhmmz

Does anyone know how to kill the timestamp without
killing the status line? I'm currently using the status
line to indicate which antenna is being used (loop or
loaded vertical).

Karl, N3APZ

Hello Ev;

Here is some info I dug up...
$129.00 ssb 10 rig by Titan can be found here at least for
now...http://advancedspec.freeyellow.com/

Here are a couple interesting HTX-10 sites with some helpful info...
http://advancedspec.freeyellow.com/10meter.htm
http://www.geocities.com/CapeCanaveral/Lab/6518/htx10.html
http://www.magnumradio.com/Transceivers/10%20Meter/10meter.htm

These look like manufacturers variations of the same radio, pricing seems
to vary, but the 129-229 area seems to be available... Who knows for how
long.. DOug KB8GVQ

Rendered body type: text/plain

I looked over the web sites listed and I would be a bit leery about
purchasing any thing from these companies. They appear to be targeted to
the CB and free band crowd. I saw nothing to indicate these rigs were FCC
type accepted. The Magnum site even lists a 40 meter mono band rig that
covers AM/FM/SSB/CW. Why would anyone design a 40 meter rig and include the
expense of the FM section when that mode is not allowed on 40 meters. I am
sure if I searched long enough, the will be a multitude of info on how to
modify these rig to operate outside the band listed, with a lots of
distortion!!!.

Although the catalog does not list the HTX-10, I believe you can still mail
order it via the web site.

Jeff N7YG

Rendered body type: text/plain

Well I just ordered one of them at the $129.00 figure , the radio
shop which sells it looks ligit enough for me, we shall see... What I do
see is that most amateur radio stores do not want to be in the $129.00 hf
radio market and if we want less expensive radio's, we may need to look at
the "freebander" crowd stores or even converted CB radio's which are
perfectly legal in amateur radio... Icom, Kenwood and Yaesu do not seem to
be interested in this limited market...

         Type acceptance applies to the manufacture and sale of radio's as
far as Amateur Radio, It has nothing to do with USE of radio's in amateur
as Long as we meet the requirements of part 90... You can build anything
you want and use it as long as it's emissions meet part 90..

I searched RS web site and the htx-10 is no longer listed. This radio was
made by other people, these links may help us with who... and likely unless
the manufacturer stops making them completely I see no need to be leery of
twins... Doug KB8GVQ

Doug
I would be interested in hearing your report on the radio you ordered. The prices look good. I just wonder how the performance is. Usually these manufactures who target the CB crowd, cut a lot of corners on the filtering and receiver performance. One of those radios looks like a clone of the old Royce radios from the early 80's with a new digital display. Everything else is in the same place. (use to own on of those radios).

It is a shame that RS chose to discontinue the HTX-10. I remember when I purchased mine, there was a run on these at the time. Seems management at RS need to pay a bit more attention to the market.

Yes I will post an analysis on it's arrival and test. I found a lot of
interesting links to CB versions of the hr2510/2600 series. It looks like
there are lots of options to explore in 10 meters. I also have ordered the
dsp-10 kit parts for 2 meters to assemble and play on 2m ssb etc... It
looks like it will be close to $400.00 +_ but seems very powerful..I'll be
playing.. Doug KB8GVQ

Isn't catalog # 19-1110 the htx-10? It's still there on the web if it
is. I thought it went on sale every other month for $129. Perhaps RS
will eventually stop selling them because we passed the sunspot maximum.

You are absolutely right. Here is the link. I searched for it manually
and could not find it but I did not have a catalog ##
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CT
LG%5F001%5F002%5F001%5F000&product%5Fid=19%2D1110

I stand corrected on my earlier post.. Doug KB8GVQ

I am hearing 1 or 2 different signals on 28.128. one signal that is a good
strong S7, yet this AGW packet engine is not decoding anything. Anyone else
have the same difficulty. It seems with every new release this software get
worse on the ability to receive a weak signal.

I'm at a loss. If you followed the instructions for setup on the web
site, there's no reason for getting anything extraneous. Is this maybe
a status transmission of some sort? Make sure Setup | Status Text |
Interval=0 maybe?

Here's todays report, times are local. Check out the I2EER, it
plots it in the PK grid zone, in the middle of nowhere. But is
the station real? Looked up I2EE, and thats a station in Italy
but is it an active Beaconet station? Anybody Know?

I'll give that a try, but I expect that will kill the entire status line.
I was just hoping to get rid of the relatively useless timestamp
while leaving the status active for my antenna string.

But that's not really important to anyone but me I suppose.
Forgetting what antenna I'm using would indicate more
serious problems than just sending out a timestamp...

Karl, N3APZ

2001-August-23 03:31 11 stations

Callsign	Type	Latitude	Longitude	Miles	Bearing	Last Heard
LU3AVO-2	HF Gateway	34.36.33S	058.31.09W	5525.9	159	Aug 22 19:03
+LU7DAC*	Home	34.33.74S	058.31.92W	5522.8	159	Aug 22 19:02
+LW5EJU*	Home	34.28.27S	058.50.54W	5511.3	160	Aug 22 18:26

Times: EDT
Frequency: 28.128, AX.25
Receive QTH: EN82HL, Farmington, MI (25 miles NW of Detroit)
Digipeated stations were heard via LU3AVO-10.

Interesting propagation- grayline between Farmington, MI and Argentina, then the band shortened up so Rick picked me up a couple hours later (although no receive of WD4RBX here), then even later the band shifts and opens between WD4RBX and Argentina.

I think it would be cool if BeaconNet data could be collected real-time and displayed on a map, showing current and fading paths open between participants. Now that would be a valuable propagation tool.

Hi Jesse,
Does KU5W have a listed email address? Someone needs to let him know to
use [GR##ID] rather than full lat/lon for a better chance of being
decoded (due to shorter transmission time).

Also..."I2EER" looks suspiciously like a Gate'd transmission (from APRS)
from WD4RBX. ;-)

Absolutly agreed. Unfortunately, such a tool doesn't fully exist...but
a first step does. I've been establishing a workstation for just such a
purpose at work (on a fully routable IP address on a T1). Bill Diaz has
written a program called AHub which I've been playing with a bit (and I
guess it's time to send-off a registration fee for so that it stays
active for more than 3 hours at a time <grin>). It is used in the APRS
world, but it includes support for BEACONet's RFONLY alias (very
important to VHF Contest rovers who use our system in a couple of
pockets of activity around the country).

I will try to have this AHub-based LIVExchange(tm) system up for a few
hours over the upcoming weekend for a test to see if anyone else sees
value in establishing such a system on a more permanent basis or not.

Stand by...more info soon.

Ev, W2EV

Should not be so. I am no longer retransmitting AX25 packet on PSK31 freq. I
think that you are right. Cant be sure but It looked like a garbled
transmission from South America.

Hi Ev.....my email address was sent with the beacon, you probably didn't
copy it...KU5W@dixie-net.com.
It is also listed on my profile in QRZ.....
Anyways, I am new at the BeacoNet stuff, and just haven't got all my
software running exactly as needed right now,,but I will get there...
The main problem with the Lat./Lon. was that I couldn't figure out from the
instructions with the UiView program, just how to stop it from sending
it.....The setup instructions told you to put it in, but didn't make it
clear that you had to leave it out if you didn't want it to go over the
air.....
Anyways,, fun, fun, fun.....have been enjoying getting set up for
BeacoNet activites, and will be gettin into the meteor burst part next.....
See you later Ev, et al, ...73 es cul   Cliff KU5W

Thanks Ev.....This is a new venture for me, but am having a lot of fun
setting up software and getting involved with BeacoNet..
Hope to catch all you fellows from time to time...I won't be regular for a
while, can't tie up my computer and equipment just for beacons right
now...maybe later with a dedicated setup...
If you want to see my ugly mug...go to QRZ...my pix is there...hi

Hi Cliff,
Welcome aboard! It's good to have your area of the country represented.

Warmly,
Ev, W2EV

Good job!
```

Storms here all day. Didn't even catch a fragment, but I did manage to
get the computer straightened out (back to 98SE), so the day wasn't
wasted.

Karl, N3APZ
(If it weren't for TV channel 2 in the area, I'd give 6 a try)

Glad to see someone saw my signal today. gave up on trying to put out an
AX25 signal on 28.128. The AGW packet engine will not peacefully co-exist
with my firewall. So back up on PSK 31. Shut it down for the night, but
will bring it back on line about 1230Z and leave it up until propagation
falls out of the T-storms get me.

Jeff N7YG

212. [propnet] Frequency Allocation 53.53

From: Bill Vodall <wa7nwp@yahoo.com>
Date: Fri, 24 Aug 2001 11:38:00 -0700 (PDT)
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-31904-2001.08.24-14.01.12--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I'm in touch with the Western Washington frequency coordinator
about the issue of setting up a 53.53 system.

In this area - that's the output of a coordinated repeater
frequence pair.

Fortunately, there's no local repeater on yet. Unfortunately,
there is a repeater in BC.   I'll listen and see if I
can hear it here, 100 miles south of the border. Probably not,
even if it did happen to get "some" use unlike any of the local
machines.

Anyhow, I need more info before continuing the discussion.

Is there a list of areas where 53.53 is officially recognized
for PropNet?

Is there any area where it's been officially banned?

Any chance somebody has a .POS file of the full and part time
stations on 53.53?   (If not, send me the data and I'll set
one up.)

Thanks,
Bill - WA7NWP

Don't know if there's one set up or not, but I run APRS on 53.530
24/7.

Here's what I send on 6:

Thanks Earl,

You'll be the start. I have a web page thingy that uses .POS
files. I'll put you in there and get it set up and post the
URL for the group "real soon now".

Bill

Hey Earl

How was Lubbock! I use to live there many years ago when I was stationed at
the Air Base, which (I think?) no longer exists. Have they done anything
with that part of town that is west of the loop along 4th and 19th streets?

Pretty desolate after the big tornado that blew through there in the middle
to late 70's.

Next time you are there see if you can raise Cranston WA5TBB on a repeater
and point him in my direction. He will know me by my old call of KD5YG.

73
Jeff N7YG

Hi all

I had an opportunity to see part of the action on 10 Meters today. When I
checked My BACOnet station list I saw that Rich N8QLT had been coming in up
until 21:03. LU3AVO came in at 22:06. Ev W2EV was the first BEACOnet^31 this
evening coming in at about 22:30 (aprox) Then Rich came back in at 23:07 Then
N3APZ showed up at 23:33. And last but not least Ramon showed up at 00:09.
Looks like the band fell apart about 00:09. South America still coming in.
Times are UTC

Yeah, they closed Reese a few years ago. That area is now some sort of industrial park or something. Last time I tried to look the place over, they wouldn't even let me in, and I was in an Air Force vehicle from Cannon...

> Have they done anything
>with that part of town that is west of the loop along 4th and 19th streets?

I'm not that familiar with the place, but next time I go I'll have a look at it.

>Next time you are there see if you can raise Cranston WA5TBB on a repeater
>and point him in my direction. He will know me by my old call of KD5YG.

If I'm not mistaken, that might be a repeater callsign or something, do you know if that's right? And I'll try to let them know I ran across you on the internet here.

Bill - I just pulled a list of all co-ordinated 6m repeaters in US and
Canada from new TravelPlus CD (ARRL Repeater handbook) - They list 833
6m repeaters total (including some crossband, remote base and simplex
repeaters). Only the one is Surrey, BC is on 53.53. 53.53 is listed
primarily as simplex packet freq in bandplan for area South-eastern
Rrepeater Association co-ordinates. Texas VHF-FM society list 53.53 as
"BeacoNet APRS" so at least one group officially recognizes it. -

I had LU2AVO-3 at 2026 EDT, and while I didn't get a position plot on Rick, WD4RBX, I did receive your "Hello" message at 2006 EDT.

And I kinda like your typo, Rick- BACONet. We're all Hams, after all...

I did as complete of a study of 53.53 MHz prior to landing on it for BEACONet operation. I also found the VE7 repeater there, and asked folks in the B.C., Canada area to take a listen for several days. No activity was heard on the frequency so, I generated a graphic that shows the usage of the frequency. It's over 100k, but a good gander if you have a chance. The direct URL is:
http://www.rochesterny.org/BEACONet/images/freqav1.jpg

PropNET/BEACONet is officially coordinated in NY, Florida, Texas and the Maryland/DC/Va area. There may be more...there isn't a "national communication structure" in place by which such things are tracked and communicated, to my knowledge. Packet operation (though not specifically BEACONet) is coordinated on 53.53 in the South East Repeater Association bandplan (http://www.sera.org).

This *is* interesting. I wonder if logging works for ^31 operation. It
would have been interesting to log, then playback with a shorter "icon
live time" to watch the band open and close to various areas. Thanks
for the report, Rich!

Just tried it a few minutes ago on N2VRJ's signal and played back the file.
Seems to work fine and doesn't get sent back out. I was curious if it would
transmit the log, so I only tried short files. Thankfully it didn't.

Karl, N3APZ

                                    ^^^^^^^^

Earl,
All BEACONet stations use HOPn-N. Change this to HOP6-6 (or similar)
and you will be recognized for digipeating on 53.53. Just fyi.
Ev

Rendered body type: text/plain

Absolutely amazing to be hearing any signal on 10 meters this morning at
this hour. It's just barley after 8am and I am hear W2EV and someone else
but did not get a good copy on them yet. I did turn down the gain a bit as
someone said I was overdriving a bit.

I have also done a bit of feed line changing. Appears the feed line I was
using on the vertical had a problem that I discovered on 6 meters. That
feed line has been moved over to the 40 meter antenna. As I have not heard
EV in a while, this may have been the problem.

This will run for the remainder of the day as I will head off to work around
2100Z.

Rendered body type: text/plain

Bill - also a note on repeater output/input. If area/region is using
the "standard" (whatever that means on 6m!) -1 MHz offset, the input
would fall 5 KHz from 52.525 - not a good thing! Half a meg split would
be different ball game. - Bruce, KD5IUG

I'll have to go digging for the notes. This map is a couple of years
old. You can count on AA2AC (a hub in Buffalo NY) and W2AAA (a hub in
Rochester) as full-time on 53.53. Expect a *lot* more next year. Word
is starting to spread of the BEACONet advantage for contest
rovering...and 53.53 is the ideal frequency for that.

Hi Cliff,
This one's easy. :o)

Open a "Stations" window (see the menu at the top). Once displayed,
you'll see a button at the bottom called "Snapshot". Press it. It will
create a text file of what appears in the window and place it in
UI-View's "snapshot" folder...with today's date as the filename.

Simply attach it to an eMail to this remailer. Cool, huh? :o)
Ev, W2EV

Rendered body type: text/plain

I see a lot of talk about 53.53, which I can assume will be AX.25 and FM.
Has there been any though to trying PSK on 6 meters, maybe between 50.4 and
50.8.

I am hoping to set up some beacon station at the University of Arizona using
PSK. One on 10 meters and possibly one on 6 meters if there is a consensus
on the frequency to use.

Does any one know if PSKServe will support 2 sound cards or 2 signal, one on
the left channel and one on the right channel?

I'm learning that it seems the Pacific Northwest does
things consistently inconsistent with the rest of the
world.   6 meter repeater splits here are -1.7 MHz. Weird eh?

Bill

Jeff - I am interested in PSK for BeacoNet on 6m also. Yes, the 53.53
freq is AX.25 FM. We all need to check regional plans for 6m PSK and
see what we come up with (won't be much I'm afraid)

Most of the regular PSK31activity I've heard is centered on 50.290.
Some of the HSCW guys are on 50.3 (as well as some FM occationally -
lots of discussing and cussing of that on the 6m list) Also WSJT metor
scattter around 50.270.

We have several currently on 6m AX.25. Would those folks like to check
the coordination group(s) in their area for current and/or future PSK
inclusion into bandplans?? I'll check SERA (Southeastern Repeater
Association the covers most of SE US and post findings for current use
and inquire about future plans. Agree that freq under 51.000 would be
best.

Bruce - KD5IUG

I've got a bunch of "bands" running down the waterfall again. They're
spaced 50-60 Hz apart. I have no what causes them but there'll be days I
have them constantly and then others where they never show up (like
yesterday). Whatever they are, they sure make it hard to pick out signals.
Maybe they'll go away soon.
If they start the "snake dance" it's going to be a lousy reception day (they
actually oscillate +/- 50-60 Hz sometimes too -- the snake dance effect).

Karl, N3APZ.

"I see a lot of talk about 53.53, which I can assume will be AX.25 and
FM.
Has there been any though to trying PSK on 6 meters, maybe between 50.4
and 50.8."

Good point 53.53 is for FM-based AX.25. We recently attempted AFSK
(SSB) AX.25 on 50.450 USB with no negative comments from anyone. Maybe
that's a good place for such activity? As for ^31...how about
entertaining 50.431 USB?

I agree that SSB & PSK31 activity should take place in the lower portion
of the band, primarily because that's where most people's antennas
resonate.

Of course, these are just suggestions.

"I'm learning that it seems the Pacific Northwest does
things consistently inconsistent with the rest of the
world.   6 meter repeater splits here are -1.7 MHz. Weird eh?"

No Bill, its a product of inconsistancy in coordination policy,
continent-wide. Some repeater splits are 1-MHz while other areas are
1.7-MHz, while still others are 500-kHz.

On the down side: this makes for interesting QRM between coordinated
operation (packet from the SouthEast on the same frequency as a voice
repeater in the NorthWest...each coordinated by their own entity).

On the up side: States that use 1.7 MHz splits have a *ton* of repeater
pairs...most of which are unused. If smart, they will simply not
coordinate the small sliver of space in which packet operation occurs in
other areas of the country. There's plenty of other RF to coordinate
to.

I'm not in range of my BEACONet^31 station...but it is very important to
know something: Can BEACONet^31 be used to pass traffic other than
beacon frames? For instance, can you send a message via BEACONet^31?

If the answer is "no" then BEACONet^31 is a propagation beacon
only...and may not be legal to run outside of the beacon subband on
6-meters. The beacon subband on 6-meters is in the CW only sub-band.
We could be in an interesting "catch-22".

On the other hand...if we *can* pass messages, then BEACONet^31
transmissions are allowed anywhere RTTY/Data is allowed, and we are ok
again.

Can someone verify that we can do more than send simple automated TX's?

In *theory*, with the right configuration, you would be able to send and
receive APRS messages. I have this enabled on 10m BEACONet^31, but I have
never successfully exchanged any APRS messages this way. You need to set up
auto-answer to APRS messages in UIView, and make sure that they are sent back
using the "I" port (letter "I", not number "1").

So yes, this should be possible.

It could be fun.... I would suggest something like this:

Most of us have a modem and ISP connection (or better even... (A)DSL to cable
or phone company) connected to their BEACONet/BEACONet^31 computers. We could
schedule to run the auto-email program once a day, and then email to a fixed
group email address. That way everybody gets all positions automatically, and
it's also easy to see who's been on the air for the last 24 hrs.

In a later phase, someone could write a small interface to automatically parse
the emails of the last 24 hours and project them on a map, which is published
on a web site. This would involve:
- email parsing
- parse locators to long/lat.
- project on a map with lines/arrows between links (is there a tools that lets
you automatically create layered graphics?)
- upload to map to website.

I downloaded the program and try to run it, but it was complaining that I was
missing MSMAPI32.OCX. Any suggestions/clues?

By the way, the website has some very interesting tools there that look worth
scooping out!

I run UI-VIEW at Home, and only have e-mail at work......SO

I have written an Ui-View to E-Mail interface:-

What does it do ?

Formulates a list of stations heard in the last xx hrs from the C:\Program
Files\Peak Systems\UI-View32\SNAPSHOT\ directory

And then e-mails the list of stations to an e-mail address

You must have a snapshot file being created, and this is determined by the

"schedule.txt" files

You can get the program here:-

www.users.bigpond.com/andrew.rich/index.htm

Ev - Its my reading of the rules there is nothing to keep a "packet"
station from sending a beacon - that is where the 'beacon every xx'
command in the AX.25 standard came from. Obviously, if there is normal
or frequent packet traffic in an area on that freq it should be kept to
minimum. If you hear a station, there is no reason you can't connect
and pass traffic. Probably 80-90+ % of APRS activity here is nothing
but location beacons - some firing off every minute or so (or less)
whether they are fixed or mobile and all of that is being feed into the
'system'. Question comes down to attended vs unattended.

Ev - One good person to bounce this off of is K4ABT, Buck Rogers.
Interestedly, several Pacific countries allow PSK in our cw only sub
band of 6m. Don't know if anyone or any group is exploring to request a
change in this. Any ARRL officals on list?

I downloaded the 'sniffer program' and it runs on my machine. Roman I have
sent you the missing file directly to your email address, But it comes up
with a VB runtime error for file not found. I looked at the scheduling file
and it appears to be looking for the Snapshot every minute. Not sure if it
suppose to actually activate the snapshot within UI-VIEW or it wants a file
names SNAPSHOT. I tried to rename my snapshot file to SNAPSHOT, but no
dice., From looking at the web site, I believe this program is designed to
filter out the VK station, so this may not be very useful for our purposes.

As I do a bit of programming on the side, I will attempt to write a routine
that will parse the snapshot file into useful information. That's the
difficult part. Email to a group will be a piece of cake.

Recommendation and ideas are welcome. Is the are way to get UI-VIEW to
automatically do a snapshot automatically? UI-PATH might be a better way to
implement this, but As I was have having some difficulty with this program
and my TCP stack, I trash it. As I have given up on the AGW packet engine,
I might reinstall UI-PATH and see If something can be done with this.

Are the some developer doc's out there concerning UI-VIEW and UI-PATH?

Bruce

Ev has a good idea of 50.431. I checked my trusty, truthful and totally accurate (sic) ARRL repeater directory and according to the band plan published there. 50.3 to 50.6 are reserved for all modes with 50.4 as the AM calling freq. and 50.62 as the digital (packet) calling freq. This would be a good start.

I will check with coordinators out in this neck of the woods and get a reading on our intentions.

I have found the secret to using this program. Download the Secluding.txt
file on the web site and drop it into the root directory for UI-VIEW. This
will create a scheduling file that updates the snapshot every minute. Then
run the aprs.exe program and enter in the required data such as your email
address and the password to access your MAPI email client and email address
your want the list sent to.

Every minute this program will parse the snapshot file and filter out the VK
station and send out the list. I verified this only works for VK stations
by editing a few lines in the snap shot to reference a bogus VK station.
Only one problem, The text file attached to the email has nothing in it even
though the list generated by the program does show the bogus VK stations I
created.

Therefore this program is not very useful unless we can dump the filter.

I hear nothing except for the normal receiver "rush." I thought it might be
monitor settings, but changing resolution has no effect. It went away for a
few minutes then came back. Even tuning across the band and listening for
pitch changes reveals nothing.

Right now (1pm) none of that stuff is visible.

Odd...

Partial catch...just like my partial powerball hit last night. One number
on all 4 tix.

I copied full frames from Ramon a couple weeks ago and figured that had to
be some kind of backscatter too. Haven't heard him since.

Now *this* is interesting. Yes...it looks like this is a piece of one
of my frames. Fascinating indeed...backscatter? meteor? tough to
know, but my money is on this being a bona fide partial catch.

Ev, W2EV

> suppose to actually activate the snapshot within UI-VIEW or it wants a file
> names SNAPSHOT.

The scheduler file is supposed to work in conjunction with the UI View
Scheduler, I think. It goes in the UIView directory, and you should be able to
see the schedule with File -> Schedule Editor. It should take a snapshot every
minute and put it into your Snapshot Directory. It appends these snapshots all
to the same file, and the file name has the format yyyymmdd.txt
(year-month-day).

I think we can parse some stuff from this file (shouldn't be too difficult in
VB, VC, or PERL). It would probably be good enough to have the following
data:

- your callsign and POSIT (from some predefined setup settings)
- each time a station is heard (you can detect that by seeing either a new
callsign show up, or a new timestamp with an already heard callsign), an entry
with the same data as in the snapshot log

> I tried to rename my snapshot file to SNAPSHOT, but no

Talk to Roger Barker (the author) or see the yahoogroups file area for uiview.
There is a lot of information there.

That's what I was wondering a couple weeks ago when I questioned our use of
^31 on 28.130...

Yesterday I actually did send a couple of messages to Jesse and he did
receive them. The only problem I had was my system kept transmitting the
message fragments because it didn't get an ACK back. If you kill the
message line after it's sent the first time, there isn't any problem with
repeats.

Since then I've set my frack time to 99 seconds (may be able to set it
higher if I manually edit the .ini file) but haven't tried sending any
messages with it. I just got back from a hamfest and have N7YG pounding in
here so I'll give it a try and let y'all know in a couple minutes.

Ok, setting FRACK to something longer than the time it takes for your
BEACONet string to send will stop the immediate repeats. If no ACK is
received, then the system will retransmit the fragment (like it should) in
one of your following transmissions.

I did successfully get ACK's back from Jesse yesterday, but since I didn't
tell him I set the port to 'I' when sending it, he wasn't able to reply
himself.

I did notice that if you set the port to I, you have to do so AFTER you
enter the message you want to send. Otherwise it jumps back to port ONE.
Once you manage to send through port I, you don't have to reset it again.

Go figure

My latest status for 10 mts BEACONet^31:

2001-August-26 13:27 3 stations

Callsign	Type	Latitude	Longitude	Miles	Bearing	Last Heard
+KU5W*	Grid Squ.	[EM54UV]		1058.8	247	Aug 26 11:23
WD4RBX*	Grid Squ.	[EM84NM]		834.0	233	Aug 26 11:05
N2VRJ*	Grid Squ.	[EL86TX]		1235.3	215	Aug 24 13:44

All times EDT. I did hear LU7FU call CQ on our frequency on regular intervals
this morning.

YEEHAAAAA!!!

Just sent a frame (several tries) to N7YG and just got the ACK back. Only took 10 minutes or so, but yes, we can pass messages over ^31.

In the message box, make sure port 1 is set to port I. You can do this for the QUERY (returns status text) as well. Under Setup: Miscellaneous, set frack to 99 or so.

That should do it guys.

Karl, N3APZ

Rendered body type: text/plain

Ev, Jeff and group - here is snip of the Southeastern Repeater
Association 6m plan from .1 up minus calling freqs.

```
50.100 - 50.600         SSB & AM (500 KHz)
50.400                      AM Calling Frequency
50.600 - 51.000         Experimental/Special Modes (400 KHz)
50.700 -                    TTY Calling Frequency
50.800 - 50.980         Remote Control Model Radio (180 KHz)
51.100 - 52.000         FM Repeaters & Simplex, Voice & Packet/Digital
52.000 - 54.000         FM Repeaters & Simplex Voice & Packet/Digital

PACKET/DIGITAL FM SIMPLEX FREQUENCIES
53.490  53.510  53.530  53.550   53.570  53.590
-------------------------------------------------------------------------------------------

>From Texas VHF-FM coordination site
50.100 - 50.300 Weak Signal SSB (50.125, 50.200 Calling Freqs.)
50.300 - 50.600 Mixed Modes (50.400 AM Calling Freq.)
50.600 - 50.780 Packet and other data modes
50.800 - 51.000 Model Radio Control Channels - 20 KHz steps - (DO NOT
OPERATE HERE)

No luck on Louisana (know fellow to check with), Arkansas (ditto).
Alabama's site doesn't list a plan and Flordia's site is down, gone or
moved.  Will continue search   - Bruce, KD5IUG

Rich

Got everything from you. You had a really booming signal there. I think the band is in really god shape. BTW I am using a vertical antenna now that I have to coax feeder problem cured.

Will be out of the shack. Burning the steaks on the grill, then Hi Ho, Hi HO, it off to work I go!! I will leave this running for the next 24 hours and see what happens. I have UI-PATH up and running recording everything hour by hour.

73

Jeff

In your UI-View folder, edit (using notepad) the file called
UI-View.ini.
Scroll to the end of the data file and add the following statements
exactly as they appear below:

```
      [DIGI_OPTIONS]
      UIFLOOD=
      UITRACE=HOP

Setup|Digipeater Setup
           Enable Digi = x
           Alias Substitution = x
           HOPn-n = x        NOTE: leave WIDEn-N unchecked for now
           Alias(es) = your callsign
           Sub Alias = your callsign
           Dupe Secs = 60
           <OK>
```

Ev, W2EV

ps...full instructions for setup of a "Level-II" BEACONet station are

         Uh -- that section's already in UIView32.ini -- so just add/edit?

         And -- seems like this will make a mess of cross-band digipeating.

Now we are getting somewhere Ev. When we can pass very short
messages and have an automatic reply that is placed in memory
waiting for a valid interrogation, we are doing the job.
This,
of course needs to be in a FREE program than any idiot like me
can install without a degree in computer engineering. Of
course that immediately excludes UI-VIEW in any fashion! When
we get a decent program to do this, I'll be glad to join the
fun, but for now Satellite and microwave work far exceeds any
computer wet dream I've seen so far. 73 Cliff K7RR

Hi Karl.
Do you have an audio isolation box like a Rig Blaster between your computer and the radio? That picket fence of lines running down the waterfall sounds like ground loop hum to me. I played with PSK31 and MFSK16 on a HF radio recently without isolated audio. I had hum bars all the way across the waterfall. The real clincher was that the bars became more solid and substantial when I turned the radio OFF. The bars tended to go away if signals were louder. If I remember right, one of your follow-up messages said you didn't hear anything on the radio, just saw bars on the computer. I'd take that as another indication of ground loop hum with the computer.

There are many companies selling PSK31 audio isolation boxes and there is plenty of good info on K4ABT's web sites too. www.packetradio.org
My favorite was a Hints & Kinks article in QST Feb 2001, plus revisions in a following issue. (The revisions removed all ground symbols and turned one pot around.) And another H&K article (QST June 2001) about using a computer DB9 switchbox to switch audio between radios was excellent. The real key to remember is that you want NO common grounds anywhere in the isolation circuit. There will be common ground at the radio and at the computer, but every circuit in your isolation box should be isolated from every other circuit in the box. Common grounds don't come together until they hit the connectors at the radio and the computer. And of course the radio grounds are isolated from the computer grounds by the isolation box.

As for transformers, I suggest using any 1:1 style transformer you can find, 600:600 telco transformers are excellent. You DON'T need to worry much about impedance matching since you have more than enough signal available that you can throw away a bunch in pots and mis-match. If you have to use speaker audio to drive the receive side, put a load resistor on it and turn up the volume a bit. Many audio amps are noisy when operated at minimum volume. So turn up the volume a bit and attenuate it with a pot before it hits the sound card.

For PTT keying, I prefer to use LH1056 or PVT412 solid state relays instead of a simple opto-isolator but you use what you have or can find. Just be sure that whatever you use will fully switch the PTT circuit with 5ma or less from the serial port. (5ma is an arbitrary number but trying to get too much current may damage the serial port or simply make the opto-coupler not work.) Nothing says you can't use a relay if that is what you have....

And if you don't have time to build an isolation box, you can buy one from assorted vendors for about $30 to $80, depending how fancy you want it.

Good luck and I hope this helped.

73, Doug Reed, N0NAS.

I beg to differ. Any program with decent functionality *will* involve a
learning curve, and I am pretty sure that UIView is not the hardest program to
learn. Personally, I think it's a lot more straightforward than WinAPRS, but
to everyone his own...

APRS and Beaconet^31 *is* a complicated mode, with a lot of options which we
can include or leave out. And it is well supported: after having some problems
with one of the features, I had a very helpful exchange of emails with the
author that solved the problem.

Again Cliff, if you need any help setting up you BEACONet or BEACONet^31
station, we are here to help you. Give a shout, and there are many that
answer.

If desired, I can set up another conference bridge lateron this week where we
can share experiences, give setup help, etc. Please let me know if you are
interested, and I will set something up.

Somewhat off-topic, but I thought we might be able to provide assistance
in this matter. The Coast Guard in San Francisco has been mistaking
meteors for emergency signal flares and has been expending considerable
resources in responding to these false alarms. Basically, they just want a
few pointers to meteor activity prediction resources...

Unfortunately, they didn't provide an email address, so if you don't feel
like calling long-distance, just email me the info and I'll call 'em
(local for me, somewhat).

Thanks all,
-Robert

Thanks for the info Doug.

I use something similar to a rig-blaster. I pulled it off one of the
sites and made it myself. The bands come and go however. With the rig
off but still connected, I get nothing on the display. What I really
find odd is that they'll disappear even with no signals on the band.
But since I'm moving everything around in the apartment, I'll take the
time and recheck everything.

It can't hurt, right?

Rendered body type: text/plain

Ok guys, just wanted to let everyone know that I'll be generally
off-air except for weekends. I normally don't like to leave the radio
going when I'm at work in case something goes wrong, but with classes
starting again, I won't even be around during the day now.

So, maybe I'll catch y'all on the weekend.

Today sure was a blast though! I'm glad I caught it.

The other day we were batting around the idea of logging UI-View. I've
been messing with that, and it's really neat to see when the stations
pop up and follow the propagation. I tried changing the refresh limits
in UI to allow stations to drop off when the log no longer shows them
as being received, but haven't been able to get that to work. If
anyone figures it out (I'm probably missing something REALLY stupid),
let me know.

Also, if anyone figures out how to log psksrv, let me know about that
too! The buffer only holds so much and without logging, you don't have
any hope of browsing back to search for partials. That might be a good
way to start plotting backscatter events, large reflective ufo's, etc.

Karl, N3APZ

"Robert J. Chen" wrote:
. . .
> Basically, they just want a few pointers to meteor activity
> prediction resources...

Hi Robert,
This one's easy...but as their note mentioned, it is better for someone there to become well acquainted with the whole "meteor thing", then explore what resources are available before making a judgement as to how applicable a particular tracking resource is to SAR work.

That having been said (AND expressly stating that I am not an SAR expert), there is a system that comes to mind that holds significant promise in helping to filter-down the number of false alarms they would respond to. From a health-and-safety perspective, there's no way to assure all meteor-falses can be eliminated. Some of the big rocks will burn very brightly and slowly...mimicking a flare.

Here are my (non professional) thoughts on the topic:

BEACONet Meteor mode was born from the work of a group of amateur "radio-meteor" hunters "out west" that would tune their commercial FM radio receivers to an unused (in their area) channel. When a meteor would burn through the sky, a distant station on that channel would burst through, then fade away. All night long, meteor hunters would stay awake, looking for meteors and use their radios as audible indicators that one just fell.

After several attempts, they got to be pretty good at correlating visual and radio reports. The advantages of this system for SAR are:

o Commercial FM transmitters (and even TV!) are *very* high power
o They operate 24/7 providing an excellent signal source
o Even in major metro areas, there is often a channel or two
  that is vacant to the local listener, but that has several
  transmitting stations within a 500-km range to use as meteor
  signal sources

It is even possible to keep a printed record of such occurances! This would be important, should documentation need to be kept as to why SAR operations were not invoked. The visual observer could note the exact time of their visual "catch", compare it against an automated record of what was received from their own location (using the system described above but connected to a strup-chart recorder) and present it to a trained officer (decision maker) to determine of SAR should commence or other tests should be applied.

OK...enough on the background. I am not an expert on the system that I describe, only a messenger. Here is a link to the automated system just discussed: http://www.spaceweather.com/glossary/nasameteorradar.html

On an aside...for BEACONet purposes, the "downside" of this system is that it's difficult to know which DX station is being propagated. There is no embedded lat/lon indicator in commercial broadcasts. So...whereas the source of RF is more consistant (24/7 boadcasts) the location of the RF (which DX station is now being propagated?) is unknown.
However...for simple correlation to a visual meteor event, I can't think of any system that could be better.

Regards,
Ev Tupis, W2EV

Rendered body type: text/plain

For those (like me) who do not get solid PSK31 signals
"on air" there is always the question as to whether your
hardware and software are properly set up to decode
PSK31 signals when propagation conditions do smile.

I purchased the PSK31 Audio Beacon Kit that was
described in the August 2001 QST (page 28) and
was pleased to find that it gave me the "signal
generator" I needed to confirm my PSK31 setup.

For those who may not have the article handy, the
kit may be purchased via the site
http://www.njqrp.org/psk31beacon/.

Hi, Ev,

In response:

#1. I put it together in a couple of hours. I am
a very cautious kit builder and check everything
twice before I solder (and then check every
solder connection with a magifying glass) so
others could probably put the kit together in
about an hour.

#2. I am not sure I fully understand the IMD
question.   The device has the option of either
running continuously or running under control
of an "output by output" trigger.

#3. What it did for me was to confirm that
my setup (software and hardware) was
correct and also to give me some experience with
PSK tuning with the result that I am now capturing
the off the air signals that previously I was
too impatient to look for given my very
marginal HF location/antenna.

Thanks for the update, Ed. I understand that the Atlanticon PSK31 kit
comes "preprogrammed" as well. Do they include instructions for burning
one's own ROM, should that be desired?

I've always believed that it would be advantageous to include several
seconds of "idle" in our transmissions, in order to get a good IMD
reading (that is a "quality of data" measurement in the PSK31 world).
I'm glad to hear the Atlanticon kit includes that.

Ev

Excellent! I'm glad to hear you've got isolation, now we just have to

figure out where the garbage is coming from. Since you don't hear it on the speaker, it still seems most likely to be a ground loop problem. Or it could be hum induced into the transformers because they are too near your monitor or a power supply, anything that produces a magnetic field..... But that wouldn't explain why they go away when the radio is off.

Can all the equipment be plugged into a single AC power strip? That would provide a common ground for everything and remove one more variable. Since you say it varies with nothing changing at your end, I kind of wonder about the antenna and whether anything could be causing a ground potential difference from the antenna to the radio.... Doesn't seem likely.... Could be something inducing a common mode signal on the coax ground I suppose... Do the hum bars go away if the antenna is disconnected??? If they don't, you've proved the problem is all right there on the table with the computer and the radio.....

I still want to harp on separating all the ground circuits on the isolation box. Especially the PTT, audio AUX-IN and LINE-OUT connections to the computer. In my opinion, when you disconnect the cables and ohm between each of the cables going to the isolation box, they should all be open circuits. I recommend that AUX-IN and LINE-OUT ground should be separate because you are mixing high and low level signals making ground noise problems more likely. If you had to use the SPEAKER-OUT, problems are even more likely. Similarly, the PTT grounds should be separate from the audio grounds because they are digital vs. analog circuits in the computer and ground noise is likely.

Of course, if those grounds are causing the problem, it doesn't explain why the hum bars come and go.... I hope the solution is as interesting as the problem... <g>

Try checking your monitor. I have the same problem, and I started to become suspicious when the bars increased/decreased depending what I am showing on the screen.

My solution for now is to switch the monitor off whenever I am not using it, but you should check your transmission lines/tuner/etc for RF leaks. Couldn't hurt...

311. [propnet] N2APB PSK31 Audio Beacon Kit

From: esack <esack@pacbell.net>
Date: Tue, 28 Aug 2001 08:28:36 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>

In response, Ev,

According to the developer, while there
is an RS-232C connector on the board
in the kit, the software to enter custom
messages from the computer is being
reworked and should be ready in
30 to 45 days. At that time, they advise that
they will send a new MCU chip to the purchasers
of record, free of charge.

By the way, the manual that comes with the unit
is quite informative.

73,

Ed

I have also noticed these hum bars from time to time. I can eliminate them
by changing antennas from the vertical to a horizontal. I thought it might
be computer or monitor hash, but shutting down the monitors did not help. I
put the dummy load on to see if it was something local, but nothing. It is
a signal from somewhere outside the shack that is vertically polarized.

The email client works fine.

Funny, but the only thing I've seen on the reflector this week have
been
"tests." Guess the band really is dead. Had rain here this afternoon,
so I couldn't hear a thing. Fired up the transverter for 6 (just to
listen) and only caught one cw beacon.

I'll be on 10m tomorrow through Tuesday morning.

In the meantime, can we get UI-View to plot email paths?

Karl, N3APZ

Thanks Karl

I too have not seen much come across the reflector in a few days. Thought I did something to my kornfuzer. Have not had a signal up in a few days due to WX. Gonna try some SSB this weekend and see if I can dig out a few new 10-10 numbers.

73

Hi, All,

Ev suggested that I share this catch
of the AM (local time) Aug. 30th with
the group. My station is located in
Coronado, California (off of San Diego)
which would make this a pretty good
"coast to coast."

73,

Ed

4. [propnet] A plea for the Configuration Code

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Sat, 01 Sep 2001 11:52:08 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-33695-2001.09.01-11.17.33--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I've seen a lot of transmissions that omit the configuration code
lately. Doing so really limits much of the useful data that we could
otherwise have in analyzing the openings that we are experiencing.

Please format your frame in to the BEACONet standard:

HTTP://GO.TO/BEACONET
CALL>BSNPAH:[GR##ID] call>bsnpah:[gr##id] email@host.com

This provides two chances at a full-decode per transmission and
identifies where to go for more information and and (optionally, by the
way) an eMail address to QSL by.

Additionally, a useful configuration code helps us to analyze if we're
hearing 25-watt stations or only 100-watt stations (a good band-quality
indicator). Lastly, it won't be long before we start bridging activity
from one band to another. Without a configuration code, we lose the
band-of-origination information.

Please...it takes only a moment to calculate it. There's even a
java-based calculator right on the web-site to make it easy!

Ev, W2EV

Have been off the air since last weekend due to sporadic thunderstorms.
Hope to keep things running for the rest of the weekend. So far have only
plotted N2VRJ (1 hit during 1500Z and 1600Z hours - steady during 1700Z)
today. Was able to send two messages to N2VRJ and got ACK back after first
attempt each time. Must be "pipeline" between Florida and Arkansas!! Hope
to see some more stations soon.

Bob - KC5DUI - EM26WE

Does anyone in either group have experience with
setting WinPSK (or some equivalent program) up
with the TenTec Scout 555?   I am using the Rascal
R-TT4P interface.

In the receive mode all works very well. We see
strong East Coast and upper Northwest QSO's

coming on to the screen routinely on 14.070mh.

In the transmit mode, I have the transmitter
microphone control, and the sound card
master gain and line out controls set
at about 20 to 25% each.

The computer is a Dell Inspiron and, as said,
I am using the WinPSK v2.09 software (I also
have v2.10 but it seems to work about the same.)

The unit keys up O.K. and I can hear the warble
on a second receiver but it does not appear to be
very clean (but, of course, given the close distance
between the transmitter and the second receiver
we may just be seeing an overload situation.)

I have also not been able to decode the messages
sent by the transmitter on a computer connected
to the second receiver.

Anyone have experience with this or an
equivalent setup? Suggestions, please.

Ed

I've got KC5DUI & N2VRJ here in NY. I even got a message from 'DUI!
Interestingly, with an embedded config code in his frame, I could
discern that (last night) his E-level power (16-32 watts) faded from my
screen (to a more sporadic level of reception) about three hours before
my G-level power (64-125 watts) faded from his screen. Fascinating! :o)

Ev, W2EV

Embed those config codes! :o) Your frame should look like this
(obviously, with your own personal information where appropriate):

HTTP://GO.TO/BEACONET
W2EV>HY0E03:[fn03xd] w2ev>hy0e03:[fn03xd]

Hi All. With the newest flare, ten meters has really opened up. On
28.120, I've had fifteen QSO's all over the world---great stuff!! Here is
the heard list for Propnet on 28131.0 from CM95, 1600Z, Central Calif:

PA3EUG   1462 Hertz tone
N3APZ   1350
W2EV   1471
Weak Signal   1469
LU3OJZ   1561 in QSO with a number of stations as well!

Ev, it required a bit of thinking to understand you dual identification:
W2EV>HY0E03:[fn0xd]w2ev>hy0g03:[fn03xd]
but I think the dual power idea is a good one. You may need to reduce the
level of the higher power as there are six spectral lines being presented.

Ramon, I'm getting four spectral lines from you but not to worry, not bad
enough to matter. Your IMD value is -18db.
Nothing heard from KC5DUI or N2VRJ as yet.   73 Cliff K7RR

Thanks for the frequency report, Cliff. I don't know why I'm so low, but
I'm thinking it's the sound card. I don't think it's the rig because I can
zero beat WWV/WWVH anywhere they show up and the display is right on.

Anyone know of a way to force a sound card into a diagnostic mode so I can
measure the output?

I bumped up the output power to a whopping 20W now. Maybe it'll help
everyone hear me better.

Karl, N3APZ

Hi Karl. You bring up a good point. I think all of us have far more
instability in the sound card than we do in the transceiver! Listening to
WWV/WWVH is an excellent way to determine what is going on. It would be
very useful to understand the sound card but that would more difficult
than the existing programs we do not understand!   Here the 1900Z report:
new stations

N7YG   1430 hertz
LU3OJZ   1362   was on 1561 in QSO
WD4RBX   1464   sending ACK 02 so someone pinged him!
??????   1588   There is a station here that is trying hard to join
                us on PSK31, but the transmitter drifts upward in
                frequency about ten hertz in one second, all during the
                information packet!! I would suspect a power supply
                problem. This is easily heard when listening to audio in
                a speaker or headphones.

Additional note: Europe is pounding in on PSK31 on 28.120. If Africa
would show up on that frequency, I would have worked WAC in one day. The
VK and ZL stations are just now showing up.   73 Cliff   K7RR

Hi all

A while back I was wondering the same thing. I ran a test limited to
available equipment. I tested 2 completely different computers & sound cards
hooked to one radio. This was a receive test only. What I found was that
during receive both computers showed the same audio frequency.

WD4RBX   1464   sending ACK 02 so someone pinged him!

I sent 2 messages to Ruli LU3OJZ he was booming in here and the only beacon
heard so far today 20:00 UTC.

10 did seem to be hopping earlier. I copied a few other Argentinians and
heard some other signals, but the vertical is really on the wrong side of
the building for that.

I did a little more messing around with WWV. When I go to 20MHz (I disabled
the wideband transmit on the 735 after I left Navy MARS), I can use psksrv
and digipan without worrying whether I'll accidently key up. Looking at the
WWV signal, I can copy the individual tones and check the displayed
frequency against the NIST specs. In AM, they're right where they belong.
When I switch to USB, no dial offset (zero beat), the displayed tones are
within 3Hz of the AM setting. All in all, I don't think that's so far out
to cause problems and the AFC in digipan and psksrv will easily compensate
for that much change (on the received signal).

Using that as a guideline, I'm fairly confident in saying that us
beaconetters (baconetters) are all over the place! How about a nice, simple
frequency we can dialset to for people who have rigs that only resolve to
100Hz (like me)? PSKsrv would lock on a lot faster if we were a little
closer in frequency.

Another, somewhat unrelated thought:

I was looking through the meteorscatter info and found a great idea there.
Since we're starting to get stations all over the country involved, why not
establish transmit times based on the call area the station is in? It might
be useful in determing where the band is beginning to open, especially if
you can't pick out the entire signal. Or, if that's not feasible, how about
setting frequency ranges based on call areas? With 10 CONUS areas, each
having 5 -10 Hz range (leaving a few HZ for a guard band), we could easily
fit each area into a 150 HZ range (+/- 75 from the center frequency). Of
course that would depend on everyone getting on frequency.

Karl, N3APZ

Rendered body type: text/plain

I wonder if anyone can give me a hand here.

I am using the following setup:

    TRANSCEIVER: SCOUT 555
       (with Power Output level at about 10 watts)

    SOFTWARE: PSK31srv (attached to UI-View32)

    INTERFACE: Rascal R-TT4P

    COMPUTERS: Relatively recent running
        Windows 98 (Intel Seattle Sound Card
           on one of them)

PROBLEM:

Receiving PSK31 signals works fine

Transmitting with the N2APB Audio Beacon
  Kit Source works fine (can see a clean
  signal and decode 100% on a second
  transceiver/computer setup)

Trying to transmit with the PSK31srv transmit
commands (no matter what the audio card
line out settings) results in "no warble" when
I key in text and, in consequence, no decode
in the second transceive/computer setup used
to check the settings.   In other words, when
I "push button" from "receive" to "transmit", the
transceiver PTT works and there is R.F. output
but the modulation is a single audio frequency
rather than a warble when I enter text from the
Keyboard (said text does show on the screen).

Anyone have any ideas where I am going wrong?

73,

Ed

Sounds strange... I'm not familiar with the kit or your rig. Does psk31srv
send the cwid or just a carrier? Have you checked the transmit audio cable?
Maybe the kit uses a different wiring config?

> 5 -10 Hz range (leaving a few HZ for a guard band), we
> could easily fit each area into a 150 HZ range (+/- 75 from
> the center frequency).

Actually, this is a version of something that was proposed
earlier...once we have established world-wide BEACONet^31 activity.
Here's the scoop, as succinctly as I can remember it:

If one agrees that...
o there is a 3-kHz "passband" within which a PSK31 signal
  may reside, once a transceiver is tuned
o the 3-kHz could be divided into segments which would be
  assigned to each "major area" of the globe
o counting Europe, Africa, Asia, North America, South America,
  Australia/Oceana...there are 6 continents to serve
o there should be an "unassigned" band of frequencies for general
  experimentation

So...
  100-hz to 500-hz = Africa
  501-hz to 900-hz = Asia
  901-hz to 1300-hz = Europe
  1301-hz to 1700-hz = North America (since we're in this already)
  1701-hz to 2100-hz = South America
  2101-hz to 2500-hz = Australia/Oceana
  2501-hz to 2900-hz = Unassigned, Experimental

Given that each of us on 28.131USB think that we are +1500, but are
actually in a segment that could be as spread-out as far as 150-hz...I'd
think that a 400-hz "band" assigned to each area would be quite
effective in segmenting our operation...allowing a simple waterfall
display to be used to effectively see to which area of the world the
band is open at any given time.

Then comes the tougher part...what should the scan rate be set to in
order to scan the entire 2.8-khz segment for signals?!? :o)

Food for thought,
Ev, W2EV

Fascinating! I'd have thought that we were waaaayyyy too close to have
any possibility of ever hearing each other via any ionospheric mode.
The MUF must be reaching for the stars! Interestingly, Europe is
reporting Aurora at this hour. There may be some relationship...

I *love* this stuff! :o)

That's an even better plan :)

I've tried different scan widths and times but have yet to get the system to
lock onto our small group consistently. I can't imagine trying to scan
2.8khz!

An aurora? Cool! Y'all will know where I'm at tonight. I've never seen
one!

In case anyone starts to wonder if I'm mobile or if I messed up my grid, the
answer is no. The gps decided to relocate me today. I probably never let
the unit sit still long enough to get a good resolution on this new
apartment. Anyway, I think I'm now in FN00DK instead of CK.

At least the first 4 stayed the same...

Hi Ed,
If I understand correctly, the system is receiving OK (everything plots
fine, etc.). Even when you go to TX, the T/R system works as one would
expect and you even get audio going to the transceiver.

The difficulty that you are having is that the audio is not
warbling...but is only one tone (rather than the expected two).

Since PSK31srv simply tells the soundcard to generate the tones, there
is only a couple of places one would go to look for problems as you
describe:

o possibly a bad load of PSK31srv
o problems with the soundcard/driver (most likely problem)

To be absolutly certain, would you mind trying the following tests, and
reporting back what happens?
o Setup PSK31srv to CW-ID and see if it does
o Use DIGIPAN (without PSK31srv active) and see if it is able
  to send two-tone warbles
  - if DIGIPAN works, try a complete uninstall of PSK31srv and
    reinstall

As well, assure that you are using the most up-to-date driver for your
sound card. Believe it or not...this is the single most likely solution
to almost every similar problem I've run across in the use of PSK31srv.

It's great to have you this close! :o)

Hi Cliff,
Very cool! I'll reduce the mic gain a bit. Thanks for the tip.

Interestingly, Europe is under Aurora as I write this. I wonder how
closely related that is to our sudden 10-meter catches.

Ev, W2EV

32. [propnet] PSK31srv Transmit Setup Question by W3NRG

From: esack <esack@pacbell.net>
Date: Sun, 02 Sep 2001 15:33:18 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-33896-2001.09.02-17.53.47--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi, All,

I was able to get the system working by
using an audio amplifier and speaker to
get the transmit versus detection frequencies
sorted out.

Transmit is working now from the output of
the sound card.

Sorry to have raised the flag and appreciate
any attention given to my problem.

73,

Ed

Rendered body type: text/plain

Hi, Ev,

As said in companion mailbox, got the system
properly setup using an audio amplifier and
a speaker. I was being too "careful" with the
levels I was sending to the Rascal.   Had to
crank the drive into it up and do some
frequency adjustment and now I am
"on the air."

Thanks for all of the helpful suggestions.

I will copy and save for future reference
in case I fall into a hole again.

Always appreciate your feedback
very much.

73

Rendered body type: text/plain

Is anyone on 50.400? Have we decided to use that for a 6m ^31 freq or is that still up in the air?

I'm going to hop on 6m and give a listen. The transverter is tuned for the low end of 6 but can hear up
 to 53.53. At least is hears my ht on low power.

Best I can do on 6 is 5-8w...

Karl, N3APZ

Hi Karl,
The frequencies that we bantered about were:
50.450 USB for AX.25
50.431 USB for ^31

I honestly know of now continuous activity on these feqquencies,
though...but I'm willing to QSY for a few days and see what we get!
Anyone else game? Karl and I are a bit close to hear eachother
otherwise.

I'm there, more or less... The transverter is tuned and I'm ready, I think.
Going to pop out to the ICOM web site to see if I can get the HT unlocked
for 54-76 receive.

         I'll move to 50.431. I suppose we use the USB mode there, with a
dial frequency of 50.431, right?

         QSY...

Yes. Dial frequency of 50.431 USB. Audio +1500. This should be
interesting for a few days. :o) See 'ya there.

Hi Karl

Check the Meteor scatter record on BEACOnet for 6 Meters and you will find
that I was heard even though all I was running was 14 watts and a J-Pole.

The neat thing about BEACOnet is that we are experimenters. If you have 100
Mw or 1 kW let it rock.

As far as 6 meters PSK goes I would love to give it a shot. My rig is junk
and it will TX any where from less than a watt to 14 watts depending how it
feels at the moment. The only thing is I believe that the E season is over
for me. All the reports (promptnet) indicate that.

Using my antenna, my 6-8w is probably closer to 100mW.

Anyway, I just thought about giving 6 a try due to a report I received earlier of TV channel 11 from
Wisconsin making it into Ohio. That's somewhere in the neighborhood of 210 MHz if I recall correctly.
Then, if Europe was getting aurora, I figured we might benefit from it if the activity remains high
enough.

Ok, I know I probably have a better chance of 6m moonbounce than hearing PSK anything from an aurora but
 like you said, we're experimenters.

I just hope I'm not wiping any out my neighbors tv's.

Thanks for the response, Karl. The simple
answer is that I was being too cautious (given
all of the cautions about overdriving the transceiver
in the literature) in my sound card output
settings.

I may not be completely out of the woods but
I can now decode the transmissions of my first
station on a second station set up some distance
away so I may be getting close to trying for some
"on air" contacts.

Thanks for the come back.

Ed

Rendered body type: text/plain

Didn't hear a peep last night. I couldn't even copy the 6m cw beacon in Pittsburgh! This morning started out the same way, and I knew something had to be wrong. After taking the tuner out of the line I was able to hear the cw beacon. Having only one antenna is a real pain and forces me to use a tuner. Reinserting the tuner and trying alternate settings allowed me to hear the beacon.

Apparently I had a real nice dummy load last night.

I'm now seeing the normal atmospherics, can hear the beacon, and am psking my little transverters heart out.

Live and learn. Then get a better antenna...

Hi all,

Things are QUIET so far this morning. Had 17 hits on PA3EUG during the 1200Z hour and nothing else showing for 3 Sep. Looks like the band opened and closed. Will keep the system running throughout the day.

Bob - KC5DUI - EM26WE

Hi all,
I've been up and listening on 10 meters for a week now. I went out and purchased a RS HTX10 rig last week to join in as a "lurker". The Radio Shack I visited was supprized to see that this radio was not in the new catalog, He did assure me it is still available via their in store computer listing. They directed me to the correct store in my area that had stock.
Anyway, as soon as I got it hooked up and checked out the software, I began receiving several signals form the east coast, (I am in Cupertino CA.,CM87). I did not save the screen shoots, as I thought I would be getting more of these, but it has been quite since last week with only one station popping up regularly, N2VRJ hits me often. I'll save the next good screen shots and list.
This is fun!
73,
Wayne, KE6AJE

Glad to have you join us, Wayne. When you're ready to go active, you can either use a tnc and join the ax.25 crowd or get/build a psk interface. Building the interface is very easy and costs less than buying one. Of course, buying a pre-built one save you the trouble of figuring out why your transceiver blows fuses (I built my own and got the pin connections backwards, shorting out the 12v).

Either way, we'll be looking for ya!

Karl, N3APZ

Welcome back, Jesse. As of this moment, there appears to be a pipeline
from NY to AZ. Jeff's signal is S7 and clear.

Printing you just fine today Jesse. Unfortunately I did not get my new
ten meter antenna up until 2200 UTC, but at that time you were S3 here
in Central California. Cliff K7RR

Hi, Ev,

You will be happy to know that W3NRG is now
working as a 10 meter BEACONet station on
28.131mh using the setup instructions from the
BEACONet web site.   I am limiting the output
to 10 watts at the moment.

Locator is DM12JQ

Config. Code is HY0DB3

Will be pleased to be advised if anyone hears me.

I find that I copy W8 land on 28.120 mh very
frequently so maybe the reverse path will smile.

73,

Ed

W3NRG

Rendered body type: text/plain

Hi all. This is a partial list as I spent the day getting a new 5/8 wave
antenna 35 foot off the ground. Hearing N2VRJ and PA3EUG very well.
QUESTION: There is a strange signal that comes on precisely at 45 seconds
past the minute 183 hertz above N2VRJ and 160 hertz above PA3EUG. Signal
duration is one second. It looks like some sort of PSK signal as three
spectral lines are shown, carrier and two on each side 120 hertz away.
Unfortunately, the carrier and associated line shift upward in frequency
about five hertz during the one second transmission.
     I'm asking this as it might one of our group trying to get on but
over modulating badly or with a bad case of power supply ripple. There
seems to be no PSK31 type information on the signal so, alternately, it
might another form of PSK beacon. Anyone know or see this on your
spectral display? Cliff K7RR

Maybe I'll hear something soon...

I just moved the radios a few feet. I'm still unpacking my junk at this place and will likely move stuff many more times before I get everything out of the boxes.

The only problem with using a transverter is that I don't have any HF capability right now. I'm saving up for a new HF rig a penny a day. I want a 756pro, so it's going to take a great many days!
(Contributions are always welcome)

Anyway, I'll putz around on 6 until tomorrow sometime. Then I'll be off the air until next weekend.

Karl, N3APZ

PSK31, 2345 UTC: N3NRG and PA3EUG faded out. The one second burst
signal also faded out indicating that it probably is on the East coast.
N2VRJ still in there but just about gone. KD5CFB pounding in now,
actually reading S5 on the meter both PSK31 and CW. 73 Cliff K7RR (CM95)

How does everyone else have the value of scan set in the PSKServe program.
I currently have a value of 200 set. From the prop report I get sent, it
appears that I may be missing the first part of the call signs, but seem to
be getting a good copy on the locator square.

Rendered body type: text/plain
```

Arrived back home in the early afternoon from the holiday weekend ... and
of course immediately turned on the rig to 28.131!

My catch this evening - one time only for each station but strong signals
for both:

K7RR CM95NI 9/4/01 23:30 UTC
N2VJR EL86TX 9/5/01 00:20 UTC

Not sure about the propagation mode. Things have been real quiet here
lately. Often pick up west coast stations in the early evening on 10 meter
SSB, but the FL station is unusual.

That's my experience with a 200 scan as well. I've even tried adjusting the
delay values but that didn't seem to help. Typically I'll run either 100 or
150 for the range. That usually works although sometimes it'll get confused
if I have the squelch real low.

Hey guys, I'm going to shut the transverter down early. I walked out to my car a few minutes ago and took the HT with me just to see if anything was happening elsewhere on 6. I happened to catch my system cwid, and although I had the squelch wide open on the HT, I was over 400khz away from the beaconet freq and picked up splatter during the id.

Needless to say, I won't be using the transverter until I can get it in to work and put some test equipment on it.

See y'all back on 10.

I usually have it at 100, but moved it to 150 when I noticed some stations who
were further of the 1500 mark.

I was just curious as to how many of us send are call and grid
twice per tx. I find I usually completely copy the second set
of those that do and miss the beginning of those who don't. Seems
send it twice as opposed to sending email addresses might help.
Just an observation. :)

I'm using a scan-width of 150 fairly successfully. I wonder if speed of
the computer has any bearing on the effectiveness of this setting.

I just forwarded your eMail to the European-laden UI-View list with the
hopes of getting some interest over there...with a plea for Europe and
Australia. Let's see if we get any interest by the winter DX season.
:o)

Here's looking forward to seeing your RF in New York, Wayne! :o)

Rendered body type: text/plain

Ev,

I'm up on the psk31 28.131 frequency. I seem to have a config issue that is causing some problem. I had originally set up UI-View to run with AGWPE. I went thru the setup for psk on beaconet and that seems to work but it looks to be trying to connect to AGWPE still. (I think I know why because its set up under the comms entry.) I think it broke when I tried to disable AGWPE in the menu. What needs to be set up in the comms menu to work correctly?

Thanks in advance for the help.

Funny you should mention that. I was on several months ago and just now got set back up (after a move to a new house). I set up originally on AX.25 and saw that everyone is doing psk31 so I switched over. I don't know though how many still are on AX.25. Maybe you ARE the only one! ;-)

Hi Ben...you aren't running WinNT 4.0 are you? AGWPE does some ungood
things to me here on this machine, one of which is not playing nice with
the other children that want to use the sound card. I always have to

reboot after using AGWPE if I want it to release the sound card for PSK31srv.

Sounds like your UIVIEW and PSK31Srv don't want to connect. I had the same
problem.

The solution is to answer "yes" to the "connect to APRS server?" question
when you attempt to connect. Then it will do things right. I am not sure
what the exact problem is, but it has to do with UIView's APRS server
interface.

Are you using UIView16 (not reg'd) or UIView32 (registered)?

I'm running a registered 32 bit ui-view. The strange thing that is
happening is that it is trying to transmit 2 different packets. The first
appears to be the correct packet and the second has a TCPIP routing in it:

KC5NFU>HY0G02:
[EM12RW] benm@uniplex.com

then what appears to be the bad one:

KC5NFU>HY0G02,TCPIP*:
[EM12RW] benm@uniplex.com

I have rebooted since running AGWPE and I'm running 98.

What do you have set up in the Comms setup in ui-view? Either that was left
out of the setup instructions or I just flat missed it (multiple times).

I just had it working a minute ago (but sending the TCPIP packets too) but
then I had the transmitter hang for upwards of a minute.

Hmm....

Any help appreciated!

Ben Miller

Hi Ben,
Welcome back! Bands have been hopping lately. Sorry for the delay in
replying. I work for a k-12 school...and today was the first day of
school. It's been exhausting getting things up in time (it's a loooong
story, but it has a little something to do with a couple of punks who
decided to torch one of our elementary schools at the end of last
year...and our Superintendent's promise to the community that things
would be be 100-percent by today). :o)))

Anyway....Ive got to tell you the absolute truth. Take it as my
experience in dealing with UI-View systems: they work well when you
start with a pristine load, and can act goofy if there is anything
kind-of goofy about a system.

That having been said, I'd *strongly* suggest that you:
o write down your registration number
o uninstall UI-View (using the uninstall routine)
o manually delete all remaining UI-View files (there will be some
  left behind). Don't pass this step. It's important.
o uninstall AGWPE
o check to make sure that there is nothing remaining there either
o uninstall PSK31srv
o check to assure that there is nothing left here, too

then

o install PSK31srv and configure according to website instructions
  - http://go.to/BEACONet
o install UI-View

Viola! I'll put money on it working perfectly. :o))

Have you checked to see if anything left from AGWPE is still in task
manager?
What SP level are you running?

I'm donating some computers to the club and was going to load NT4 on at
least
one of them and expect that someone will eventually try using it for psk and
packet.

Just trying to get an idea of what problems I might encounter when the
computers
get installed...

As far as I can tell, the TCPIP line is supposed to be there. It doesn't
interfere
with my system and I suspect it has to do with communication over port 3131
to
psk31srv.

For com ports, I have mine set to NONE, since psk31srv is handling the
communications routing.

It looks like things are cooking E-W today! Nothing from the east coast
for me. Take a look at this:

I am taking mu beacon off the air. I have discovered I am getting some TVI
all of a sudden. Need to check grounds and feed line as soon as time

permits.

Jeff Steinkamp N7YG

Hi Ben,
The uninstallation process really doesn't take very long (seconds,
actually). Don't let it discourage you. The big x-factor is
AGWPE...which I have no personal experience with.

Here's looking forward to seeing you on the map soon!
Ev, W2EV

114. [propnet] catch of the last 13 days (10m BEACONet^31)

From: Ramon Kolb <ramon.kolb@usa.net>
Date: 7 Sep 2001 09:19:59 EDT
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-34673-2001.09.07-08.43.50--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Here are my listings for the last couple of days. Maybe I should make a
compilation once every so often and mail it out...

Note that my expiration time is set to 2880 minutes (48 hours) so you may see
stations up to 2 days old in each list. I guess I should reduce that to 24
hours if I make a daily snapshot.

By the way, I am making MINUTELY snapshots right now using the SCHEDULER. If
someone is interested, I can mail you a copy of my scheduler.txt setup file so
you don't have to type it all in....

Folks, again, please make your pre-amble long enough for PSK31Srv to "lock on"
to your signal...

I have seen a lot of new folks. WELCOME!!! Please stay on as much as you can.
As you can see, there seems to be a "weekend peak" and a "midweek low". I am
pretty sure that is not so much propagation related as it is activity
related....

Last, but not least.... for some days, the "station counts" are off. This is
because I cleaned out the list: if a REAL CALLSIGN is received, and on top of
that I receive a whole bunch of misfits for the same station, I erased the
garbled entries from the list.

Thanks,

Ramon w1/pa3eug [fn42ki] Boston, MA, USA

Rendered body type: text/plain

How do you make these reports? Are they hand-made or automated? How do you log
the first/last time?

Thanks,

Ramon

Roman

It is a program I am developing similar to the one offered by the chap in VK land. I am testing it now, but I still have a bit of work to do. If you would like to evaluate it, I would be more that happy to send you a copy.

Jeff N7YG

Subject: [propnet] Re: [BeaconNet(PSK31) Prop report - 2001-09-06 21:00:56]

How do you make these reports? Are they hand-made or automated? How do you log
the first/last time?

Thanks,

Ramon

Mighty big jump in location Ev! Send a postcard when you hit land.

Still waiting for KD5CFB to get stronger and plot. Heard a fragment from Ramon once, right after I booted up and turned on the rig.

All in all, not bad for a morning.

Karl, N3APZ

Jeff,

Have been "admiring" your last several reports and glad Ramon asked about how you were preparing them. Would be glad to help evaluate/test your program as I think it's something that will really be handy.

Bob - KC5DUI

Cool, you saw my lighthouse.

I am running some experiments with a COMPRESSED APRS BEACON running in
combination with the usual "de pa3eug [fn42ki]" stuff. Length-wise there is
not much difference between either method. I want to keep on sending my
locator ([fn42ki]) at least once every transmission to allow non-APRS psk31
watchers to get my location info as well.
Any comments? Suggestions?

All the regulars are on now! Ten meters is open. K7IP came on half an
hour ago. He and N3APZ appear to be spot on 1500 hertz.
     Some curious signals appearing higher in frequency. I'm very
interested to know what is going on. At 1825 hertz center and +/- 50 hertz
modulation, there is a digital signal coming on every 20 seconds. It
seems to be coming out of Europe. Previously I reported a carrier but now
the +/- 50 hertz is appearing, probably due to better signal strength.
    A 2300 Hertz, there is a signal that appears like PSK31 but is an
alternating carrier, proper bandwidth but switching between mark and space
at five second intervals. Strange indeed! Any information available?

Seems to be one-way comms from the west coast right now. K7RR and K7IP are
pounding in here but I don't get any ack's to indicate a return path.

Oh well.

As far as other signals, I don't see any.

Karl, N3APZ

I recall someone saying that they found the
circuit diagram of one of the Radio Shack
transceivers (was it the HTX-10) on some
Radio Shack web site.

If my recollection is correct, could someone
please refresh my memory as to that
location.

Hi Doug and the group. I am hearing that voice as well. It was louder
this morning than this afternoon. Some of the East coast signals are not
strong. That may explain Pugent Sound/CenCalif difference. Cliff K7RR

Since I'm awake and bored (this is my normal sleeptime), I decided to see if I could get the system to gate messages. It seems to me that since we're accessing psksrv through a logical port we should be able to use the igate feature of ui-view to send routed packets back out to psksrv (am I making sense to anyone?).

So, just for kicks, I've enabled the igate options. If anyone can consistently see and get acks from my station, try sending a message to me and see if it gets repeated.

It's just a test, and I'm curious. If it does spit out the message, let me disable the thing before you try it. I don't think it'd really be a good idea if everyone repeated everything, although it would probably attract a lot of attention.

WHOA! While writing this and listening to the rig, I just got a huge increase in background noise and the psk window went completely yellow! It's now subsiding, but did anyone else see that (around 5:35 pm eastern 9/7? It's certainly not splatter...

Rendered body type: text/plain

To put my report in context, my QTH, while
ideal from many aspects, is about as bad
an HF location as one could imagine. We
sit in the middle of four major Navy
installations the farthest of which
is a little over one mile away.

To put this in visual perspective, if RF were
black smoke, the skyline would look like
Pittsburgh, PA, the USA during World War
II.

Accordingly, I had just about given up on doing
anything with HF when along came PSK31.

Again, to put the report into perspective, some
transmitter (radar?) puts out 220 ppm pulses whose
sub-harmonics, super-harmonics or intermod
products make the low end of the 10 meter
band sound like the ignition of a 1936 Ford
connected is to the receiver.

But, and here is what is pleaseing about
PSK31. If one locks on to a DX PSK31 signal
that falls between the lines of these pulses on the
waterfall, he can get just about 100% copy.

To me, that is impressive.

Either you are at Keflavik Iceland or the Canoe Club there at Newport News
VA. In either case I can sympathize with you. Back in 1983 I ran a mini
dx'pidition from Keflavik. Sunspots were almost non-existent. There was a
25KW Navy RTTY station on 2.5 MHz located exactly 475 meters from my
location. This was a 100% duty cycle station. I went through 9 front-end
notch filter in the year I was there. Sure wish PSK31 was around then.

Hi, Jeff,

Would you believe Coronado, CA?   North Island Air Field,
West Coast Seals headquarters, Point Loma Submarine base
and Training Center and 43 "ships of the line" in San Diego
harbor and environs.   When the John Stennis aircraft carrier leaves
port with its powerful radar, our phones "ping.".

73,

Ed

Version 1.1 of UIMailer is now available. I add the ability to select UIView's default directory to where ever you place it. Just make sure the snapshots appear in the snapshot subfolder. I also removed the hard directories from the zip file. Got the WebPages up and running so take a look at:
http://home.earthlink.net/~n7yg/uimailer.htm

I have not test this on a telephone dialup account as I have a full-time connection to the internet.

BTW Roman, do you use phone dialup at home. If so I would like to know if this will work on a dialup PPP account with out having to run a script to actually log into the dialup account.

Looks cool from the "outside" :-). I cannot run it in my "life" BEACONet environment because UI-View is not installed in the standard c:\program files\peakview\ui-view32 directory but it "D:\UI-View32-HF" ....

I will have to test it at work on Monday, using "life" APRS.NET feed.

Actually, I'm off HY for a couple of days. I've got some VHF Contest
Rovers playing on 53.53 BEACONet, being tracked for the contest, and
I've focused activity there.

2-meters seems to be alive, east of the Mississippi. Take a moment to
QSY to 147.585 and see what you get, if you'd previously stopped
trying. There may be some interesting things to be seen there.

Hi Rich

No, you are not alone. I run PSK & AX25 side by side. I have been on vacation
and just got home today. My beacons are now running after a week of absence.
I firmly believe that AX25 is vital to propagation study.

Although my PSK beacon reeks havoc on AX25 I set my PSK beacon to 7 minuets
as to minimize interference with AX25 RX.

I agree that AX.25 is a vital resource. Just take a look at the full motion screen capture (a 10mb download) on the website. That was by AX.25. PSK31 doesn't digipeat...a vital resource to propagation tracking. We're simply playing to see under what circumstances certain features are useful right now.

Rick and the group. I'd be glad to run with you on AX25 and 28128 FM
(1200 baud) if you would like. The signals have to be very strong to be
of any use but they have been lately. Would you like to do so just for
Sunday the 9th for a experiment? Cliff K7RR

Cliff,
28.128 is USB. FM data is not allowed for USA hams.

Oh, oh! mistake on my part. Of course we should be on 1200 baud USB on
28128 kHz. I should have known better as the radio I use is incapable of
FM! I'm going to set up there as I have not heard from Rick. Possibly
others can make a one day experiment of it while the signals are strong.
The usuals are coming in well on PSK31.   Cliff K7RR

150. [propnet] Back to AX.25 after tonight for me

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Sun, 09 Sep 2001 13:53:41 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>

Rendered body type: text/plain

I will be QSYing back to 28.128 USB AX.25 after this weekend's playing
with VHF Contest rovers. Not because I'm not fascinated by our PSK31srv
work, but because I'd like to run a log for a couple of days and see
what happens.

If you have a TNC, be sure to use KISS mode.

If you don't have a TNC, you will need to use a "TNC Emulator" for your
sound card (a different one than PSK31srv). It is called AGWPE. Get it
on the website (http://go.to/BEACONet) under the heading "No TNC? No
Problem!".

Advantages of AX.25 include the ability to digipeat. Why is this an
advantage? Because the band could be open from N2VRJ to WD4RBX and from
K7RR to WD4RBX, but not from N2VRJ to K7RR. By digipeating, all three
will know that the band is open, and in what direction. There's no way
to do that on BEACONet^31 right now.

As long as conditions are "up" this may be a good opportunity to play on
HY-BEACONet (28.128 USB @ 1200 baud).

Ev, W2EV

EV

Have you got AGWPE to work in the receive mode. I have it but I have never
been able to get it to receive even though I can hear strong signals. I
have tried hooking it up to the 2 meter and monitoring the APRS freq. and it
seems to work there, but then again all the signals are full qui\eting.

I may try and wire in the ole PK88 and see if I can get that to work. Will
attempt that after I get back from classes tomorrow morning.

Jeff

Hi all

Here is what my BEACOnets cough during the last 26 hours. FYI the egg frying
noise has been rough here for quite some time and I have found that (RX)
PSK31 has no advantage for ME because I need a strong signal for a good copy.
Just look at the AX.25 stations copyied from LU3AVO DIGI and none on
BEACOnet^31. It looks like the Egg frying noise is killing weak signal PSK
for ME. Times are UTC.

```
Hi all

Here is what my BEACOnets cough during the last 26 hours. FYI the egg frying
noise has been rough here for quite some time and I have found that (RX)
PSK31 has no advantage for ME because I need a strong signal for a good copy.
Just look at the AX.25 stations copyied from LU3AVO DIGI and none on
BEACOnet^31. It looks like the Egg frying noise is killing weak signal PSK
for ME. Times are UTC.

Yes I do use phone dialup. I actually encountered a website that describes how to dial using predefined password, set up a connection and break it off afterwards. I only have to find some time to implement this all :-). Maybe this week.

By the way, I will be gone (in Europe for work) from Monday Sep 17 to Friday Sep 28. I will probably be off the air for that period. As always, my travel plans aren't final until I actually get back to Boston ;-)

160. [propnet] Search & Rescue: Flares vs. Meteors

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Mon, 10 Sep 2001 07:10:54 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-35309-2001.09.10-06.36.46--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

A while ago someone asked about this. I went on to describe a system
that includes having an observer listen for meteor "pings" while
observing for emergency flares.

Well...it seems to be an easy thing to do. :o) Look over the link below
to see exactly that in action.

Ev, W2EV

- -

The streaking Perseid meteor in this 3.9MB video was captured by Bill
Cooke and Rob Suggs (Marshall Space Flight Center Space Environments
Group) using a GEN II intensifier and a 50 mm lens. The sound track
plays the meteor's 67 MHz radar echo. The eerie sounds were recorded by
a forward-scatter meteor radar in Huntsville, AL.

Nice going Jesse! If you hadn't been showing me in your report I'd of thought my antenna had fallen down. Haven't "heard" a thing here in two days (had thunderstorms before that) except noise. Have some of the broadband type noise just wiping everything out. Since you saw me today I'll let the system run for another 24 hours to see if I get lucky.

164. [propnet] BEACONet^31 - 10 Sep 01

From: "KC5DUI/Bob" <kc5dui@hotmail.com>
Date: Tue, 11 Sep 2001 00:47:09 -0000
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-35432-2001.09.10-20.11.14--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

After seeing Jesse's message with several stations decided to look at the terminal screen to see if I'd missed something today and found this:

```
K7IP>:>101521 IOTA NA-065 Whidbey Island, WA BEACONet Station, see May 2001
yST  tor details
K7IP>:hy1eb5-6:[cn87sw] -- k7ip>hy1eb5-6:[cn87sw] {UIV23}
```

By counting back on my transmissions it appears to have been during the 2300Z hour. I went to the PSK31Srv screen and did a cut/paste and then send to client put it on my map. Could have missed some others as I had to do a shutdown on the computer to clear our router for the cable modem and didn't bother to check the terminal screen before I did it. Don't know why it didn't plot out.

As I'm typing this (0044Z 11 Sep 01) just had a nice strong signal from WD4RBX that cut right through the noise and plotted on the map so I guess the settings are still valid.

Thanks for the report Bob. That's about when I turned the beacon back on this afternoon...I was at work most of the day.

I'd love to reply to your one-liner, but no matter what I do, I can't get this silly thing to transmit a message after I enter it. I know I'm doing

something wrong, but I can't figure out what.

       This could be causing UI-View some decoding problems.
       There is not normally a colon at this location. FYI.

I don't know where that colon is coming from, I didn't enter it into
anything....just check all the setups, too.

But that's not the one-liner problem...I can enter the message and the
recipient, but it never keys the transmitter or gets sent.

Doug, Are you changing port 1 to port I (i) ?

Rich

> But that's not the one-liner problem...I can enter the message and the
> recipient, but it never keys the transmitter or gets sent.

PSK31srv communicates with UI-View by appearing as an Internet host.
That's why you see the "*" in a Station List. The program thinks it's
getting data from the Internet, so it sets the Digipeated Flag (even
though we know that it is coming-in direct).

As such, you will need to set your port to "I", rather than "1". Now
that I think about it, I think the directions on the website don't say
that. I'll have to update them.

Still, though...go drilling for that extra ":" to remove it. It's going
to cause problems in decoding.

Even so...Welcome Aboard!
Ev, W2EV

Thanks :-)

I am running 70 Watts from using a Hussler mobile antenna, at the roof (abt.
100 ft above the street). The antenna is really minimal... but seems to work
well for 10 meters.
If I have time tonight (It's a little hectic here.... my father in law is
stuck in Manhattan) I will install the auto-report email software that Jeff
N7YG has been sending around.

Hi Doug,

Wish I was home when you sent the messages yesterday and today! Checked
thru the terminal screen and saw you also sent a message to PA3EUG but
couldn't see anything from him on my screens. Did you get the ACKs my
machine sent out to you?

If you're going to be on Saturday I'll try to keep an eye on the screen and
see if we can "exchange" messages.

Bob - KC5DUI - EM26WE

Hi folks,

I *finally* configured my PC for automatic reporting to this list. Starting tonight (if everything works well) at 23:56 EDT, you can expect an automated report of the day's activity.

Thanks to Jeff N7YG for the program!

--Ramon W1/PA3EUG [FN42KI] Boston, MA

Kind of errie!

Interesting quote found in the writings of Nostradamus:

"In the year of the new century and nine months,
>From the sky will come a great King of Terror...
The sky will burn at forty-five degrees.
Fire approaches the great new city..."
  "In the city of York there will be a great collapse,
   2 twin brothers torn apart by chaos
   while the fortress falls the great leader will succumb
   third big war will begin when the big city is burning"

What's the file format of your attachment?

Please try to avoid using attachments, just copy&paste plain text please...

thanks,

--Ramon W1/PA3EUG, Boston, MA, USA [FN42KI]

Hi, Ramon,

Application is Microsoft Works.

I use a variety of programs to decode PSK31
(not always UI-View) and several computers
with several receivers monitoring different
PSK31 frequencies so sometimes a copy,
copy, paste on to a floppy, edit and then
pick up as an attachment is the lazy man's
way.

All of my machines have Norton up to date
so there is no danger of a virus in the
attachment,

but, yes, I know, others do
not use attachments as freely as I do.

73,

Ed

It may the the "lazy man's way" at your end, but at my end I have to jump
through hoops to delete your attachments. I agree with Raymond. Please

don't use them.

I might as well contribute to this although I feel that the "computer
twigget" has long passed me by. But I still have a partial voice!!!
Who in hell cares about these unknown and codes put upon us by microsoft
and other similar jerks, some of them in the UK??? I don't and I have a
valuable contribution to make, but if I have to sustain UI-VIEW and other
programs issued to make the author look good while making the rest of us
look bad, so be it. I'm gone and I know more about propagation that these
jerks ever thought of knowing.
     I sure as the devil have more important things to do than be a idoit
to computer operation than omit what ham radio is about:
COMMUNICATION........not damn fool computer operation!
     Sorry Ramon, you seem to worship this garbage. I do not and will
never do so until a SIMPLE program can be written, all inclusive on a
1.44 Mb disk, that will work faultlessly with out my needing to spend five
hours of frustration!!! Otherwise, I'm GONE!   Cliff K7RR

Rendered body type: text/plain

Question for the group or perhaps you can
answer for me, Ev..

In spite of the package delivery delays due to
the terrorist problems this week, the RASCAL for my
HTX-10 arrived and I set up the system for
BEACONet-ing on 28.131mh.

I may think of the answer to this one by morning
but right now I wonder if anyone has the quick
"oh, yeah" for me.

With the RASCAL cables connected per instructions,
if I use the PSK31srv program WITHOUT
the 32 bit UI-View Program enabled, the computer
shows the usual waterfall and I get audio output
from the transceiver.

The moment I enable the UI-View program itself,
however, the audio output from the transceiver
appears to be disabled.

When I go through the usual
"Action, Connect to APRS Server" step, the
beacon transmits as it should, no problem,
but there is no audio out of the transceiver
when the beacon is quiet.

Have others run into this? (This particular computer
still has v1.40 on it but I can't see why that would
be the problem.)

Paranthetically, I don't have a similar problem
with WinPSK. That is, I can transmit and
receive normally with the setup. During transmit, the audio

is disabled, of course, but the moment transmit
ceases, the waterfall comes back on.

Seems like I have some flag set wrong in UI-View.

73,

Ed

Cliff,
The thread started as a result of one of our members sending an
attachment to the listserve. To most, that is not appropriate -- for
many reasons. The issue was raised and resolved.

Your reply seems disconnected with the thread.

No positive outcome is gained by berating people or products simply
because someone's interests are different or because they can't get them
to work. Folks like Roger, Ramon and Jeff build the blocks that we use
in our endeavors. The BEACONet community is better because of their
activity.

May we help you to get those building-blocks working better? Your
frustration in getting them to that point is loud and clear...yet there
are at least a dozen active 10-meter BEACONet^31 users here, ready to
help.

Ev, W2EV

Good Morning, Ed,
As it turns out, Jesse (N2VRJ) uses this configuration...but with
UI-View 16 (I think it's th 16-bit version, anyway). Maybe he can shed
some light on how it works for him.

If I understand correctly, for you...
o The Rascal/HTX-10 system doesn't pass audio when using UI-View32
o It *does* pass audio when you use any other PSK31 software

Is that right? Jesse, how does it work for you?
Ev, W2EV

Rendered body type: text/plain

Hi, Ev,

After I sent my query, the obvious
problem presented itself to me.

When I load UI-View after having
PSK31srv running properly, the
computer begins sending a transmit
signal to the transceiver through
the serial port and keeps
it there no matter what other things
I do until I shut down the programs
and turn the computer all the way off.

That of course is why the
transceiver audio is muted
but I was too sleepy at the
time to perceive the obvious.

Now to figure out why that
computer is doing that.
I suspect that I have some
attribute in the UI-View
Setup incorrect.

How dense I can be at 3:00 A.M.!

200. [propnet] Setup Question "Resolved"

From: esack <esack@pacbell.net>
Date: Sat, 15 Sep 2001 08:12:17 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-36333-2001.09.15-10.33.09--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi, Ev,

Well, here is one for the "what can go
wrong" book.

I find that if I load PSK31srv first and
then load UI-View 32, the first time
the beacon transmits after giving the
program the "Action/Connect to APRS server"
instruction, the transmit signal
 "sticks on." That, as I said,

was why I was not getting audio.
The transceiver was remaining in
transmit mode even though the
warble modulation had ceased.

HOWEVER, if I load UI-View first
and then load PSK31srv and go to the
"Action/Connect to APRS server" enable,
everything works just
fine. The transceiver comes on to accomodate
the sending of the beacon and then goes
off after it is sent.

This is a "work-around" but of course it does not
explain the reason.

I know that he does not want to get involved in
PSK31srv but maybe Roger can
hazard a guess as to why.

By the way, I am copying two BEACONet
signals out here this morning, wd4rbx and
ku5w. One would expect, then, that my
signal should be showing up somewhere.

(And I promise never to use an
attachment with this discussion group
ever, ever....!!)

73,

Ed

Cliff,

actually I think I didn't understand your email completely. My greef was with
people sending attachments (especially in formats I can't read...) to the
list. I *do* absolutely encourage people sending lists of received stations to
the list, I think seeing the stations other people received are as important
as seeing what we received ourselves in this propagation experiment.

I agree that the UI-View/PSK31Srv setup, combined with optional "add-ons" like
UIPath, UIMailer, and AGWPE can be complex. These programs are rather generic
and very versatile, but for now (at least in my opinion) they form the best
solution towards an automated 10 meters propagation data collection system.
After initial setup, only little "tweaking" is needed in order to allow
continuous functioning. The propagation experiments we can do with these
programs are very diverse.

In the mean time, if you have any problems setting up your software, we are
all here to help (as Ev already said). The first step towards learning about
any natural phenomenon that is not directly visible to the eye, is to learn to
use the tools of the trade. You've come to the right mailing list for that
here...

73s,

--Ramon W1/PA3EUG, Boston, MA [FN42KI]

This is a result of a failure to pay attention to the email address as I was
testing out some changes I was making to the UiMailer Program. The fact
that it was a bit late in the evening my constitute to this oversight.

Jeff

>Application is Microsoft Works.

Which is yet another problem with using attachments in an open forum.
Their use presupposes software components on the receiving end that some
participants may not have.

I for one not only don't have Microsoft Works. In fact, I don't have
Microsoft anything. I just plain don't do Microsoft. period!

204. [propnet] UI-View "best dx" option

From: Ramon Kolb <ramon.kolb@usa.net>
Date: 15 Sep 2001 11:41:38 EDT
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-36343-2001.09.15-11.05.56--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Folks,

I had a small exchange of email with Roger Barker about the following: if we
could add a minor option that allows reporting the "digipeated" best DX in the
status field (instead of just the "directly heard" best dx), we could actually
transmit the furthest station heard in our beacon at regular intervals....
Looks to me a good feature to have since we can transmit a life indication of
how the band is doing.

Roger promised me to add it to the wish-list for future releases.

205. [propnet] UiMailer V1.2

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sat, 15 Sep 2001 10:36:56 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-36347-2001.09.15-13.01.31--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

UiMailer V1.2 is now up on my web site. I corrected a few unwanted
programming "features' and added the ability to perform a basic check of a
callsign. This function, while not foolproof, will check a callsign against
a template of valid callsign constructs and eliminate some the of junk from
a broken callsign. The new feature can be turned on and off at your
leisure.

I also updated the saving of the configuration information. As I am using a
different manner to access the registry, you will need to re-enter your
current configuration and save that configuration with the button provided.
As the previous method was a bit unstable, I highly recommend everyone to
download this update. It will return a few system resources and keep Uncle
Bill's blue screen of death caged in it's proper place.

Hi all,

Had a nice shot at K7IP between 1912-1927Z but from about 1935-1958Z have a strong signal showing at 28.131.00 + about 1530Hz that is pretty much steady. Just using a dipole so don't have a direction on it. Anybody else see this??

Rendered body type: text/plain

I'm hearing a new station.... Welcome W1BW !!

Just a small remark regarding your setup: most people will not be able to copy your full long/lat flawless because of propagation shifts we are experiencing all the time. So it may be better if you switch off that part by simply removing the long/lat from your setup->station setup settings for Beaconet.

I am running a longitude/latitude experiment using "compressed data" format, just to see if we can get it out there. The compressed info takes about 14 ASCII characters instead of the 8 characters needed for your [FN42KI]-style locator.

Cool to see someone else from the Boston region. I haven't seen anybody here on 10 meters for days/weeks/months. N1NCO was the last one to be here, but he disappeared from my screen a while ago.

Ramon et al.,

> I'm hearing a new station.... Welcome W1BW !!

Thanks, and hello again, everybody. I'm trying beaconet out again after a few
months of layoff.

I had previously been on for a week or two using ax.25 on 10, 6, and 2m. But most
of the 10m action was switching to psk, and I never copied anybody on 6 & 2. I
was then running under linux, and was actually using one rig (ic-746) multiplexed
across all three bands (rotating about 2.5 min per band). A storm-related shack
computer failure ended that experiment, and I am finally about to replace that
machine in the next week or two.

Temporarily up on Beaconet^31with UIView under Win98 :-(on a laptop on 10m.

My only solid copy this afternoon was you, Ramon (14mi away!), though several
partials from WD4RBX and others.

My personal wish is that we were all using the same mode (either ax.25 or psk31,
or even adapting wsjt) on all bands, as it makes it easier to do the multiple band

monitoring I was doing.

> Just a small remark regarding your setup: most people will not be able to copy

Rendered body type: text/plain

Seems the Lyris emailserver doesn't let me send a message with the same 1st
line every day... so here's the (belated) report from yesterday resent by
hand:

Yes, I have also seen that a few times and I will include the subject line
as the first line of the body of the message along with a date/time stamp.
Will have that up on the web site as version 1.3 by tomorrow.

Jeff

225. [propnet] Re: [UIMailer] email server problem

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sun, 16 Sep 2001 09:10:59 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-36458-2001.09.16-11.35.39--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Doug and all

This problem appears to only be related to WinNt. As I am not an NT guru, I do not understand what this means. If there is an NT specialist out there that would interrupt this, I would be very happy to hear from you. I have an old military buddy over in San Diego who just took the NT test, so I will pose this problem to him and see what comes up.

Jeff

226. [propnet] UiMailer Version 1.3 test

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sun, 16 Sep 2001 09:14:00 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-36461-2001.09.16-11.38.37--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Shortly you will see 3 bogus email messages from my Uimailer to test the
problem the list server has with messages with the same first line. I will
separate them by about 1 minute or 2. The data in these messages are a
combination of a few previous days snapshot file I concat'd together for the
purpose of testing.

Rendered body type: text/plain

My PSK beacon is back up today and will run throughout the day. I have back
the output down to 25 watts because of the TVI I've experienced in the past.

Jeff Steinkamp  N7YG

233. [propnet] neat little batch file

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sun, 16 Sep 2001 11:05:48 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-36473-2001.09.16-13.30.39--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Here is a neat little batch file I created and dropped into the Program
Files\Peak Systems directory. Launching this batch will automatically
launch PSKSrv, then uiview32. You can then create a short cut on the
desktop for one stop clicking to launch everything.

```
cd PSK31Srv
psk31srv
cd ..
cd "ui-view32"
uiview32
```

Place these commands in a file called uiview.bat (or whatever you want to
call it) and place in the Peak System directory. This of course assuming
you have everything installed in the normal directories.

Works pretty good. Now all I have to do is figure out how to automatically
connect to the APRS server on program launch.

I have totally eliminated UIPath from my machine. This program does not
play nice with socket 3131, which is the socket for PSKServ.

Automatically connecting to APRS server is simple. add the following to your
SCHEDULE.TXT:

+1 APRSERVE_CONNECT

You can also do that by selecting the correct command from the Schedule
Editor GUI, and configure the time to be "+1" (without "").
By the way, I added both UIVIEW and PSK31Srv to my Start->Program
Files->StartUp menu. Brings them up and running nicely everytime I reboot...

Rendered body type: text/plain

Hi, Ev,

Thanks for the encouragement.

The good news is that another
Southern California BEACONet*31
station may be about to hit the ether.

Dave Donnelly @ KF6XA tells me that he is
assembling an HTX-10 + RASCAL setup
and since I think that he has a much
superior QTH "HF wise" to mine he should put
a signal on the air that is heard by
the "East of the Rockies" group as
well as the "Northwest" group.

Dave was waiting for some bits and pieces
to come by UPS, etc. but advises that he
may be on the air by this weekend.

By the way, whereas I can't put a decent
10 meter antenna up here in the condo, I
am thinking about getting a "gain" 10 meter
antenna for the boat and giving BEACONet*31
a "shot" from on the water.

(Maybe I am ill advised to use the word
"shot" since the Naval and Coast
Guard water patrols here seem to have lost their
sense of humor in recent days!! And, of course,
that is good news in these times.)

As to the "voting," to the degree that I
can contribute, I also favor
BEACONet*31 for HF and BEACONet
for VHF.

73,

Ed

W3NRG

I prefer BeacoNet because it's just so simple to get going, both with
hardware and software.

And since it seems to require slightly better propagation conditions to show
success, I think it is a better indicator of when SSB communications between
two locations are possible.

Rendered body type: text/plain

Hi Jeff

I was in the shack today when your beacon started coming in. You might want
to check your radio dial. Looks like it got bumped. Your audio frequency is
about 800 Hz.

Rich
WD4RBX

247. [propnet] Re: Attention N7YG

Rendered body type: text/plain

Thanks

It did get bumped. I was at 28.130.36. Evidently while I was doing college homework, I must of bumped the dial while shuffling papers. The dial lock is now set.

Jeff N7YG

Hi All

I find this interesting.BEACOnet^31 All I heard today was N7YG who has been
coming in just about all day. BEACOnet LU3AVO came in today as usual.

Rendered body type: text/plain
```

```
FYI...
Ev, W2EV

Below is from the author of AGWPW...

I have just uploaded the new version. Now bot sites are working
www.elcom.gr/sv2agw
www.raag.org/sv2agw

The new version has
1.The 300b HF modem and the tunning aid optimized.

2.The sleepy frame problem corrected. In fact it was a DAMA side effect.
Now both DAMA and EAX25 monitor support are user configurable. This
means that if you are using a DAMA server you have to turn on DAMA
support from properties second page for the specific port.

3.Found, yesterday night the PTT hung on problem and corrected it.

4.2001.38 is a stable version.

Right now i am writing other programs, not related to packet. But i will
try to write a new modem for the soundcard it will be a qpsk modem
capable for high speed with no special tranceiver. I am investigating
the possibilities.................Lets see!!!!!!

Gang,

Not that anyone will likely miss me, since I've only been back on a couple of days, but W1BW will be off the air until at least Monday (out of town). I finally got my replacement shack computer, and I'll be figuring out what I want to do with beaconet on a more permanent basis when I get back.

262. [propnet] w1/PA3EUG off the air Sep 20-28

From: Ramon Kolb <ramon.kolb@usa.net>
Date: 19 Sep 2001 07:22:33 EDT
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-37160-2001.09.19-06.46.53--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi gang,

It will be quiet from New England...
First Bruce, and now me.

I will be travelling to Europe, leaving Thursday Sept. 20 and returning
Friday, Sept. 28. In the mean time, my beacon will be off.

Expect me back on 10 mts BEACONet^31 starting Sept. 28.

Thanks,

Ramon w1/pa3eug

ps. it's a pleasure to see these maps with the four corners of the USA
covered: K7IP in Washington (northwest), myself and W1BW from Massachusetts
(northeast), N2VRJ from Florida (southeast) and N7YG from Arizona (southwest).
It's a pity that there are no Europeans or South Americans participating on a
regular basis in BEACONet^31 at 28.131.

I noticed a discussion about attachments recently and it seemed the
conculsion was that attachments shouldn't be inculded in our messages. Also
it seem that there is another worm about. So since the sender's don't varify
that they have scanned the message prior to sending them, we don't know what
they inculde. So PLEASE don't send attachments! I don't read them and it
just waste bandwidth. Thanks Don NJ2E 73s

This does not look good. Not getting any propagation in your area or might
there be a problem with the program??

Jef N7YG

Rendered body type: text/plain

Not just off the air for travel.... I got to my station this morning to find
the power supply has given up on me. The fuse must be blown or something,
but since my Astron RS-20A doesn't have an external fuse holder, I probably
have to open up the thing. In the mean time: no APRS, no BEACONet. I will
look at it when I get back, in the weekend of Oct 29.

Hope to see you soon, I am looking forward to see any reports forwarded to

the list.

Hi Jeff,

Program is working fine - just nothing to report at this time. Maybe things
will swing around today. I've got it running in the auto mode using tips
from you and Ramon to send the report, exit at 2359Z then do a restart at
0001Z. Looking for a LONG list today!!

Bob - KC5DUI - EM26WE

MY Astron RS-20S (has a speaker in it) had a fuse holder on the
back panel. I replaced it with a circuit breaker from an F-4...<G>

Hi all,
sorry to be rooky, but if everything goes well will be able to be 24/7/365
operational on 28.131 PSK31 before end of September.
By the way, since some days, I can receive in the evening (local time)N2VRJ
and W1/PA3EUG in pretty good conditions.

Hi Jean-philippe!
Welcome to BEACONet! It will be great to have europe represented on the
map. We are happy to help, if you have any problems at all. I am
looking forward to seeing you on my map.

I've been off the air since last Friday (due to an experiment that I was
running on 2-meter BEACONet), but will be returning to BEACONet^31 on
28.131 in another day or two.

See you soon!
Best Wishes,
Ev, W2EV

Hi all

I don, t think I can use Snapshot reader with AOL. Does anyone know of any
place that offers free E-mail with a dial up connection that would also be
free?

Rich

Check with the AOL help geeks. You should be able to send to AOL via SMTP. About a year ago I had a college class with one of those geeks from the AOL service center here in Tucson and he told me thne that there was a way to send via SMTP with AOL.

73 Jeff

PS if this become problematic, the I will look at trying to force it to a MIME type email client.

If you saw the prop report I just sent out you should notice that I have now have the software working using MAPI complainant email clients. This will be especially of interest to those who are using Microscrew Exploder with Outback Express, NervousScape, Americas Only Lie (AOL), and everyone favorite Winblows NT. If you have been having difficulty using SMTP to send out the reports, this may be the answer.

Version 1.4 will be available on the website before sunup on the east coast.
http://home.earthlink.net/~n7yg/uimailer.htm

I am still working on a method for those who are using web base email systems like Hot Mail and Yahoo. I need a little input on this one. I am looking at a cut and paste, but this will require operator intervention. Anyone know of a way to automatically log into the web based account and create a message with some sort of script??

Yes, but the mapi does work. Unfortunately, I also have to be connected to
my company VPN, as that's where my Exchange server is...but a small price

to pay to get it to work.

Doug

I am looking into this as we speak, Not sure what has to be done to over ride this. Guess I will have to search the archives of Microsoft to get an answer.

Jeff

Boy I sure like it when problems are solved with just the click of the
mouse.

To get rid of the annoying box that ask everytime you try to send a MAPI
message outside of your email client, try the following. This works with
Outlook Express and I suspect Outlook as well.

Pull down the Tools menu item and select options. Find the Security tab and
uncheck the item that say something about warning when another application
tries to send mail. This of course may circumvent any protection against
rouge programs using the email client.

Those using other email clients may try to find something similar in their
client and post the fix here.

A new, programmed feature and been found. In the callsign filter box, you must type the callsign in uppercase for the filter to work correctly. Not sure when this little bug un=programmed itself, but it will be fixed in the next revision. I will also be looking at re-formatting the date and time to UTC. Before I do that, does everyone have their computer clock running on local time?

Hi Jeff,

Currently have my machine running on UTC time. Made it easier to keep in touch with UIView display. If you're going to have a time feature (UTC Offset) can we tell it we're using UTC as the system time?

Bob - KC5DUI - EM26WE

Sorry about the truncation of the lines in my just sent
09-22-01 report.   I need to do some adjustment of my
browser to keep the data properly organized.

Bottom line, however, is that the eastern
and southern U.S.stations that I can hear
were very strong for most of the day.

73,

W3NRG

I agree. It can be quite confusing to newbies otherwise. It's quite
another thing to take the time to analyze everything that is on your own
screen, of course. I like the cleaned up list...and I like Jeff's
"first" and "last" heard addition, too (for those piloting his plug-in).

I've been working on a consolidated (less consuming of spectrum) plan to
house all of the world's unattended BEACONet^31 transmitters (for the
future-vision that we have of having the world blanketed by BEACONet
signal sources).

First...this is a plan...no one is asking anyone around the world to QSY
at this point.

What we've learned is that everyone has attempted to tune to 28.131 MHz
+ 1500-hz audio. What we get is folks spread +/- 50 hz from there
(which is actually *good*). This tells met that we simply need to
establish a single "tune to" frequency for each continent and let normal
variations between equipment let the actual signal fall where it may
(rather than trying to chanelize in 62hz steps within a range).

Here are the thoughts:

Continent	Tune-to
One	+ 800 hz
Two	+ 900 hz
Three	+1000 hz
Four	+1100 hz
Five	+1200 hz
Six	+1300 hz
Seven	+1400 hz
Random/General	+1500 hz

This would mean that signals would be effectively spread anywhere from
+750 hz to +1550 hz (a pass band of 800 hz). The above is an
illustrative generalization.

The question is: can PSK31srv scan this range effectively? The question
is multifaceted. Has anyone attempted to "open up" the scanning range
to see what would happen?

Rendered body type: text/plain

Hi, Ev,

I have experimented with the scanning range.

The one question we need to answer if we
open it up as wide as you are suggesting is
how many "DX" calls will be missed because the
software is busy looking at noise at one
end of the range whilst the beacon is on and
off at the other.

>From this end, I see "half copied" calls at
certain times already due to the receiver
being diverted away from the signal until
half of the transmission is over. Of course,
if the propagation window is open long
enough, the probabilities are that the
signal is recorded in full later but.....

I am looking into a way to cleanup the list from some of the 'invalid'
callsigns that result from poor copy or just plain noise and interference.
One method I was looking at was to check the callsign against one of the
callbook CD-ROMs. I have the 'Flying Horse' version and it appear to have a
very good inclusion of international callsigns. But, as the CD gets older,
the validity of the info on the CD becomes questionable - considering how we
in the US change callsign.

I was also looking at checking the callsign against an online database such
as QRZ or Buckmaster, but then again this could be problematic. We must
rely on a good connection to the internet. Sending each request could cause
the program to slow down considerably.

Another possibility is to progressively create a database of valid callsign
on each users machine. Each days catch will be compared against the users
database, those not found in the database will be flagged and checked at a
later time against the users callbook CD-ROM and one of the online service.
Those found unverifiable, will be discarded as invalid.

I have added some primitive 'regular expression' checking, and although it
has eliminated the obvious hash and junk, the only positive way to check a
callsign is against a known source.

As I have all but trashed my phone modems for a high speed connection, I may
forget about what it was like in the days of 56K (ugh!). So I really need
input from those who are still using dialup services.

Well described. This is exactly what we need to determine. I should be
back on BEACONet^31 by the end of the day today and will play a bit to
see what happens.

With all of the great propagation...maybe we simply turn-on the CRC?

Turning on the CRC is a great idea. I have my station back on the air this afternoon and I have reenabled the CRC. Lets see what happens.

Jeff

Pretty exciting weekend ... worked several European stations on PSK31 after seeing F8BNN appear this morning and yesterday morning. 10 meters from 28.1195 up had enough signals to fill my Digipan screen for hours at a time.

Isn't it interesting how we seem to be transitioning to a more East-West
propagation at the equinox?  Not much heard from Argentina lately...nor
quite as much from northern tier states.

Likewise, yesterday I caught N7YG and N3NRG from my location in NY, but
no one else.  Why no K7IP or F8BBN for me?  Maybes because the A-Index
is 20 (probably some aurora north of 45-degrees latitude, absorbing
those paths for me).

Fascinating, no? :o)
Ev, W2EV

We didn't see any aurora up here last night (47 N), although some sources
suggested that we might. PSK is dead as a doornail right now, though, and
I usually have the 5's in here by now. Gonna be a quiet day on 10m I'll wager.

Ev,

I think *even* if you set this to KM, Jeff's tool will still put a "miles"
header above the text. Please check if the DISTANCE is in KM, even if the
header says miles

When you turn on CRC, please keep your line lenght TO A MINIMUM !! Make your
PSK31Srv header text longer, and don't put your locator there......

No kidding? That's interesting. Opportunity for a fix, I hope. :o) It could get confusing.

I'm glad to see a few more stations on ^31 mode. I was especially pleased to copy our friend from France Sunday. It looks like we're really starting to take off.

During the next couple of days I'll be putzing around with the software and system here in an attempt to force a sort of digipeat. I don't know if it'll work (probably won't), but I hate to waste my curiosity. So far I have managed to get the PSK date that UI-View receives echoed out to what it thinks are unused ports. If I can figure out how to route that data back into UI-View (I'm attempting to set up a local aprs server to handle it), then maybe it'll repeat what I'm hearing.

Then again, it might just fry the ports...

I'll let y'all know how it goes. If anyone starts seeing some really strange things from my station, try and make a note of it.

****

Ev, you mentioned something the other day about turning on CRC checking to try and clean up the contact lists. I don't recall seeing that anywhere in UI-View. Where is that option? I'm definitely going to need crc checking if I ever get this thing to repeat psk data.

Karl, N3APZ

Excellent point, Ramon. The longer the TX frame, the more opportunity
for introducing errors that will keep the frame from passing the CRC.
If using CRC, it is best to have a long preamble (to get a good lock)
and a short-but-sweet TX frame with CRC at the end...and repeated more
often.

example (open to quite a bit of variation):
Preamble = HTTP://GO.TO/BEACONET
TX Frame = W2EV>HY0G03:[FN03XD]^CRC
Internet Beacon Interval = 2.43 Minutes

This *may* be "as good" as a single longer TX w/o a CRC...but with the
advantage that it won't clutter your screen with partial receptions, all
from the same grid. :o)

This is not fact...it is conjecture. I'm going to give it a go
tomorrow. A half-length TX frame with a CRC at the end that I will TX
twice as often. Interesting concept.

Neat idea, Karl. Good luck, and keep us informed!

As for CRC, there are two check-boxes in PSK31srv's setup screen. Open
it and you'll see it (I don't have it on the computer I'm using...so I
can't cite it specifically). One check-box will include the CRC in your
transmission and the other will force PSK31srv to check for a proper CRC
before it passes the received information on to UI-View.

342. [propnet] Late Monday Afternoon

From: esack <esack@pacbell.net>
Date: Tue, 25 Sep 2001 02:05:42 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-38347-2001.09.25-04.27.01--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi, Ev,

I noted in my early afternoon report on Monday the 24th
that there were signs that the band was starting to open
up as seen here from the south west corner of the
U.S.   When I looked at the screen at about 5:00 P.M.
Pacific Daylight Savings time there were
several "for the first time" stations showing
here INCLUDING W2EV!

Unfortunately, the UI-VIEW application cleared the
Station file before I got a chance to copy it at this late
night hour (I have to go in and figure out how to
increase the UI-VIEW Station report file retention time)
so I cannot send it with this report.

However it was very interesting to see the propagation paths
very rapidly expand late in the afternoon.

I wonder if the "flare" activity report we saw
earlier on might have had some influence there??

73,

Ed

343. [propnet] Scan Range Experiments

From: esack <esack@pacbell.net>
Date: Tue, 25 Sep 2001 02:27:42 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-38348-2001.09.25-04.48.44--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi, Ev,

Following up on your thought about placing
different areas on different warble frequencies,
I took a look at signal captures here using scan ranges
of 50, 100, 150 and 200 with the delays set
at "2". (Typically, the range of warble
frequencies as we see them here is about

+/- 75 cycles around 1500 cps.)

I found that in some cases, at the
higher settings, a BEACONet signal could
come and go before the application got
around to looking at the warble frequency
the particular station was using.

I should repeat the experiment with the delays
set at other values, of course and of course
this location experiences a different mix of
QRM than would be experienced by
others, as the degree of "pause and look"
is influenced by said QRM.

It may not be practical but if the "preamble"
period were adjusted to be longer, that
would increase the chance that the scanner
would come upon and lock on to a BEACONet
signal before the information began to
flow.

And, of course, if the propagation path
hangs in for several transmission periods
the issue may become mute in any event.

Have others done more conclusive
experiments here??

73,

Ed

Hi Ed,
In order to lengthen the time, you simply hit UI-View's "Setup | Misc."
menu and change the Expire Time. 1440 minutes=24 hours. I use that
setting so that I can check once a day and see how the band did. Of
course, I actually check more often than that...but that's how I set
mine. :o)

As for propagation paths lengthening with the afternoon...the flare may
have something to do with it...but it may be simply that I just figured
out why I wasn't transmitting any RF until about the time I showed up on
your screen. :o))

I have an FT-920 with a tempermental antenna tuner. The latest QST
lists a couple of fixes that I'm now thinking about applying. The ^31
world is now good again. :o)

Hi Ed
I started playing around yesterday myself. I set both delays to 2 and went
into PSK31svr ini and set step range from 50 Hz to 100 Hz. Myscan range is
set to 200 Hz. Going to leave it like that for a while and see what happens.
It looked good last night before I shut down do to the threat of Thunder
Storms.

347. [propnet] DATArchive Server Thoughts...

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Tue, 25 Sep 2001 06:58:23 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-38355-2001.09.25-06.24.57--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I'm about to propose something for which I have no skill to develop
myself, but with the idea that someone on the list may have what it
takes to pull this off. Read on...

Imagine that all HY-BEACONet^31 participants set their Expire Time to
60-minutes and used Jeff's SMTP Snapshot Reader program to auto-eMail a
snapshot to a central DATArchive server...once every hour.

DATArchive (the thing that doesn't exist yet) would accept the eMail and
parse out the following:
o Originating Station Callsign, Location, Date Active, Time Active
o The following information from their "heard list":
  - Callsign, Grid Square, Date, First Heard (time), Last Heard (time)

Web surfers would hit the DATArchive web page and be presented with a
map. Icons on the map would correspond to stations that had *submitted*
Snapshots.

Clicking on an icon, another window would pop-up, displaying a map with
only the originating station on it and a <play> button. By pressing
<play>, one would be presented with a 24-hour "animated" recap of what
that station received (with UTC time displayed in a corner) with icons
coming and going as the band opened and closed for that station.

As the database grew...it might even be possible to do other things,
such as a "weeks worth" of catches on one screen, displaying it over 52
iterations...we could literally see any seasonal variations in
propagation -- as observed by that station -- right before our eyes!

Jeff's Snapshot Sender made this vision possible...but it's only a
vision. This is one of the times that I wish I had the skills to
develop something like this myself...but I don't. :-(

Just dreaming for now.

Hi all, and thanks for all your encouragements, I'm very eager to be on the
air and blowing in your direction (vertical or 4 elemts, I will see..)
I think my 24/7/365 Beanconet31 station will be up and running in the
coming days as promised.
So, for the moment I gave some support to Marc F8BNN who is my close
neightboor 15 miles south, last week-end.
Finally here follows a poor "manual" report of is being received now
(around 17 UTC) in NE France.
WD4RBX with "strong" signal on my wire and W2EV (first time for me); still
N2VRJ is on my map; this station seems to have the most reliable signal
since some days.

73 to all of you on th "other side of the river"

I was just wondering if there were any programs, (that are simple
to use) that decode two signals at the same time? If there is
couldn't we use it to watch a larger area all at once? Or is it
possible to have psk31Srv running twice, set up to watch
different ranges. For instance one at 800 -1200 and one at 1200-
1600.
Sorry if I sound like I fool, I really have no experience in the
world of computers. Just kickin around some ideas. :)

Hi Jesse

Check out WinWarbler

WinWarbler allows you to conduct QSOs using the <A HREF="http://aintel.bi.ehu.es/psk31.html">PSK31 mode</A> developed by Peter
Martinez, G3PLX. To aid PSK31 DXers and contesters, WinWarbler can simultaneously decode and display PSK transmissions on three separate frequencies. A PC running Windows 95, 98, 2000, or NT with an SVGA or better display is required; for acceptable performance, a 75 mHz CPU and 32 mb of RAM are typically adequate. WinWarbler is free, and contains no advertising. Commercial use is expressly forbidden.

 Go and have a look ! It worth the time.

http://www.qsl.net/winwarbler/

A s t r o A l e r t
Sun-Earth Alert

Solar Terrestrial Dispatch
http://www.spacew.com

25 September 2001

1. POTENTIAL SIGNIFICANT AURORAL STORM WARNING.
2. WHITE LIGHT FLARE NOTIFICATION.
3. POTENTIAL SATELLITE ANOMALY WARNING.
4. COPY OF THE MIDDLE LATITUDE AURORAL ACTIVITY WARNING.

1. POTENTIAL SIGNIFICANT AURORAL STORM WARNING

A significant major class X2.6 solar flare was observed from a sunspot complex identified by NOAA as sunspot complex number 9632. This solar flare was associated with a strong Earthward directed coronal mass ejection. It is expected to impact the Earth late in the UTC day of 25 September (anytime near 18:00 UTC on 25 September or 2 pm EDT on 25 September). The impact of this disturbance could produce periods of major auroral storm activity ("northern lights") that may become visible from many middle and low latitude regions. In response to this potential activity, a Middle Latitude Auroral Activity Warning has been issued together with a Low Latitude Auroral Activity Watch for the days of 25 and 26 September. A copy of the middle latitude warning announcement has been included below (see item 4).

2. Todays major X2.6 solar x-ray flare was reportedly observed in

white-light by Jure Zakrajsek of Slovenia. Additional white-light flares are possible in this region. See: http://www.spacew.com/aurora/mdi_sunspots.jpg

3. A strong category S3 (rated from S1 to S5) solar radiation storm was observed following the eruption of todays strong solar flare. Energetic protons travelling at near relativistic speeds (near the speed of light) have produced heavy ionospheric absorption of high frequency radio signals through the polar ionospheric regions. Spacecraft in geosynchronous orbits may experience increased incidences of SEU's (single event upsets), which are caused when an energetic proton impacts a spacecraft and releases some of its energy in semiconductors components on the spacecraft. SEU's can result in "phantom commands" on spacecraft that may (or may not) require operator intervention to correct. Strong proton events such as this can also permanently degrade the performance of solar arrays on spacecraft. In situations where spacecraft power levels are already low, energetic proton events can force spacecraft operators to shut down instruments in order to preserve power. Atmospheric drag on lower orbiting spacecraft is also expected to increase following the arrival of the coronal mass ejection and the ensuing geomagnetic storm. Spacecraft with cameras are already observing the effects of the heightened proton activity in the form of increased cosmic ray noise produced as protons impact spacecraft imaging sensors and trace out streaks of light. These conditions can confuse star tracking systems used to maintain accurate spacecraft orientations.

4.

/\

MIDDLE LATITUDE AURORAL ACTIVITY WARNING

ISSUED: 04:20 UTC, 25 SEPTEMBER 2001

/\

*** POTENTIAL FOR HIGH ACTIVITY EXISTS ***

VALID BEGINNING AT: 15:00 UTC 25 SEPTEMBER
VALID UNTIL: 19:00 UTC ON 28 SEPTEMBER

HIGH RISK PERIOD: 25 - 26 SEPTEMBER (UTC DAYS)
MODERATE RISK PERIOD: 25 - 28 SEPTEMBER

PREDICTED ACTIVITY INDICES: 30, 100, 40, 12 (25 - 28 SEPTEMBER)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: HIGH

POTENTIAL DURATION OF THIS ACTIVITY: MAIN BELT = 24 TO 36 HOURS
MINOR BELT = 36 TO 48 HOURS

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR AND AFTER LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: MODERATE, BECOMING NIL AFTER MOONSET NR MIDNIGHT

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: GOOD TO VERY GOOD

AURORAL ACTIVITY *MAY* BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

CENTRAL/SOUTHERN CALIFORNIA TO ARIZONA TO NEW MEXICO TO TEXAS TO LOUISIANA TO MISSISSIPPI TO ALABAMA TO GEORGIA AND POSSIBLY NORTHERN REGIONS OF FLORIDA TO SOUTH CAROLINA.

ACTIVITY *MAY* ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

EXTREME NORTHERN MOROCCO TO EXTREME NORTHERN ALGERIA TO NORTHERN TUNISIA TO SOUTHERN ITALY TO GREECE TO EXTREME NORTHERN TURKEY TO GEORGIA TO NORTHERN AZERBAIJAN TO SOUTHWESTERN KAZAKSTAN TO NORTHERN UZBEKISTAN TO CENTRAL KAZAKSTAN TO EAST-CENTRAL KAZAKSTAN TO EXTREME NORTHERN MONGOLIA TO EXTREME NORTHEASTERN CHINA TO CENTRAL SAKHALIN. THERE IS A SMALL POSSIBILITY EXTREME NORTHERN JAPAN MAY WITNESS ACTIVITY.

IN AUSTRALIA, ACTIVITY *MAY* BE OBSERVED APPROXIMATELY *SOUTH* OF A LIHE FROM NORTHERN NEW SOUTH WALES TO NORTHERN SOUTH AUSTRALIA TO CENTRAL WESTERN AUSTRALIA.

ALL OF NEW ZEALAND HAS MAY OBSERVE ACTIVITY.

IN SOUTH AFRICA, THE EXTREME SOUTHERN TIP OF SOUTH AFRICA (NEAR CAPE TOWN AND PORT ELIZABETH) *MAY* OBSERVE SOME ACTIVITY DURING THE HEIGHT OF THE

STORM, IF PREDICTIONS HOLD TRUE.

IN SOUTH AMERICA, SOUTHERN REGIONS OF CHILE AND ARGENTINA *MAY* SPOT
PERIODS OF ACTIVITY SOUTH OF A LINE OF ROUGHLY 50 DEGREES SOUTH LATITUDE.
THE FALKLAND ISLANDS MAY ALSO SPOT PERIODS OF ACTIVITY.

SYNOPSIS...

A strong solar flare and high velocity Earthward directed coronal mass ejection were observed at 10:38 UTC (6:38 am EDT) on 24 September. The coronal mass ejection is expected to impact the Earth near 18:00 UTC (2 pm EDT) on 25 September, give or take several hours.

The arrival of this disturbance is expected to produce periods of major to severe geomagnetic and auroral storm activity. This disturbance has the potential to be one of the largest observed this solar cycle. Observations well into the low latitude regions may be possible if predictions hold true.

Observations will be best after local midnight in the northern hemisphere when the moon sets (or after about 3 am in Australia/New Zealand).

Forecasters suggest this disturbance has the potential to last as long as perhaps 48 hours. As a result, most middle latitude regions of the world should have at least one chance to observe activity. Whether this holds true remains to be seen. Forecasts of storm durations are an inexact science.

This warning will remain in effect until 19:00 UTC on 28 September. It will then be updated or allowed to expire.

PLEASE REPORT OBSERVATIONS OF AURORAL ACTIVITY TO:

Thanks for the report, Ben! I haven't seen your icon yet...but then again, that may be related to the scan-width that I'm using...400 hz. So far 'rbx, 'yg, 'nrg, 'bnn today, though.

This is just a partial for the day. I have been experimenting
with collection times and don't have it the way I want it yet.
Also, I don't now about others but I was experiencing a lot
of flutter which created an awful lot of corrupted station
recordings.

I know we like to edit out corrupted signals before sending
out our reports but there were two in this list (APRS?) that seem
worth including since one wonders where they came from.

Rendered body type: text/plain

FWIW...

I run a little packet counter web page here in the Pacific
 Northwest.

  http://www.jnos.org/nwprs_usage.html

Today I was adding a tweak to separate out the
30 meter packets and noticed how easy it would be to create
a separate page for 30 meter only packets.

  http://www.jnos.org/nwprs_usage30.html

A couple more tweaks such as range, bearing and time first-heard,
and this will be close to useful.

Looks like I better get those 10 and 6 meter systems running...

73,
Bill - WA7NWP

I'm about ready to put together everything I dug up and
submit it to the local Western Washington repeater coordination
committee. Now that I found out the Canadian repeater on 53.53
is "probably" not on the air and I'd guess has been "proposed"
for 2 years, it'll be interesting to see what they say.

After that, I might order the crystals for the MFJ data
radio and start making some noise there.

Anybody else in the Pacific Area (Hi Doug) that's interested
in making some packets on 6?

Bill, WA7NWP

Hi folks,

This is our Packet counter we use to keep track of folks sending
off too many packets.   It's a PERL script running on a Linux
box. The script connects up to an APRSD Igate. To get the
10 MHz display, I added a single line of code to select only
these packets, and changed the title.   The source will be
available under GPL real soon now.

Rendered body type: text/plain

As I am sure all participants in BEACONet do,
I have spent more time than I care to tabulate
staring at the PSK31 waterfall screen trying to
develop an intuitive feeling for the
trade offs between scan range,
scan steps, delay 1, delay 2 and squelch
settings with the objective of reducing the
number of "damaged" station reports that
get logged.

To put it in perspective, PSK31 is a
great benefit to me in this location since
I sit in a virtual "sea" of QRM that starts
below 500kh and populates the HF
bands. To put it simply, without PSK31,
I don't stand a chance of normal ham
reception at frequencies below VHF.

What I see is that the PSK31 program
gets busy "thinking about" a noise "signal"
during the time a good BEACONet
transmission starts and does not jump
to the real signal transmission (audio)
frequency until the information transmission is well
under way. This, in turn, leads to
"damaged" station reports.

It would seem to me that if the "no data"
preamble were longer the chances for
the program to lock on to a real signal
transmission before the data is sent
would increase.

Am I off base and/or could someone
explain the reasoning behind the
selection of the current "pre data
transmission preamble time?" My
sense is that doubling it would very
much reduced the incidence of
"damaged" reports.

Hi Jesse (and group),
Your question was an easy one to ask...but a more complicated one to
answer. I think the technology (software) to decode multiple PSK31
streams at the same time exists (Winwarbler, etc)...but they are usable
only for PSK31; that is to say that they won't interface (send what

they hear to UI-View nor translate UI-View's transmissions to PSK31)
with UI-View.

In order to do so, the author of that software would have to build an
interface to UI-View, just as Roger's PSK31srv does. To date, Roger is
the only person to have created software that both decodes/transmits
PSK31 formatted information, but also interfaces with UI-View. Even
then, Roger has since abandoned support for this product, so we keep the
fire burning ourselves.

His interests are now elsewhere...even so we are endebted to him for the
product that he released to us -- it has made the success of BEACONet^31
possible.

A follow-up message on a related topic to follow...

366. [propnet] A Peek into the Future

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Wed, 26 Sep 2001 06:53:54 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-38624-2001.09.26-06.20.27--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

We've recently discussed two seemingly different, but actually quite
related, issues -- both dealing with wider search band-width within the
PSK31 audio pass band:

o Implementing a plan in which different continents are assigned a
  unique PSK31 audio-frequency "anchor" (each separated by 100hz),
  allowing the natural inaccuracy of amateur transceivers to
  spread-out that continent's participants around that "anchor"
  frequency.

o Moving to establish a VHF-based BEACONet^31 frequency, wherein
  there is a "problem" of frequency stability by virtue of absolute
  error in frequency generation (a 1 part per million frequency
  inaccuracy at 10-meters isn't "much", but at 144-MHz it is
  significant). There is interest in Europe in establishing a
  TransAtlantic 2-meter BEACONet^31 system (suggested frequency at
  this time of 144.288-MHz, by the way), as a result of the Brenden
  Trophy competition. Wouldn't it be cool to convince KH6IAA to do
  something similar in the Pacific? :o) Without being able to hear
  the other side of the Atlantic to "tune-up" properly, we would
  need to have a wider reliable scan-range. Of course, at VHF this
  may not be as big of a deal, given the lower atmospheric noise
  and subsequent lower number of "false locks" that would consume
  PSK31srv's scanning time.

Two ways of dealing with this come to mind (there may be more...and if
someone can suggest more, I'd be interested):
1. Finding a PSK31 program that *already* allows for multi-channel
   receive and try to convince the author to build-in a scanning
   algorithm and an interface to UI-View.

2. Nudge <smile> Roger (the author of PSK31srv) to regain interest
   in the product and see if he thinks it is possible to explore
   enhanced logic in the PSK31srv system that could identify
   PSK31 streams more quickly and lock on them (ie: we can identify
   them fairly quickly by sight...could a different algorithm be
   employed so that PSK31srv could, too?).

Of the two...we are probably better finding an author of a PSK31
program, and attempting to convince them to add hooks to UI-View...as
they already have a basic love of PSK31. This would simply expand on
that.

Roger's plenty busy these days with lots of other projects. He dropped
support for PSK31srv so that he could concentrate on them. I wouldn't
blame him for not wanting to pickup the torch on this.

One more eMail on this topic...then off to work. :o) Stand by.

367. [propnet] Searching for the Right Product

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Wed, 26 Sep 2001 07:01:32 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-38625-2001.09.26-06.28.05--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

If one agrees that the best route to take is to find an existing, well supported PSK31 transceiving product and attempt to convince its author to build-in BEACONet-specific features (scanning and a "hook" to UI-View), then we need to identify the most likely candidates.

I don't personally have a lot of knowledge in the PSK31 world...are there software titles that come to mind that already come close to what we would need?

I think the following would be good traits:
o Multi-channel simultaneous decoding
o Passband scanning on each of those channels
o Web-interface of some sort (this is what the UI-View "hook" is based on)
o Multi-channel receive/transmit (the SoundCard interface is stereo, the ability to feed two different radios [one on each stereo channel] would be a real plus I'd think)

Any other "personality traits" to consider before (or *if*) we start the search?

Or (and an even bigger question) is there a need to search? Maybe PSK31 can do what we want (lock-on faster, even in a wider search-band) and we simply haven't stumbled across the best way to invoke that feature yet.

Thoughts appreciated.

I am still on...as is AA2AC (50 miles to the west of me). Bruce just dropped me a note to say that he's shutting down for the winter but will be back in the spring.

I will be going on the roof to winterize things this weekend (if the rain ever stops), so I'll be off for a while, too.

Ed,
You are right on the money (at least that is the consensus at this point)...the idea would be to double the preamble and keep the actual useful payload succinct with CRC included.

Did we ever determine if it would be possible to use the preamble to transmit an "idling" signal...so as to have the ability to get a meaningful IMD reading, while we're at it?

My $0.02....

Wouldn't the best route be to find open source DSP routines and then custom tailor the target product around them?

My underlying motive for this proposal is to throw off the yoke of platform dependence. There is no reason for a well designed PSK31 signal processing core to be platform dependent. It is the codec and the user interface that force the product to conform to specific hardware and OS.

I imagine that a well written, portable PSK31 processing core must be available somewhere. It would be great to have such a library around which custom tools could be forged.

This is a good point to bring up what I consider to be a bit
of a philosophical difference between the existing PropNet
system and my person beliefs.

I believe it's expensive in time, equipment, antennas, and
electricity to have a dedicated beacon station.  Specially
on some frequency like 53.53 where there will be openings
in the area of hours per year.

On the other hand, if the frequency is actively used for
other activity - like an alternate APRS feed, DxCluster or
even (gasp) BBS access - the PropNet goals can still be obtained.

Instead of normal 10, 15 or 30 minute beacons - the system would
transmit at a much more aggressive rate.  Maybe every one or two
minutes.  Other activity would take up some of the time between
beacons - but not so much as to defeat the purpose of listening
for openings.   The other activity would "pay the rent" so to
speak on keeping the PropNet station running.

73,
Bill - WA7NWP

I'll be setting up soon for 24/7 operation here in EN82HL on 53.530 AX.25
with my Icom 706.  I believe the only thing expensive about a beacon is
having the equipment and not using it as much as possible.

Rich

Rendered body type: text/plain

Version 1.5 is now available at the web site
Http://home.earthlink.net/~n7yg/uimailer.htm

This is a cosmetic update. I have fixed the miles/Km in the header. I also eliminated any problems with callsign filtering due to upper case/ lower case translation. I have now enabled the UTC time conversion so be sure to set the correct conversion factor in the drop down box and save that to your configuration. If you are 4 hours behind UTC, then your conversion is -4. IF your computer is running on UTC then use zero.

Rendered body type: text/plain

Right off the bat I can think of another feature that might be useful, the
ability to see paths between stations.

I tried getting two copies of UIV to talk to each other and was only
moderately successful. I can "gate" the received info from one to a com
port and have it picked up by a second copy. The second copy can "gate" it
back to the other com port or to a tcp port. However the first UIV doesn't
pick up the data and route it back to PSKsrv. It will spit the data back to
the second UIV, creating a very interesting loop to try and break. Let it
run too long and the computer gets too busy to accept mouse or keyboard
functions (save calling up taskmanager and killing the program).

My next attempt, sometime after I get my calcII test prep done (going to
school at 41 isn't exactly easy), will be to network two computers and try
to use UIV that way.

Failing that, we'd need someone to create a program to trap the data and
spit it back out to PSKsrv, making suitable callsign substitutions of
course. I've never tried writing something to access logical ports. If
someone could tell me where to get info or a tutorial to do it in C, I'd be
willing to give it a try (class and work schedules permitting).

After that, I don't think it'd be too great a leap to run multiple instances
of PSK (each with their own scanning range) and gate them to different tcp
ports as long as the trapping program could spit the data back out on a
single port that UIV would see.

Karl, N3APZ

Disregard this prop report. It is only me refining the software a bit and
again I forgot to change the mail to address so It only would come to me.

Jeff

Rendered body type: text/plain

This may be "old news" to the network but
the RF Limited, Magnum 257DX appears
(from the catalog pictures anyway) to
be identical to the HTX-10.   It is, of course,
more pricey than the last quoted Radio Shack
price but it may be more available as time
goes on.

The Magnum 357DX adds a linear amplifier
to the package and might well be an option
for those who want a little more "oomph."

Both units are shown on page 29 of the
Summer 2001 HRO catalog.

I have no financial interest in the companies;
just putting a note in the file, so to speak.

73,

Ed

392. [propnet] UiMailer V1.6

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Thu, 27 Sep 2001 10:16:04 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-38914-2001.09.27-12.41.08--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I had a couple of request to allow sending of the mail message to a text
file and the clipboard. In order to accomplish this I had to rearrange the
GUI a bit. Version 1.6 is now on the web site
http://home.earthlink.net/~n7yg/uimailer.htm

The big change is you can now see the mail message as it is created. I also
added the ability to store the position of the window so when the program is
run the next time, the window appears in the same place.

It might be helpful if we put the frequency in our reports.  The
configuration code is helpful, but I can only assume that reports like the
following are on 10 meters.

404. [propnet] Interesting discussion

From: Earl Needham <needhame@yucca.net>
Date: Thu, 27 Sep 2001 19:40:59 -0600
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-38997-2001.09.27-21.07.18--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

The is currently a VERY interesting discussion going on over on the
APRSSIG, a discussion which has the potential for destroying the BeaconNet
concept.

        How? Certain folks are trying to say that a control operator must be
physically present at an APRS station. That requirement would certainly
curtail a lot of MY stations activity...

        7 3

Hi Ev,

If I've put it in correctly - hy0e01 - running 25-30 watts to a N-S dipole
high up at 15Ft. Had some copy on Marc again today. Really like the UIMail
program - am going to set it up to send my report around 1700Z so I can
check while at work and then again at 2355Z to close out the day.

Bob - KC5DUI - EM26WE

The goofy looking times are another one of those 'features' that creeps into ones software routines. Seems I had a misplaced colon (:) when I ran the time through the formatter. I believe I fixed that in Version 1.6

Jeff

Bill, I would beg to differ, ESPECIALLY in the case of 6m. First I would cite the fact that the operational network is, at present, grossly underpopulated. Who's to say that if the map were as dotted with 6m hub nodes like we'd all like to have it, just how often some propagation enhancement would be taxing the channel's information capacity in some corner of the network.

That said, if we hold out hope that someday the network will be populated to the point that there's a lot of BEACONet traffic moving on the channel, 53.530 must be considered a national treasure. I say this based on just how clear a channel it is, coast to coast. That it has already been coordinated in several regions also makes a real gem.

Now, contrast 53.530 to the 2m frequency of 147.585. Up there in the Pacific Northwest, you already have a problem in that 147.585 does not conform to the local standard of 20 kHz channel spacing (in opposition to the old standard of 30 kHz spacing with 15 kHz splinters used elsewhere, where 147.585 is indeed a standard simplex channel.) The 20 kHz spacing was pioneered in Washington and Oregon in the late 70's and was later adopted in other parts (maybe all) of 7-land: one big piece of geography. Once during the Perseids I happen to be out in Oregon retreiving some kids. The equipment at our disposal really wasn't adequate for meteor mode, but we decided to put it on anyway. We ran a beacon one night under my daughter's call. As soon as we got home, she had an e-mail from a guy who, not knowing what BEACONet was all about, wrote to advise her that she had a runaway packet station making racket on the local (actually he was some 50 miles away) spotting net frequency (voice) of 147.58. On the east coast, the propagation enhancements I've seen on 147.585 came, not from BEACONet stations but from a PacketCluster in the Carolinas via tropo. And a cluster node with a lot of users connected can really monopolize the channel. Yet, with all these inconveniences, finding a better place to set up shop on 2m is no trivial task.

All this said, I would vote for keeping 53.530 solely dedicated to the BEACONet cause and push for the day when the 6m network has grown to the point that it's giving 53.530 a real workout.

73, Scott   K7LU

You need activity to grow activity. With 3 or 4 stations
nationwide there isn't anything to grow. 50 DXclusters would
put a few packets on there and we might see something. It'll
be years, if ever, until it gets anywhere near busy enough
to be considered remotely busy.

I KNOW what it's like watching for DX packets on 6 meters. I
did it in 1991. And I captured some. After monitoring the
"then" national packet calling frequency of 51.7 MHz all winter
and spring I finally picked up a couple packets on each of a
couple evenings. That was from some BBS's doing forwarding in
the Reno Nevada area. (I was in Fort Collins Colorado.) Believe
me it's a long slow boring unrewarding job.

One of the few 6 meter stations has already mentioned shutting
down until spring..

Running another system on the frequency "pays the rent" for the
equipment, keeps it interesting, and keeps packets flowing.
Can anybody show us the 6 meter packets recorded in 2001?

Besides with only 3 stations on nationally - what chance to we have
in getting the frequency assigned from the local coordinating

councils. Heck - even the existing 6 meter repeaters have
5 or 6 users (for ALL the repeaters. <g>)

Lets make lots of packets - and lets get double the use out
of them. A position packet, or an AX25 connected mode ACK
have the same propagation value...

Rendered body type: text/plain

It's important to remember that BEACONet is many things, not "just" a
propagetion tracking system. It is:
o a propagation tracking system (duh! <smile>)
o a VHF contest rover tracking system
  - because of our choice of software (UI-View) rovers can actually
    use the BEACONet frequency with a high degree of assurance that
    their transmissions will fully comply with the ARRL's VHF contest
    rules (more on this at the website, by the way)
o a meteor scatter communication explorer
o a method of communicating through the ISS and other "orbiters"
  - though new methods are being developed to assure a higher level
    of compatibility with other users of those same systems

Of the items listed above, only the last doesn't take place on 53.530
MHz.

Two bulleted items are sporadic by nature (yet, they are real occupants
of the frequency): rover tracking and meteor mode. Both of these rely
heavily on the structural philosophy of the BEACONet network to be in
place in order to realize success. We can discuss that more, if there
is an interst in doing so.

Imagine meteor mode participants attempting to get through the traffic
of a well-utilized (by APRS standards...which are not the same as ours,
by the way) frequency. :o)

This actually happened by mistake during the 1999 Leonids, when I forgot
to add one-simple parameter to the instructions for using WinAPRS --
FULLDUP ON. :o) What we learned was that stations in high polulation
areas saw no success of note (the frequency was full of local signals),
while those in the rurals, saw alot (where it was clear of signals). Of
course, we're shooting for a happy medium.

Anyway...all I wanted to do was to chime-in to give another
perspective. I don't disagree with Bill's premise (at least as I
understand it) of needing signals to copy, in order to be able to track
propagation (geez, that's the whole premise of BEACONet <smile>). We
simply need to consider how those signals would impact the joy of other
facets of BEACONet operation, too.

I recently forwarded a note to several other eMail lists...sort-of
announcing our first European BEACONet^31 participant. I used Marc's
snapshot screen as an example of what could be copied from there on
28.131 MHz, with the hopes of getting some interest going.

Thankfully, it looks like there may be more. The note below is
something that I received in return. Dave (the author of the note) has
been with us before...so it's a nice start. Let's see what else we get
over the next few days.

It's just a matter of time before the DX record is broken again with a
connection between Europe and W3NRG, K7RR or N7YG, or... ????

Ev, W2EV

ps...the list this came from is now 'defunct', but I sent mail to it
from time to time, as it includes folks who have already used UI-View
and PSK31srv for use in the APRS service...so I figure it should be a
"natural" for finding more folks to come join us.

>
> What is their basis for so saying?

It depends on "who's opinion" you're interested in hearing. :o)
Honestly, the thread has turned into a "wad of yarn" and heading quickly
for status as "tangled mess of miscommunication". :o)

It all started around use of "Tactical Callsigns" at a public service
event...something that we don't have a "problem" with on BEACONet.

If truly interested, hit the TAPR website and search the archives of the
APRS Special Interest Group's mail remailer. It'll keep 'ya busy for

days. :o))

Actually if you look at one of my previous post from last week, you will
find I had F8BNN then. But I believe K7RR may also have copied this station
on the same day.

Any existing system "using the frequency" could be configured
to back off big time during those other special occurances. A
MINIMIZE mode so to speak..

Is there any sort of simple checksum or data check that
would flag the information received as being "complete" or
"partial". This will be important when it comes to automating
handling of the data.

I'm trying to make sure I have uimailer working correctly.
please excuse these messy looking reports.

Looks like I still have a problem with the time format. Will look at that
later today and have a fix.

424. [propnet] BEACONet prop report 23 september 2001

From: f8bnn_sur_free <f8bnn@free.fr>
Date: Fri, 28 Sep 2001 21:44:13 +0200
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-39128-2001.09.28-15.07.02--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi all
I am very surprised of my quality the first européan station on BEACONet.
I am going on this fréquency the saturday 22/09/01 by chance .Rich WD4RBX can
see that I don't
know the procédures. I think that today I control them better.
 The sunday I hearn the follow stations

001-septembre-23 18:11 8 stations

Callsign	Type	Latitude	Longitude	Km	Bearing	Last Heard
WD4RBX*	Grid Squ.	[EM84NM]		7156.2	294	sept 23 18:06
N2VRJ*	Grid Squ.	[EL86TX]		7703.3	288	sept 23 18:09
KD5CFB*	Grid Squ.	[EM40MJ]		8018.2	296	sept 23 17:29
F8BNN*	Grid Squ.	[JN39EC]		0.0	0	sept 23 18:10
N1NCO*	Grid Squ.	[FN42GL]		5827.9	294	sept 23 18:11
+KU5W*	Grid Squ.	[EM54UV]		7479.8	297	sept 23 18:03
W3□G*	Grid Squ.	[DM12JQ]		9374.3	315	sept 23 17:46
N3APZ*	Grid Squ.	[FN00DK]		6512.1	297	sept 23 18:07

The record is W3NRG. I hearn it one time .

My working conditions are IC 746 and yagi 3 éléments 3 band ECO (Italian
fabrication)
this antenna is at 8 meters above the ground   - 300 degrés
the altitude here is 290 meters above the sea.
the power 30/35 watts.
This week end ,I will be not in BEACONet, I will make the cq rj ww rrty contest.

I come back every day next week beetwen 17h3. and 20h z.
here we are z +2.
this evening no propagation.
excuse my bad english, it is difficult for me.
Gd week end at All
73 de Marc F8BNN

```
>  N3APZ*  Grid Squ.      [FN00DK]       6512.1   297   sept 23 18:07

>From the above list, the only complete contact made was with KD5CFB.
N3NRG appears to be only a partial contact (callsign not completely
copied).

Marc, please double-click on KD5CFB's icon and tell us what his
configuration code is, please.  That will put it in the record book.

It looks like only a matter of time before N3NRG becomes the new western
side of the HY-BEACONet^31 record!

Rendered body type: text/plain
```

```
Of course, it's not an exact science, but it's fun, none the less.

To stake a claim to a record, the receiving station must show a full and
complete/accurate copy of the DX station in the "Station List" *and* an
accurate configuration code for that station (double-click on the icon
of the DX station, press the <more> button, and see what the
configuration code is).

As we approach the winter DX season on 10-meters, this will certainly
become hotly contested!

Just wait until more of eastern europe joins in.  Can we get *any*
interest in Alaska, Hawaii, Guam or Micronesia/Australia?

This stuff is soooooo cool. :o)

I'm glad that you asked. :o)  The answer is "yes"...and what a nice way
to open the topic at hand...

Folks...please...let's try this for the next 30 days or so...just to see
what we get:

----- Within PSK31srv -----
Setup | Preamble Text = FOR INFO HTTP://GO.TO/BEACONET
Setup | CRC = [x] Add CRC to Frame
              [x] Validate CRC

----- Within UI-View -----
Setup | Station Setup | Beacon comment = [GR##ID]
Setup | Station Setup | Beacon interval - Internet = 2.50 to 4.99
Setup | APRS Compatibility | Umproto address = configuration code
Setup | APRS Compatibility | [ ] No UI-View extensions  (unchecked)
```

Notes: this is the longest preamble text allowed by PSK31srv and should
allow for the maximum opportunity to lock onto a signal before the
payload gets transmitted.

Adding the CRC will give us what we need to reduce the number of invalid
receptions. Checking the "Validate CRC" option is also needed. :o)

The rest is just standard stuff.

I've converted over already. Please, let's give it a try and see what
we get over the next month or so.

Hi, Ev,

But, given my stinky QTH, a "stick" antenna stuck
in a flower pot on a ledge surrounded by ten tall
steel buildings and several other challenges
that make he old ham in me cringe,
don't I at least get an "honorable
mention" for the distance record (9374.3km)
even with the garbled call?

Tongue in cheek,

73,

Ed

Once you enable CRC checking, if you are using the Uimailer program, disable
the callsign checking feature. I want to see what errors get through with
the CRC.

CRC is an excellent error checking protocol. I used it during my early days
as a 'BBS file leach' - works great. I want to see if I can eliminate some
of the code I have for the call sign check - it is real messy!!

Hi Ev
I checked add CRC and Validate CRC and ran like that for 24 hours. I received
zip. I looked in the terminal window of PSK31svr and sure enough I had some
stations that were full copy but no CRC and of course no plot. This is
definitely an all or none!

434. [propnet] UiMailer - Goofy Times

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sat, 29 Sep 2001 00:05:38 +0100
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>

Rendered body type: text/plain

I have solved the 'goofy time' display. Seems the format routine just did
not like playing nice with the rest of the program. I have beat it into

submission and from the two post I just did, it appears to be working
correctly. Pay no attention to the time at the top as I had to force these.
Seems the old blue screen of death popped up and I missed rebooting before
the change of the Zulu day.

Version 1.61 is up on the web site
http://home.earthlink.net/~n7yg/uimailer.htm

I am with you Ed.

How about "Peanut Whistle" Award? I really think that this should be looked
at. I am not making a Joke. I feel that after BEACOnet matures a bit more the
beacon personality (configuration code) will play a part in new record's.
Something like the QRP folks do. I think it is something like Watts per mile?
Right now W2EV, Ev is caring the load for BEACOnet record's and promotion
(Thanks Ev). Jeff is doing all the new programing targeted at BEACOnet^31
(Thanks Jeff). As it stands now our reports do not have the configuration
code passed along to the group. Whit out this information it would be quite a
task to accurately determine new records. Even if it was passed to the group
all the work would have to be done by hand because there is not any software
to perform the task. I hope that you don't kill the wife's plants. ;-) You
have my vote!!!!

Absolutly, this is an all or nothing proposal.  Please folks...

Preamble = FOR INFO HTTP://GO.TO/BEACONET
[x] Add CRC
[x] Validate CRC

Keep the transmission after the preamble as short as possible by placing
your grid without email.

If half of us do this and half of us don't our chances of success are
halved. :o)

I agree that it would be nice to keep records based on configuration
code (it's a great use of the data). If there were some mechanism for
including configuration codes in the station's window, that would make
things easy. Alas, there isn't. :o(

By the way...I am now fully configured this way. My station won't
decode anyone that doesn't have the CRC at the end. Let's try this
configuration through November 1st. Let's see what we can learn.

I tried to hack it in but I don't have the knowledge to know if it could be
done so my attempts were useless.

I was looking at the station window and what is saw is a a perfectly blank
column. Our grid square goes into the longitude column and the Latitude is
blank. If we ask Roger really nice maybe he could make the information that
goes in these two columns optional that would fit BEACOnet or APRS? the only

thing about this would be that we TX a slightly longer beacon.

Just a though ;-)

Why? No reason a packet (so to speak) with no CRC or bad
CRC can't be flagged as such. If the CRC's match - then
you know you have a good (probably) packet. If they don't
that doesn't mean it's not void of information.

Hi, Rich (RBX),

Thanks for the support! Of course I was
just having a bit of fun.

Since I am the only [DM12JQ], I know
very well when it is my signal that is being
reported and, as I pointed out in an earlier
communication, the Maidenhead grid
locators appear to get through without
corruption much better than the call signs
because of their position in the string.
(And, CRC or not, I still think we
should consider some rearrangement
of the string.)

Ev and Jeff (and a lot of others too numerous
to name here) have made a tremendous contribution
to the hobby and to the further propagation of
PSK31 as a main stream communications media
for us. Their patience at answering questions and helping
over the hurdles is most admirable.

I have to tell you that I would not hear "ZIP" at this
QTH if it were not for PSK31.

(You wanna know how bad?   I can't even
read WWV on 10 and 15mh most days on
a long wire due to the local noise and I have
not been shy about trying different receivers!
- That's bad!)

In any event, you must have a great location
and/or a good antenna because you are
almost always pounding through here.

And, the flowers died.

73,

Ed

Regarding the preamble...

If you manually edit the psksrv31.ini file you can make the preamble
almost anything you want (I'd limit it to less than 255 characters
though). There is only one catch to this (the same thing works in
UI-View for the station info and status text too); once you save the
file after manually editing it, any time you use "settings" the file
will cut the preamble text back.

This is how I get those ridiculously long transmit strings from my
equipment. Currently I only have UI-View set to a longer than normal
string, but when I return this morning I'll change my psk preamble to:

HTTP://GO.TO.BEACONET n3apz@arrl.net n3apz>hy0e00:[fn00dk]

My UI-View string will transmit the normal config data plus this
overlong string:

 de n3apz hy0e00 [fn00dk] n3apz>hy0e00:[fn00dk]

Of course, longer strings do stress the rig more, so I don't always use

longer than normal preamble settings (although UI-View is usually left
with longer string settings).

Karl, N3APZ

Hi Ed

I have noticed the same thing. I always check the grid square to see if I have a new or corrupt call. I am quite a dummy when it comes to how the software works. I though that the grid was picked up intact because the software looks for [] and what is in-between is recognized as a valid grid. I did not consider that the grid is at the end of the string. I receive a great many beacons from you. Your call is corrupt many of the times but your grid square is intact.

At first glance one would think that I have an average sight for radio work. In fact I have to get a VHF antenna to 75 feet to get a respectable simplex signal out. HF is another matter. I live on a chunk of land that is near a large lake (1000 miles of shore line) The land is like a finger with water on 3 sides. At it's closest it is about 300 yards away and at it's furthest it is just under a mile. The dirt here is loaded with Magnetic Iron (Black sand). The antenna that I am using is an Antron 99 at 50 feet (middle of antenna) above ground. For you prospectors on the list, Yes I have found Gold in my yard. Don't worry I am not going quit my day job just yet. I have always enjoyed good HF signal reports and this is all I can attribute them to. Fact or fiction?

Sorry to hear about the plants. My 6 element beam had a nice circle under it where 90% of the grass died years ago and won't grow back. LOL

There are multiple facets to this excersize:
o Lengthenging the preamble
  - to allow for full lock-on prior to the "payload" being TX'd
o Shortening the "payload"
  - assumption: a shorter payload=greater opportunity for the
                entire "payload" to squeak-through intact
o Adding CRC to the transmission
  - providing a method of assuring the "payload" was RX'd as sent
o Checking CRC on reception
  - using the received CRC to assure the "payload" was RX'd as sent
  - it is my understanding (anyone care to verify?) that by
    checking this option, transmissions without a CRC will not
    be displayed (hence, an all-or-nothing excersize)

```
Condition seem to be getting better here, I have just watched
n1nco and w2ev go from garble to blasting in here, in  just a 15
min period.

Jesse

Rendered body type: text/plain

Good Morning,

The new setup recommended by Ev
seems to be working O.K. here at
W3NRG. The usual stations are
being seen, most have the CRC
indicator and the only signals being
recorded on the Station screen are
showing "clean calls." Whether the
CRC or the longer preamble, I do
not know but so far "success" at
least here.

73,

Ed

W3NRG

The CRC idea is working fantastically, at least while we have super
propagation. I was just looking at the water fall when all of a sudden I
got this enormously wide signal down the band about 500hz. Turned up the
volume and It appears a bunch of renegade CB'ers using FM have infiltrated
the band. I also heard what I believe to be Heil signals down in that area.

If you and I are hearing the scumbags, then I would suspect that by
comparing our heard list, we should be able to narrow down the part of the
country they are coming from. I suspect the Midwest of Southeast.

Jeff

Was just wondering if everyone has the DCD checked in PSK31Srv Options so
they don't start transmitting if the squelch is locked on a signal.

Yes, I have it checked.

Jeff,
Interesting that you got two 'APZ's. Can you look back to see what you
acutally received, CRC-wise?
Ev

That is left over from yesterday. I checked the snapshot log and at 0007Z I
got APZ with a UTM of [FO00DK] and then again at 0012 with a UTM of
[FN00DK]. I believe this was before we all enabled the CRC checks.

This may look strange as I am running my PC clock in UTC time and sending
out the reports normally at 2355Z.

The PC time is something we may want to ponder as some are using UTC time
and other are using local time. UiMailer will correct from local to UTC so

maybe running the computer clock in local and allowing the Mailer to convert
to UTC is a better idea.

I have the clock running in UTC because my stupid ISP has their clock in UTC
and I have problems syncing files between my computer and the ISP when I try
to update my web pages.

Jeff

Rendered body type: text/plain

This from the ARRL website explains alot for me, anyway. :o)
Ev, W2EV

Since we have just passed the autumnal equinox, the fall DX season is in
full effect. Now is a great time to enjoy the best propagation in years
on 10 and 12 meters, which should peak over the next month or two. Of
course all of this high solar activity also tends to bring geomagnetic
disturbances and associated absorption, especially on high latitude
paths. But when you hear the K index on WWV reported at three or lower,
that is when conditions should be great.

15:08:08T W2EV>H¬,TCPIP,N3APZ* Port=1 <UI C Len=37>:
[FN03XD]^taFn¦

Got ya right there, Ev. Obviously I'm not running crc validate... With the
higer noise level I have here, using crc would cause no stations to be
displayed.

Going back to the preamble and text for a moment... As long as we're all
pretty close in frequency, shorter strings work fine, although weaker
stations can certainly benefit from the additional text. Once we start
spreading out though, scan and lock times are going to need longer text,
even with strong signals. I know from watching my system that even with our
relatively close signals, I sometimes lose someone because psksrv doesn't
lock on soon enough. Frequently I don't start getting copy until the
configuration code is being sent, so sending the data twice would be better
on my end.

Karl, N3APZ

Hi Jeff

This is not new. Not sure what I have been hearing for quite some time but it
sounds like whistling. Fortunately it falls well out of my scan range.

Hi Ev
I have received a good many of your beacons but they were only partials as
much as 90%. All were back scatter. I am playing with 2 complete BEACOnet^31
setups My Usual set up & one is RX only I am playing with different antennas
(including a 6 element beam) and sound card setups. Ill bet if you double
your power Ill RX 100% most of the time.

481. [propnet] Comment on the use of CRC

From: "John Atkins" <john.atkins@110.net>
Date: Sat, 29 Sep 2001 16:35:15
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-39329-2001.09.29-17.00.04--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I find that if I use CRC in the received signals only very occasionally do
I actually plot one. As someone else pointed out, to plot a station with
CRC enabled requires a good, strong signal. Even for the most messed up
plot the Grid square code is usually good.

For me, a lot of the interest comes from the fact that I can see the signal
strength increasing/decreasing with time as shown by how well I'm decoding
a station from a particular area. How messed up the final result is, is
related to some extent to signal strength. Of course a burst of noise at

the wrong time will do the same thing! I find a UI View screen with mutiple
attempts to plot the same station interesting. For some stations there may
be 3 or 4 "attempts" before I get a clean call sign. For others it's the
full and complete call first time.

I guess what I'm saying is the fact that you can only partially decode a
station is also telling you something about band conx, just as a fully
decoded one does.

I'm transmitting with the CRC, but I do not have the CRC enabled for
receive at the moment

All the usuals today...

Ev comes and goes. I find it interesting that I'm receiving him so well and so consistently. I get
fragments of Ev's signal almost every day and I find it hard to believe that backscatter is so frequent.
  Maybe it's something related to the relative warmth of lake Erie? The water temp is in the low-mid
60's. Perhaps it's causing some kind of inversion further inland?

If this keeps up, I might have to start working on my uWave stuff sooner than anticipated.

2001-September-29 18:22 6 stations

Hi Karl,
This is really interesting. I'd almost think that the very high solar
flux is causing alot of "short scatter" conditions. Even so...it's kind

of cool to see.

This evening, I see N3NRG and N7YG on my map...and alot of partials from
all over. I'm doing the CRC Validation thing myself, too.

Ev, W2EV

John,
I agree whole heartedly. We've always agreed that we learn as much by
seeing nothing as we do by seeing something.

The idea was to give CRC's a try for a longer period of time than just a
day or two. It's nice that you are transmitting with a CRC, even if you
don't validate it yourself.

Thanks for being on!

W3NRG is now set up in accord with W2EV's latest suggestion.

I am not sure what to make of today's experiment.   It started
out well with good clean reports but as the day went on,
the old partials started to creep in again.

Also, the Mailer is giving me duplicates.

Anyone else get that "FB" report? Was it another fluke?

Rendered body type: text/plain

Hi All
I thought that it might be nice to report on both CRC & NO/CRC. This is my setup for the CRC experiment.
Set up one = Receive only, Vertical dipole. NO CRC. Note W2EV and my own wearied call D4RBX NO CRC
Set up two = Antron 99 RX & TX YES CRC With long preamble. Below is the results.

I wish that I could find a way to copy and paste to AOL. I have a really neat Propagation report generated by UI-Path. If all else fails Ill do it by hand tomorrow.

Rich

Hey Rich,
I haven't played with UI-Path yet. Does it have any way to create a text-based datafile, similar to UI-View's Snapshot function? If so...what's in it?

Ev, W2EV

493. [propnet] modes

From: Bruce Walker <bruce@w1bw.org>
Date: Sat, 29 Sep 2001 22:55:04 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-39367-2001.09.29-22.20.00--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

A couple of weeks ago, I tersely brought up the issue of modes again,
and a short survey of mode preferences for HY beaconet revealed most
people preferred beaconet^31. I was on my way out of town at the time,
and didn't even respond. But I'm curious...why do you all like PSK mode
for this purpose?

Maybe I'm having a hard time understanding where beaconet is going. My
view of the intent is to create an automatic propagation data collection
and monitoring system across multiple bands. I find the implementation
of beaconet^31 ill-suited to this for several reasons:

1) Channel capacity: b'net^31 transmissions are often on the order of
20 seconds in length. With only one decoded stream at a time, and
repeats on the order of 200-300 seconds, we can only handle a handful
of stations.   I guess we are now soliciting a parallel decoder, which
would help. We would also need either frequency coordination or
(better yet) software carrier detect: when transmitting, at least
transmit on a locally idle frequency.

2) Poor data integrity. At least we are starting to use CRC
generation/checking, which should take care of most of the problem.
Yes, PSK31 has S/N advantages over 1200baud FSK, but because of the very
limited channel capacity in the current implementation, the odds of
getting at least one end of your transmission stomped on are pretty good.

3) No HOPn-n support. Not that we could handle the capacity now if we
had it :-). This is a really cool feature for filling in the holes and
extending coverage.

4) Why PSK31 on HF and AX.25 on VHF? Many of us have rigs like
IC-746/706 which can work on two or three bands of interest here, and
it's a much more complicated software setup to have to switch modes as
well as bands to round-robin across bands.

All of these problems could be taken care of with new software.
Personally, I love the "dsp" modes like PSK31, and as a hacker, I've
been working on some custom software for linux to do some of these things.

But why are we trying to reinvent a wheel here? UI-View with AX.25
works for HOPn-n processing, AX.25 takes care of CRC and DCD, and
transmissions are short enough to have reasonable channel capacity.
And it's a pretty easy script which I had running under linux to change
bands on my radio and run several bands round-robin (not that I ever
heard anything on VHF :-).

By the way, I am currently up on 10m AX.25 with level 2 HOP1-1
processing, and I am also monitoring b'net^31 on that band rx-only. If
anyone sends beaconet^31 with a HOP1-1 path, I should digipeat it to the
ax.25 side.

Cheers,
--Bruce W1BW

What UI-Path has is a transmission table (among other features that cannot be copied & pasted) that can be copied to the clip board and pasted in to what ever. It collects the stations & amount of beacons heard over time in one hour increments for 24 hours. Andy (the author) has been working hard to fix the run time errors. Well, you know that from the UI-View list. The table looks something like this.

```
Station  00:00    01:00 ~ 13:00
WD4RBX 4              18         6
```

Tell you what. Get the program and If you are not fascinated with the report it generates Ill eat my BEACOnet. LOL. Speaking of the run time errors it looks like Andy has got it fixed. The run time errors are caused by corrupt beacons. :-0

Rich
WD4RBX

Hi All

After leaving UI-Path32 running on the net for a while I managed to re-create the error which seems to have been caused by a corrupted DX: status text.

I have fixed the bug.

Latest version can be downloaded from

http://www.btinternet.com/~apritch/uipath364.zip

497. [propnet] Another Interesting "Cut"

From: esack <esack@pacbell.net>
Date: Sun, 30 Sep 2001 03:41:56 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-39408-2001.09.30-06.03.33--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I'll leave it to the propagation scientists
among the group to explain the physics
but it seems to me that it would be fun
to correlate the time that we start hearing
the East Coast BEACONet signals out
here on the West Coast with the kind of
ten meter DX day that then evolves.

(As example, it is 3:30 A.M. PDST here
at the moment and I am just beginning
to hear the first whispers of the beacons
to the east.)

I suspect that has already been done but
clearly the data we are gathering now
makes it possible to perhaps go a
bit further.

73,

Ed

Hi Ed,
Interesting concept. Correlation should really use "absolute" data
wherever possible. It would probably be tough to let us humans "rate"
the day's propagation -- as each of us would rate the same event
differently. However...I think your idea is sound, it's just a matter
of thought as to how to properly document using universally-available,
verifiable data.

With that in mind, below is a brainstorm of items that would be required
to chart, if we were to engage in any scientificly-sound correlation
study. I'm generating this list from the perspective of the data being
centrally collected by a future-visioned DATArchive server (which simply
accepts periodic eMails [from Jeff's program], parses out the
appropriate data, displays an icon on a map of the eMailing station and
allows others to click on that icon to then update the map based on the
datafile they sent to the server). Of course...DATArchive doesn't exist
yet. :o)

Wouldn't it be cool if, in the mean time...

o Configuration Codes could be auto-displayed for each RX'd station
  - This need goes away, if everyone TX'd with 25-watts to an
    Antron 99 at 30-feet, but that isn't going to happen any time
    soon. :o)

o Display current Solar data could be automated with each posting
  - Solar Flux, A-index, K-index, Solar Wind Velocity
    Proton Density, etc. (the first three being probably the most
    "correlatable"

Jeff's program already identifies a first- and last-heard date/time.
There appears to be even more related data available, should any of us
be using UI-Path, too (though I've not tried it yet).

The inclusion of the above (in the auto-sent snapshot email) could
easily be used to hard-correlate 10-meter propagation (as actually
observed by BEACONet) with other known factors and the study could be
underweigh. :o) Of course, I wouldn't presume that it's Jeff's job to
include this stuff, as there may be other ways to do it.

Just some random thoughts. Anyone else care to chime in, too?

Rendered body type: text/plain

Ok, ok. :o) I'll get UI-Path and play with it a bit. Would you mind
forwarding the URL? I'll not only get it but put it in the "next
version" of the BEACONet website (under development right now...in case
anyone wondered why there hasn't been many updates to the existing one
in a while).

It's good to have your enthusiasm on the list, Rich. :o))

Warmly,
Ev, W2EV

Rendered body type: text/plain
```

Bruce made some interesting comments...which I'll defer personal comment on until later (to give others an opportunity to voice their opinion first). However...I thought I'd grab onto one of his thoughts right now, with the hope of assuring everyone is "on the same page" in the mean time...

> By the way, I am currently up on 10m AX.25 with level 2 HOP1-1
> processing, and I am also monitoring b'net^31 on that band rx-only.

Bruce (and Rich 'rbx, I think) both have the capability to BRIDGE between BEACONet and BEACONet^31. As such, their configuration codes should include HY2... on the BEACONet^31 side (meaning that they are a BRIDGE, but not a PEER [HOPn-N digipeater] to that network), and HY3... on the BEACONet side (meaning they are both a PEER [HOPn-N digi] -and- a BRIDGE). The complete explanation is found in the BEACONet protocol on the website.

And even more importantly (this is where all BEACONet^31 participants need to be on the same page), all BEACONet^31 traffic *needs* to include the CRC at the end. It is still your own choice as to if you have checked the "Validate CRC" option or not. This will help to differentiate traffic from the same band (HY, in this case) that originated as ^31 from that originated as AX.25.

Hi Ev
Latest version can be downloaded from

http://www.btinternet.com/~apritch/uipath364.zip

I do not know what software you are using to build your data base. I am
paying with Microsoft Excel. I find it easy to convert UI-Viwes snapshot &
UI-Paths Transmission table text to data.

Rich

Rendered body type: text/plain

Hi, Ev,

Your thoughts on data collection will take some
time to digest. Will do so but you are the
technologist on this on, not me, for sure.

I presume that someone is (should be) collecting
the data.   Not a parallel, of course, but
someone setting up a data collection and
digesting and cross sectioning site such as
the "findu" site does for APRS.

I believe you are doing something like that
manually, or so I gather from some
past communications.

For my part, I am finding it handy to put
a preamble on my daily reports which
remind ME of the settings I had during
that capture period.   I am sure that
others can better arrange the data or
think of thing I have missed or don't
need but following is a possible
layout.

By the way, I will also be taking a look
at the UI-Path download today if the
internet gods so smile.

"W3NRG 28.131MH, CORONADO, CA, [DM12JQ], HY00E03
EXTENDED PREAMBLE, CRC = ADD TO FRAME, VALIDATE
SQUELCH SET LOW AND SLOW
SCAN +/- 100CPS, DELAY 1=2, DELAY 2=2
USE DCD AND AUTO CAPTURE LOCATORS CHECKED"

73,

Ed

It's been a ggod morning so far, for me. I have five stations
plotted. I also saw n3apz, ku5w, kc5dui, and wd4rbx all come
through, but garbled enough that they wouldn't plot. I also so
f5smz come through from Europe, but it was also incomplete. Has
anybody else heard him? I think he has just recently started to
transmit.

Rendered body type: text/plain

Had to restart my system. Also had to delete today snapshot file as it
appears to have been corrupted when I restarted the computer.  Had to change
my computer time back to local as a couple of other programs did not like
the UTC idea.

Been watching the waterfall and the levels of the signals are quite
interesting.  I am copying NCO, VRJ and APZ with absolutely no reading on
the s-meter, yet I still get a good plot as the CRC's match.  This would
```

indicate the band is not quite open to the east coast. But, then I hear RBX
a 2EV both with signal levels in excess of S5.

Nothing out of Europe yet and I still have not heard anything from the
Pacific NW.

Rendered body type: text/plain

Hi all,
it's with a great pleasure that I can tell you that I'm now QRV on 28.131
PSK as a permanent station as planned some days ago (target date was 01
Oct!!!)
As soon as my rig (FT-102) dedicated for this experiments will continue to
work I will transmit continuously on the network.

My current working conditions are:
FT-102 with 90 Watts
Vertical antenna: Solarcon A99.

Please all, watch for my signals. I hope that my station will help our
brilliant community to deal with prop mystery!

Thanks all for your support. I keep you informed, and trust me ... I'm so
happy to me now a member of the "BeacoNet group".

I hope you will at least receive my signals.

Hi,

I did get back to Boston, but unfortunately the power supply problems
turned out to be more serious than I hoped. I am buying a new PS, but I
have to wait until they are back in stock at my local HAM store, whicnh
won't be until later this week.

In the mean time, I think I still have a 10 Amps supply somewhere in my
basement, and I will try to locate it. I may be up with QRP lateron
today or tomorrow.

Rendered body type: text/plain

I'm afraid that my collection of data is limited simply to reading the
posts to the list, thinking about it from the perspective of the station
that sent the eMail, then deleting the eMail. :o(I'm not doing any
archiving at all...yet.

However...I'm thinking that it may not be a bad idea to setup a "blind
mailbox" on a server that I have access to, in order to begin archviving
things (at least as eMails for now).

Jeff...is your system capable of eMailing to two eMail addresses? On,
to the BEACONet remailer and a cc: to another "archiving" email address?

OK, I am back, at least with a about half the power I used to be able to put
out. I am running a round 25 Watts now, into the omnidirectional Hussler.
I found my old triplite 10 Amps power supply in the basement, and I
installed it. I hear several of you already :-)
Let's see if I can get the rest of my stuff back on the air soon!

Hi, Ev,

Seems like a darn shame to let all of this
valuable 10 meter data get lost. I wish
I were as skilled in writing and adapting
software as some of the other members
of the group but I am not. I am a user
not a developer in this area.

However, and I am being presumptuous
here, it would seem like a software
capable guy like Jeff Steinkamp could
modify his UI-Mailer (and File!) so
that the key reporting station data
was always stored in the station's
UI-Mailer (and File) application so
that when the BEACONet participant
sent his "end of the shift" report it went
with the requisite configuration and
set-up data which would later permit
an analyst to do a variety of cuts.

I'd be happy to volunteer to archive the
resulting files but, like some others, I
travel from time to time and do not
keep my computer links on during those times.

The better way as you suggest would be to open up
a "target accumulation file" maybe on
the Tuscon Amateur Radio site, for
instance, in which the data accumulated.

As said, I find the APRS "findu" site to be
very worthwhile when I am trying to determine
paths or find a friend who is cruising or
whatever. The BEACONet site would
have a different purpose, of course, but
some ambitious college students (and we
hear from them here from time to time)
could get some awfully interesting papers
out of some next level analysis of the
data.

Just "being a nudge".

73,

Ed

Rendered body type: text/plain

Could someone please refresh my memory.

Is there a setting in UI-VIEW that limits the
number of stations that get recorded in the
Stations List to 10??

I looked in the Setup Options and in the
Help files and did not come across the
answer.

Why? I see PA3EUG coming in just as solid
and complete as the other East Coast
stations (even with his limited power
output) but UI-VIEW won't add him to the Station
list (perhaps because there are already ten stations
in the list ????)

Or not?

Ed,

I don't think so. I've had up to 3000+ stations in the list when I connect
to the APRS.NET aprs server. Are you sure you receive my signal 100%, with
CRC intact? I would guess that the problem is somewhere there....

73s,

529. [propnet] 30 meter heard list and 53.53

From: Bill Vodall <wa7nwp@yahoo.com>
Date: Sun, 30 Sep 2001 17:16:52 -0700 (PDT)
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-39557-2001.09.30-19.41.48--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

My 30 meter packet counter has been updated. Still no
range and bearing - that'll be showing up one of these months.
Now I have monthly totals and I'm preserving old reports to
archive the data.

  http://www.jnos.org/nwprs_usage30.html

I'll do the same for 10 meters (AX25 packet) one of these
weeks - if there's some activity out there.

Big question is on 53.53.   Should I aim at setting up
there or not. If I do, it'll be with "appropriate other
usage" to get the bang for the buck from the equipment.

If the consensus is to keep the channel pure - I'll go for
50.62 - the nation calling frequency. Again - not a real
good fit for the definition of the channel - but good
enough to get some activity going.

73,
Bill - WA7NWP

It's not really lost, Ed.  It is in TAPR's email archives.  If research
were to be initiated, one would simply search for eMail headers with
"BeaconNet(PSK31) Prop report" or "catch" in the header.  They're all
there, just not in one place.

Hi Dave,
Yes indeed.  I'm going to try to figure out how to activate both without
"clobering" eachother at my house.  There are distinct advantages to the
AX.25 version (as noted by Bill and others).  Thanks for trying and
sharing!
```

Hi Ev and all

If someone comes up with a good Idea please share.

I cut BEACOnet off last week because BEACOnet^31 clobbers the BEACOnet setup
and with the lack of activity on AX25 I could not justify running them both.
Since interest in BEACOnet is growing Ill fire up AX.25 today and let it run.

The way I am running them side by side is to use 2 copies of UI-View on the
same computer so I can control BEACOnet and BEACOnet^31 independently. I set
the TX time on BEACOnet^31 to 7 minuets in the hope that most of the BEACOnet
stations are TXing around 5 or 6 min and will not be lost when My PSK31
beacon TXs.

Hi, Ramon,

Yes, I saw the CRC apparently intact, not just one
time but several.

I have had more than ten stations showing on the
UI-VIEW Stations screen also and was wondering
if I had changed some setting in the process of
the several changes we have all made in the
past several days.

I'll let you know how it goes today and hope
your new power supply arrives promptly.

Best thing I can think of Rich is a duplexer (unless you have 2
antennas). In that case you should be able to build a multi-stage
notch filter and put it right at the antenna connector on the rigs. The
more stages you have, the deeper and more narrow the notch will be.

If anyone doubts this will work, try to remember the old tv-scrambling
method used by CATV outfits that put a beeper signal right in the
channel. A notch filter was then used to tune out the beeper with
minimal degradation to the tv signal(s).

Designed properly, you should be able to get something in the
neighborhood of 60 db.

There's another method that comes to mind, but it's considerably more
complex. If you combined tx/rx switching with something like a low
voltage clamping circuit, you could effectively limit the receive
signal strength. Since normal receive signals are going to be in the
microvolt range, you wouldn't see any problems during normal receive.
When you kick the rig into tx, use the relay to bypass the clamp.

If you have access to manuals for military equipment, look up the
antenna relay circuit for an AN/R-1051(x) receiver. If I recall
correctly, it's the A9 circuit (used to teach that stuff 20 years ago).

Hi, Ev,

Looking over the weekend's reports,
not all would have those key words in
the Subject box.

Would it be a good idea for you to
add that suggestion in your
BEACONet PSK31 setup instructions
(i.e. a standard "Subject" line format)
or is it already there and I have not
looked recently?

73,

Ed

9. [propnet] "igate" psk31 to ax.25 on 10m

From: Bruce Walker <bruce@w1bw.org>
Date: Mon, 01 Oct 2001 11:07:16 +0100
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-39650-2001.10.01-10.32.34--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I am now running an experimental setup of using UI-View IGATE functionality to gateway psk31 to ax.25 on 10m. I'm using the dual receive capability of my IC-756 to listen to 28.128 and 28.131 simultaneously. Yes, that
effectively costs me 3db on each band, but what the heck. RX audio goes to the TNC for ax.25 and
soundcard for packet, and serial port goes to the TNC. Since PSK31srv acts like an Internet APRS server to UI-View, I set
it up to pass "internet" traffic (that which I receive from PSK31) to AX.25. On AX.25, my relayed
packets look like the standard APRS igate encapulation:

10:55:54R W1BW>HY1FB0,HOP1-1 <UI C Len=36>:
}KC5DUI>HY0E01,TCPIP,W1BW*:[EM26WE]

So, this is one-way only, but by bridging the PSK31 traffic to AX.25, I'm generating a lot more AX.25
traffic on '128 for those interested in monitoring. I think this is better anyway...we don't need me to be another FN42
PSK station (two others within 15 miles), and it has been pretty lonely on ax.25

Yesterday (Sunday 30 Sep), I was receiving both frequencies, but not gating them. Here's my heard lis
(times EDT):

```
--------------------------------
Callsign    Type       Latitude   Longitude      Km   Bearing  Last Heard
--------    ----       --------   ---------      --   -------  ----------
```

```
 W1BW       Grid Squ.        [FN42HK]            0.0      0   Oct 01 08:51
 PA3EUG*    Grid Squ.        [FN42KI]           22.6    114   Sep 30 22:14
 N7YG*      Grid Squ.        [DM42NF]         3640.7    265   Sep 30 21:26
+K9ER        Grid Squ.        [EL06UF]         3036.6    242   Sep 30 21:13
 N2VRJ*     Grid Squ.        [EL86TX]         1983.6    214   Sep 30 19:17
 KD5CFB     Grid Squ.        [EM40MJ]         2196.5    239   Sep 30 19:05
 KC5DUI*    Grid Squ.        [EM26WE]         2072.8    258   Sep 30 18:59
 N1NCO*     Grid Squ.        [FN42GL]            8.3    304   Sep 30 17:17
 W3NRG*     Grid Squ.        [DM12JQ]         4136.5    270   Sep 30 14:37

K9ER and KD5CFB were heard direct on AX.25, others on PSK31.

```
There's no way that we're going to run 3 KHz apart on 10 meters
and not completely zap the other station.  It's
hard enough to use 600 KHz on 2 meters.

--- Bruce Walker <bruce@w1bw.org> wrote:
> I'm using the
> dual receive capability of my IC-756 to listen to 28.128 and
> 28.131 simultaneously.

Bob B came up with the idea to put the PSK31 right in AX25
frequency range for the 30 meter setup.  Very ingenious.  If
we did that here, one rig could be used for both PSK31 and AX25.
It would be a bit busier - but that won't be any problem most
of the time.

It should be possible to scan a psk31 range that's outside
of the AX25 carriers so the psk 31 scanner won't always be
catching the 2 AX25 signals.

I know the standard KAM carriers are 1600 and 1800 Hz.  But
it's worked much better when moving them to somewhat near
2100 and 2300 Hz.

73,
Bill - WA7NWP

Hi Bruce

I am back on AX.25. My setup is a bit different. I am sending a beacon on
both AX.25 and PSK31. I am sending stations from PSK31 to the AX.25 but not
the other way so as to not confuse the PSK31 folks. It is easy to tell from
the AX.25 report you just sent the group what stations were heard direct
(ax25) and what ones were from BEACOnet^31.

16. [propnet] AX.25 after 2 hours

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Mon, 1 Oct 2001 11:39:31 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-39684-2001.10.01-14.04.35--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I have been on AX25 for almost 2 hours. I can hear signals, 3 possible 4 at
varying signal strengths. One signal appears to be almost an S6. I have
yet to plot a single station. I have checked out the AGWPE using my 2 meter
rig on the APRS freq here locally and it works correctly even with a signal
just above the noise level with the radio un-squelched.

I suspect the problem has to do with tuning. Although I am on 28.128 on the
dial for my radio there seems to be a marked difference in the audio
frequency between the stations I am hearing. How wide is the filter in
AGWPE and what is the tolerance for the center freq for AX.25 on SSB at 1200
baud.

Is my problem a frequency problem or Am I not getting enough signal level
for the sound card algorithms to compute. This new AGWPE has a built-in
tuning scope, but with the very shot duration of a packet burst, it's almost
impossible to try and tune on another station.

A few days ago there was a post wondering why we would choose PSK over
AX.25. Well I believe this pretty much sums it up. Ax.25 does have a place
with FM on 2 meters and 6 meters, but 1200 baud AX25 has always been a
problem using SSB.

Hi,

I am seeing double entries for all stations. Somehow, UIVIEW is seeing 2
coordinates for me: one based on long/lat. and one based on maidenhead
locator. It's not in my Station Setup, I checked there. Please remind me
where to look, so I can correct the situation?

Attached is the 2 PM EDT report from my station (I have one emailed to me

every 2 hours during the day). It's still saying "miles", I will correct the
situation and download the new UIMailer tonight :-). It shows both the
stations heard, and the problems I was talking about.

I've been receiving every packet twice for MONTHS. Can't figure it out, and no one on either APRSSIG or here knows how to fix it. Here's a brief sample of my history log from WinAPRS, as you can see, most packets are doubled, a few are not:

Hi all

Today was a play day for me because I start the grave yard shift tonight. I
spent a great deal of time in the shack playing with BEACOnet and^31. After
I got my I-Gate going I noticed that there was a sweeping noise that ran all
across the waterfall display on PSK31^svr that you could set your watch by.
It took exactly 4 seconds between cycles. It was very effective in killing
weak beacons hitting the beacon 2 or 3 times every time. It sounded like
atmospheric noise that I have heard many times in the past. Do to the
frequency I thought that maybe it was some local noise but now that the sun
has gone down and band conditions have all but died the noise is gone. I was
wondering if it has anything to do with this? (below)

Rich
WD4RBX

NORTHERN LIGHTS: A pair of solar wind disturbances buffeted Earth's

magnetosphere during the weekend and triggered a geomagnetic storm. On
Sunday, Sept. 30th, and Monday, Oct. 1st, high-latitude sky watchers
spotted some of the most beautiful Northern Lights of the young aurora
season.
SOLAR ACTIVITY: A solar proton storm is underway following an M9-class
eruption on the Sun today. The blast also hurled a bright lopsided
coronal mass ejection into space and, perhaps, a solar wind disturbance
toward Earth.

Rendered body type: text/plain

Hi Bill,
At this point the only "other traffic" that I would suggest placing on
53.53 is BEACONet from 28.128 or 28.131 (where there is plenty of
activity across the continent.

There is historical evidence that points to the idea that non BEACONet
traffic can unnecessarily logjam the frequency, crippling it for
BEACONet use. The issue is more about DX propagation tracking than it

is about filling the frequency with unrelated traffic.

If one has a need that isn't related to BEACONet's vision for use, it is probably best to find another frequency. 53.53 is a "national treasure" in that is is vacant everywhere, without exception...just the thing that BEACONet needs to maintain in order to be effective.

Ev, W2EV

Hi Ed,
Fine point...

Folks, when posting "Snapshots" (the text file that is created when you press the <Snap> button at the bottom of the Station window, please include the word "Catch" in your subject header: Today's Catch, yymmdd Catch, etc.

If using Jeffs (very cool) add-on, then everyone is already covered by a standard subject header.

Yeah, I was thinking about buying an HTX-10 connecting a KPC3 and running the whole thing off of battery/solar in my back field (1000 feet away), but then the serial cable would be awefully long. :o)

> Bob B came up with the idea to put the PSK31 right in AX25
> frequency range for the 30 meter setup. Very ingenious.

Yes, I think we tried it early on (a year ago or so) and had a problem...mostly from the aspect of "tune and play" operation. There was enough of a frequency difference between how different person tuned their transceivers that the aread between "mark and space" wasn't as universally "wide" as one would have thought and the PSK31 system was locking on them, causeing us to miss PSK31 transmissions. Of course...this is just a fading memory so I may have some of the facts slightly askew :o).

Maybe we should be looking at separating AX.25 and PSK31 by a greater frequency on 10-meters? 28.128 and 28.231 or 28.331? Pro's and Con's? Or are we solving a problem that isn't really that big of a deal, overall?

HI all,
it seems that Murphy's law has decided to enter in my shack.
Today (after changing the fuse yesterday) it appears that my switching coaxial relay BENT OVER !!!!
Well, I will dig the problem in the coming hours and hope to (finally) back on the air 24/24.
Sorry for inconvenience ... but I really want to be active participating station of this wonderful
project Beaconet even if the Lord doesn't really help me for the moment.

> sums it up. Ax.25 does have a place with FM on 2 meters
> and 6 meters, but 1200 baud AX25 has always been a problem
> using SSB.

I think that we are dealing with different issues, between the two
modes...I think so anyway.

The premise of BEACONet operation is that it must be
Plug-Tune-and-Play. Why? Because the band may be open only
sporadically (6-meters & 2-meters are good examples). If you have no
one to tune to, then you must be assured that you are on the same
frequency, even if you can't hear anyone else.

That is, of course, a favored feature of the use of FM. On 10-meters,
in the USA, we are not allowed FM-carrier based data transmissions. Our
only choice is "SSB". Trials using the APRS service on the 30-meter
band show that tuning is *quite* critical when using 300 baud (the two
tones are quite close together). 1200 baud "SSB" is *significantly*
more liberal, when it comes to frequency tuning errors.

However...1200 baud data on "SSB" now introduces the issue of
transmission clarity of audio. Most people are amazed how low they need
to set their microphone gain when using data modes. Setting them too
high causes all sorts of problems for others.

Setting mic gain is quite easy: watch the output power indicator during
a transmission. Back down your mic gain until you notice it (power
output) drop "slightly". That (or even a little lower) is probably the
best setting.

On the receive-side...make sure that Automatic Gain Control (AGC) is set
to "Fast" and that you are using a standard filter (narrowband filters
are the "kiss of death" to 1200 baud data).

AX.25 has some real advantages to our work. It's just important to know
that the factors that come to bear when using it are different than the
ones that we need to keep in mind when dealing with PSK31.

I disagree, but I'll defer to your request. You need packets to be heard. A channel 10% used by some other service would provide those packets.

I asked earlier if there were ANY 53.53 openings recorded this year. I received no response. The logical deduction is that there were no packets heard.

> There is historical evidence that points to the idea that non
> BEACONet
> traffic can unnecessarily logjam the frequency, crippling it for
> BEACONet use.

I disagree again. Case in point is 144.39 would be fine for catching sporadic 2 meter openings.

A busy meteor scatter weekend is another thing!

> The issue is more about DX propagation tracking than it
> is about filling the frequency with unrelated traffic.

There's a BIG difference between "filling" and "using" a frequency.

Here in Seattle, 144.39 is close to filled with packets being digipeated back and forth. The same traffic, once dupes are removed, barely tickles the transmit on a radio I'm running on a different frequency.

> If one has a need that isn't related to BEACONet's vision for
> use, it is
> probably best to find another frequency. 53.53 is a "national
> treasure"
> in that is is vacant everywhere, without exception...just the
> thing that BEACONet needs to maintain in order to be effective.

Not in the Pacific Northwest. It's the output of a coordinated repeater channel. I've already been warned by the president of the coordinating establishment NOT to put a station on there.

It's not worth the hassle, to me, to fight the bureaucracy for recognition of 53.53 as a special case - for a system where a couple dozen packets a year IF WE'RE LUCKY will be recorded.

Economics matters. Folks have limited resources, radios, towers and frequencies. Find a reasonable return on the investment, and folks will play...

HI Jeff

I got to play for about an hour today. I wanted to see if I was hearing your packets. Here is two (below) that I got from you. Notice the time they were received. I am hearing other packets that do not decode but this is normal. Also last summer I ran a test with AGWPE and a TNC running side by side hooked to the same radio. The TNC blew the sound card out of the water. This was RX test only. Also someone else ran the same test (I forget who) and there test showed that sometimes AGWPE would catch a packet and the TNC would not and vice versa.

Tip
Running open squelch on your rig helps.

Rich

hearing all kind of stuff but have not decoded a thing. Think I will hook the PK88 up and see what I can catch. I still believe there will be a tremendous tuning problem as not every radio is exactly 'on-freq'. With the short 500 millisecond burst, it will be next to impossible to tune on a freq. When you do get one station tuned in, the next station will be off feq a bit. Right now I have an extremely strong signal, but still no copy.

I am off work tomorrow so will attempt to play around with the TNC.

46. [propnet] mixing ax.25 and psk31

From: Bruce Walker <bruce@w1bw.org>
Date: Tue, 02 Oct 2001 17:20:13 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-39917-2001.10.02-16.45.11--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I really like the idea of experimentally mixing PSK31 and AX.25 in the
same passband. 1200baud ax.25 uses Bell 202 signalling: widely spaced
tones at mark=1200 and space=2200 hertz. If we put our PSK tones at
1700Hz using the same dial frequency, the two modes should have minimal
effect on each other.

The most backward-compatible way to test this given the number of people
on beaconet^31 would be on dial frequency 28.130800, keeping psk at
28.132500. Or we could pick 28.128 or 28.131 as a base with at 1700hz
PSK offset.

Does anyone mind if I try the first? It would be really good to see how
good packet capture compares under those circumstances. However, not
sure when I'll do this...I'm headed up to Maine Wednesday (with radio).
If my antenna is still in the air, I may try it Thursday.

Cheers,
--bruce w1bw

         I didn't answer because I no longer have the email, but I believe
KC5DUI has heard my 10-watt signal several times this year on 53.530.

48. [propnet] Strong Tone Modulated Carrier

From: esack <esack@pacbell.net>
Date: Tue, 02 Oct 2001 15:22:47 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-39926-2001.10.02-17.44.21--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Has anyone else been bothered by a continuous
very strong tone modulated carrier on 28.131mh
today.   It has been on almost continuously all
day.   PSK31 will detect the signal in terms of
d's, h's, and t's but I suspect that is just because
those are easily decoded.   In other words, I
don't perceive that the signal is PSK31
modulated intentionally.

I can't tell yet if it is "from a distance"
(it shows signs if fading from time
to time but that might just be something
bouncing around in the transmission path.)

I am surprised that no one else has reported
it yet.   (And yes, I went all through the
QTH looking for something that I might
have left on - Nothing found.)

73,

Ed

Rendered body type: text/plain

Mixing PSK31 and AX.25 could be interesting...but we've gotta first
determine if we want to do that or seperate by more frequency (to allow
for better chance at concurrent operation at the same site). I think
these are mutually exclusive desires. :o)

If anyone is experiencing "lots of signals but no decoding", then it's
time to do some troubleshooting. Tuning is really not that critical
using 1200 baud.

I would suggest starting with running just HyperTerm and a TNC
(configured for Level-I). See if you get decodes there. If running a
KPC3, then make sure you run CD SOFTWARE and "open squelch".

Conversely, run UI-View and open a Terminal Window. That will tell you
what is actually being decoded. It's possible that someone is
transmitting using a non-understandable tx format, etc.

Rendered body type: text/plain

Hi Bill,
There are many issues at play in my response to your inquiry. No one
stands on it's own...but the end recommendation is a culmination of all
of those issues.

144.39 MHz has proven to be a very poor indication of 2-meter Es
openings, and a fairly good indication of tropospheric openings.
Interestingly, over the past two years, New Mexico has seen Es openings
on 144.39 (once from near my area in NY, actually). The event went
unnoticed by APRS folks in my area, and Earl (in New Mexico) jumped for
joy! The theory was that the local traffic muffled the DX packets,
while the DX station (who lives in a *severely* lower RF environment)
saw lots of position reports. This has happened on more than one
occasion. Had BEACONet protocols been in operation, I believe that
things would have been much more productive for both ends of the
circuit.

As for tropo...the APRS system is quite good at it...probably because
tropo events occur over a much longer period of time...allowing the DX a
chance to propagate through the very busy network. Even then, it is
rare that home-based stations propagate direct over long distances.
They usually "hook up" with a series of Digi's, who are high enough to
take advantage of the inversion.

These factors together have led us to conclude that BEACONet on 2-meters
(on 147.585) will become a "killer" application, only after we have
established a network of Peer-Hubs (our version of TRACEn-N digis). The
plea to establish them will become stronger over the upcoming year.
Until then, 147.585 will remain a meteor mode and vhf rover frequency.

> I asked earlier if there were ANY 53.53 openings recorded
> this year.   I received no response. The logical deduction
> is that there were no packets heard.

You may wish to search the archives on TAPR. You will find several
53.53 catches documented this year. Check the BEACONet website where
the DX records are kept. You'll see "the best one" documented there.

> I've already been warned by the president
> of the coordinating establishment NOT to put a station on there.

Yeah. A point of view that I've never been able to understand...yet,
things are as they are. 1.7MHz split there, 1 MHz split here, 500 khz
split in california, packet on 53.53 in the southeast and voice in the
northwest.

I've stopped trying to understand how the term "coordination" could
possibly apply to their activity...given the continent-wide nature of
the 6-meter band and their parochial point of view. :o)

I'm coordinated for BEACONet on 53.53 in New York...someone puts a voice
repeater up, using 53.53 in the Northwest...my beacon doesn't care, but
the repeater user does. I was coordiated first, but by an entity that
"has no jurisdiction" in his area. Who budges? <giggling> But that's a
topic for another day.

Anyway...if you have an actual interest in BEACONet operation...consider
this experiment: GATE 28.128 AX.25 with 50.450 MHz USB AX.25 @ 1200
baud. We played a little with this during the Perseids. It would make
the narrowband boys happy (there's still a contingent that thinks it's
probable that 6-meters is open at the bottom end of the band and not
at the top end -- again a topic for another day) :o) Anyway...a
BEACONet home at 50.450 might be "Just the Ticket"...and may move more
of our SSB/CW bretheren to our side.

Warmly,
Ev, W2EV

Hi all,

Need to apologize to the group - just got home from work and found my rig
"stuck" in the transmit mode as the computer had "locked up" and needed a
hard reset. Know it was working ok at 1845Z as my 15-minute Snapshot was in
the file but nothing from 1900Z on. Will not run unattended anymore until
(IF) I can figure out what happened. Only running at 25watts so the rig was
warm but not hot - glad I didn't push the power up.

Ed,

You're the only one I see in the Snapshots for today so if the signal is now
gone it was probably me. Sorry for causing a problem.

Bob - KC5DUI - EM26WE

Hi, Bob,

Real glad you caught it before anything burned up. I was
kinda worried that it was your rig because of the
strength of the signal but it could have been one
of the many local national defense agencies off
frequency as well.

All's well that ends well.

73,

Ed

Rendered body type: text/plain
```

```
Hi all,
I have a small discussion with Marc F8BNN (my neightboor, 30 kms South from
me) and as I now have setup a 24/7/365 station PSK 31 on 28.128, we
proposed to me to be active on another HF frequency.
What are your suggestions, so you could have 2 F stations booming to you on
2 different HF bands. Or perhaps switch Marc to another mode on 10m ...
don't really as he prefer, like me, using PSK31.
We're waiting for your feedback and propositions.

P.S: yesterday (02/10/2001) WD4RBX plotted around 1700 UTC with some some
"crumbs" of frame from N2VRJ and W1/PA3EUG.

73, de JP

65. [propnet] Transmit Lock Up

```
From: esack <esack@pacbell.net>
Date: Wed, 03 Oct 2001 02:33:22 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-40008-2001.10.03-04.54.40--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain
```

```
Hi, Bob,

I have had a similar problem but it always
occurs on start up rather than once the
system is running normally.   On occasion
when I first punch in the "Connect to
APRS Server" activity under the "Actions"
tab on the UI-View32 "home" screen the
transmitter will come on and stay on.
(I have also observed the reverse!  The
beacon message is being generated but the
computer does not action the transmit
signal via the Interface module.)

In every case so far in my setup,
closing the UI-View32
application and reopening it and then
```

going through the "Action/Connect to
APRS Server" routine again results in normal
operation and I have never experienced
a transmitter "On" lock up once the
system is operating in normal beacon
transmission mode, as apparently you
did yesterday.

My "intuitive" take on what happens in
my rig is that there is some noise spike
at times in the start up mode which
confuses the system and causes the
transmit signal to either lock on or lock
off - but only on start up in my case.

One wonders if those who are more
familiar with the UI-View32 program and
its interaction with the computer and the
Interface could shed some light here.

We sure don't want to feel like we cannot
leave our beacons unattended.

Ideally, we need a chunk of software which
shuts off the transmit signal to the Interface
if it is on for more than the expected
beacon-transmit time (sort of like the
"watch dog timer" function in microcomputer
terms) but that is probably
asking for a lot at this point.

Alternatively, one could cobble up a
diode detector/timer/relay module
which would shut off the power to the
transceiver if it were on for more than
a certain period, as a fail safe device.

73,

Ed

W3NRG

Rendered body type: text/plain

Hello JP :o)
There is no other HF band with much BEACONet activity right now although
several frequencies are proposed, if we ever have enough interest. If
you are looking to split your operation, I may suggest that one of you
try to get AGWPE functioning and try AX.25 BEACONet on 28.128 USB at
1200 baud. That would be of great value.

It is really good to have you participating! :o)

Rendered body type: text/plain

Ok Ev,
as I know F8BNN is subscribed to this list he will see your answer. I think
it's a good solution to be transmitting at the same time from JN39 in two
different modes (PKS31/AX25). I will discussed about it with Marc.
Here we are having great fun with Beaconet, since I can see that N2VRJ can
now plot me on his map at 7700 kms!
Thanks for your support.

I implemented the "exit program at 23:59, delete .../UI-VIEW32/SAVED/*.BIN
and restart at midnight strategy yesterday, so entries in my list are now
over a midnight to midnight period. The band seems to be still closed this
morning....

Hi all,

Just checked my email and received the 1700Z report from my computer at home and the band must be dead today. Nothing showing after W3NRG last night. I'm now running in the receive only mode during the day since I had the computer lock up yesterday (would have needed a hardware watchdog timer as the computer required a hard reset to bring back to life). Don't know why it decided to lock up after all this time running BEACONet without a problem. I have an old P75 with WIN95 that I need to rejuvenate and think I'll see if I can get PSK31Srv and UIView32 to run smoothly on it. Have probably made too many changes (added a CDRW and USB Scanner plus put a router instead of a hub into the cable modem connection) to my WIN98 machine and it just isn't happy with me any longer. If the WIN95 machine works out, all it will be doing is BEACONet so maybe things will cooperate better.

Still "listening"

Bob - KC5DUI - EM26WE

Nothing heard in NY on ^31 either. A-index = 35, K=4. Good for aurora,
bad for HF. :o) Probably lots of N-S activity, though...and not bad for
southern tier states either. Just conjecture, of course. Jesse is
probably hearing half the world. ;-)

```
Hi all
Interesting propagation today. PSK31 and AX25 combined. If you plot the US
stations on your map you will find that it is almost a straight line from SC.
to CA.

Rich

Rendered body type: text/plain

Hi all,
I am now running on 53.53MHz AX.25. I can no do this 24/7/365. I am in California, [CM87HX]. using a 20 watt Alinco mobile radio, antenna is 25 feet above ground, and is a home made J antenna. I also have a 5 element 6 mtr beam I can hookup, but no time tonight for that, maybe tomorrow I hook that up and point east!
 Is anyone else still doing AX.25 on 6 mtrs?

I also have setup on 28.131 as a lurker and am printing several stations from the east; KC5DUI, KU5W, KC5NFU so far tonight.

Using UI-View32, ver 1.4,   UI-Path, ver 3.6   and PSK31Srv, ver1.08.
Wayne,
KE6AJE

Hi Wayne,
There is 53.53 activity scattered around. Truth be told, it will
probably be a bit sparse until spring (although...you never really
know).

We gotta get you TXing on 28.131, though. :o)

         I've been running on 53.530 24/7 for MONTHS, maybe a year, except
for a deviation over to 50.4 -- something -- back in September.

         Still there,
         Earl

Vive la France..... Jean-Philippe has been coming in strong all morning
long!
I didn't plot him earlier because I have some problems with the scheduled
auto-connect to APRSSERVE, which had my PSK31Srv and UI-View up and running
but UI-View wasn't connected to the APRS (PSK31) server.

Pretty good enhancement going on out here! For the first time EVER, I see a Utah station on my map, and I don't mean southeastern Utah, but actually northwestern Utah, near Salt Lake City!

K7SRB-1>TP3VPY,N7XYR-1,WIDE5*:''R6!qcj/]"BN}
641 miles...

I knew something was up this morning when a station within 50 miles of Los Angeles popped in!

Received my 1700Z email here at work and looks like a GREAT day for 10 meters. Of course, I still have my transmit disabled since the COMPUTER

locked up the ONE time on Tuesday (has worked perfectly ever since but I'm paranoid) so noone is seeing me on their screens. Looks like both coasts and France are within reach! We're expecting thunderstorm tonight/tomorrow so will be "completely" off the air for a couple days.

Bob - KC5DUI - EM26WE

96. [propnet] W1BW status; mid-day catch

From: Bruce Walker <bruce@w1bw.org>
Date: Thu, 04 Oct 2001 13:52:26 +0100
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-40212-2001.10.04-13.17.44--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I am up at a vacation house up in Maine (FN45ub), and when I'm not doing something else with the computer or trying to make QSOs with the radio, I'll try to be on from here.   I just took myself off the air because of problems with some sort of oscillation...probably rf in the audio. My apologies if I have been mucking up the band with bad audio this morning. Will debug later (new ft-847 and antenna here).

My catch from today so far:

2001-October-04 13:41 4 stations

Callsign	Type	Latitude	Longitude	Km	Bearing	Last Heard
W1BW*	Grid Squ.	[FN45UB]		0.0	0	Oct 04 13:20
F5SMZ*	Grid Squ.	[JN39EJ]		5572.6	56	Oct 04 13:23
N2VRJ*	Grid Squ.	[EL86TX]		2275.8	212	Oct 04 13:15
KC5NFU*	Grid Squ.	[EM12RW]		2626.5	248	Oct 04 11:38

Key: '+' = UI-View user   '*' = heard via a digipeater

I also copy F5BNN(?) very clearly, but that station doesn't have CRC generation on.

Very interesting propagation. I got fragments of PA3EUG on psk from about 200miles away "back home", which I never would have expected...I'm on the north slope of a mountain here, and should be out of range for direct, especially with large granite attenuator between us, and too close for skip. Maybe reflection from the mountains to the north of me?

Hello.

Tonight's the WWARA meeting. I have a note to send to the 6 meter
band chairman. Here's what I have for proofreading. Let me
know if I should change anything or remove personal calls.

Thanks,
Bill

ps: http://www.wwara.org

------------ proposed letter follows ----------

Summary of 53.53MHz in Pacific Northwest for BeaconNet Packet
activity.

To.
  Western Washington ARA 6 meter Repeater coordinator
  - Ed Bruette ebruette@silverlink.net
  British Columbia
  - Alan Muir. ve7beu@muircom.com
  Northern Amateur Relay Council of California
  - carlgmrc@jps.net

Hello all.

While I'm not currently a BeaconNet participant, nor do I plan to
be in the near future, I find it to be potentially a very
educational
and informative project. I believe now, before any repeaters are
on the air on 53.53 MHz, would be a good time to recognize the
project
and preserve the frequency.

Below is some notes and communications regarding the project.

73,
Bill WA7NWP

----

Well, "wonderful" day today even it seems that I've transmitted in QPSK
during
2 hours ! (coming back home after work I've discovered "Murphy" my cat
sleeping
on the keyboard with his head on the "F2 key" !!!

Some complementary info:
* W1WB was today the strongest station with a S7! on TX until he stopped
  transmitting at mid-day. Bruce are right, your signals were very strange,
  sounding like RTTY; hope you will solve it easily.
* then W1/PA3EUG, Ramon the more continuous signal received here near
Luxembourg
  and the last heard on the band afer others have disappeared.
* Rick WD4RBX was received in a quite constant manner across the day.
* sporadic and less intense signals of Jesse N2VRJ compared to past days
  when I was receiving you in better conditions, but no signals from the
others.

So, hope these additional info will give you a more constructive feedback of
what really happened here. Now time to go to bed...

73 de Jean-philippe.

----

* The Pacific North West has a non-standard repeater split on
  6 meters. Apparently this was done in the interest of more
  channels and to alleviate extremely difficult to filter mixing
  interference from a Seattle AM radio station operation at 1 MHz.
  The 1 MHz signal was a problem since the repeaters then on 6
Meters
  were using a 1 MHz split.   Repeater Output + 1 MHz AM ==>
Repeater Input.

  This was an ingenious solution to the problem.

----

* This is not APRS - it is similar but goals are different.
Standard
  APRS software will not, in general, work

>From the Web when searching on 53.53 and repeater

  http://www.google.com/search?q=53.53+repeater

****

* Florida: "Motion by Nilo Hernandez that 53.53 MHz be released for
  coordination to FADCA for the use of the Prop Net. Motioned seconded by
  Frank Butler. Motion passed unanimously."
  http://florida-repeaters.org/min0999.htm

****

Various communications received.

****

I just pulled a list of all co-ordinated 6m repeaters in US and
Canada from new TravelPlus CD (ARRL Repeater handbook) - They list 833
6m repeaters total (including some crossband, remote base and simplex
repeaters). Only the one is Surrey, BC is on 53.53. 53.53 is listed
primarily as simplex packet freq in bandplan for area South-eastern
Rrepeater Association co-ordinates. Texas VHF-FM society list 53.53 as
"BeacoNet APRS" so at least one group officially recognizes it. -
Bruce, KD5IUG

... also a note on repeater output/input. If area/region is using
the "standard" (whatever that means on 6m!) -1 MHz offset, the input
would fall 5 KHz from 52.525 - not a good thing! Half a meg split
would be different ball game. - Bruce, KD5IUG

I did as complete of a study of 53.53 MHz prior to landing on it for
BEACONet operation. I also found the VE7 repeater there, and asked
folks in the B.C., Canada area to take a listen for several days. No
activity was heard on the frequency so, I generated a graphic that
shows the usage of the frequency. It's over 100k, but a good gander
if you have a chance. The direct URL is:
http://www.rochesterny.org/BEACONet/images/freqav1.jpg

PropNET/BEACONet is officially coordinated in NY, Florida, Texas and
the Maryland/DC/Va area. There may be more...there isn't a "national
communication structure" in place by which such things are tracked and
communicated, to my knowledge. Packet operation (though not
specifically BEACONet) is coordinated on 53.53 in the South East
Repeater Association bandplan (http://www.sera.org).

Ev, W2EV

I'll have to go digging for the notes. This map is a couple of years
old. You can count on AA2AC (a hub in Buffalo NY) and W2AAA (a hub in
Rochester) as full-time on 53.53. Expect a *lot* more next year. Word
is starting to spread of the BEACONet advantage for contest
rovering...and 53.53 is the ideal frequency for that.

Ev

Ev, Jeff and group - here is snip of the Southeastern Repeater
Association 6m plan from .1 up minus calling freqs.

```
50.100 - 50.600         SSB & AM (500 KHz)
50.400                      AM Calling Frequency
50.600 - 51.000         Experimental/Special Modes (400 KHz)
50.700 -                    TTY Calling Frequency
50.800 - 50.980         Remote Control Model Radio (180 KHz)
51.100 - 52.000         FM Repeaters & Simplex, Voice & Packet/Digital
52.000 - 54.000         FM Repeaters & Simplex Voice & Packet/Digital

PACKET/DIGITAL FM SIMPLEX FREQUENCIES
53.490  53.510  53.530  53.550   53.570  53.590

Such activity... I couldn't let this report go unnoticed. This is my report
as of 15 minutes ago. Lovely conditions !

Rendered body type: text/plain

Hi, Ev and Group,

With today's band opening, I found that every time
I began to try to get a good copy on F5SMZ AND F8BNN
one of the strong East Coast U.S. signals seemed to
get into a roughly similar transmission schedule and walked on
them.

O.K. so, welcome to the wonderful world of ham radio but
one wonders if too many of us have specified approximately
the same time repetitions.

In a well ordered world, I guess W2EV could specify our
retransmit periods (or have us all pull our beacon time repetitions
out of a hat) but that might seem like more organization than
many of us like to see (No?)

How about we agree to all use time repetitions that
are in the form "T.QR" where T is 3, 4 or 5 and
Q and R are integers selected at random??

Or, is there a better way?

Great day!

73,

Ed

W3NRG

I think we already do something like this. I have my beacon interval set to
3.xx (I don't remember what "xx" is, got to check when I get back home.) In
your example, the most important thing is to have variations in the whole
and tenths of the minute between stations in the 4 quadrants of the US and
Europe.

So, yes, if someone can coordinate this, I will be the first one to change
my setup.

                        ||||||
                        Yet another example of how important it is
                        for us to establish Peer-Hubs at altitude.
                        This report got to Earl by way of being
                        digipeated through 5 APRS digipeaters, not
                        direct. Even so, this is an excellent
                        example of what we *could* be able to do
                        using BEACONet protocols (which don't flood
                        a frequency with useless -- to us -- info).

I'd bet that the "band is open", but -- for a number of reasons -- it
slipped by even the most staunch SSB/CW DX hounds. Thanks for sharing,
Earl! :o)

Rendered body type: text/plain

Here's the day's catch from Maine. Backed off to 8 watts transmit in the afternoon because of transmit quality instability. Friday, I'll be active on AX.25 from up here...I guess I'll alternate days, since I can't monitor both simultaneously with the setup I have here. Also, my AX.25 setup will be with AGWPE rather than a standalone TNC.

That's possible, but read on...

> How about we agree to all use time repetitions that
> are in the form "T.QR" where T is 3, 4 or 5 and
> Q and R are integers selected at random??

>From the BEACONet website (http://go.to/BEACONet | Configuration | BEACONet^31):

"Beacon Interval Internet = some number from 3.00 to 5.99 (this assures that there will not be two people transmitting at the same time)."

It is inevitable that three or four BEACONet^31 participants will choose values that are close to each other...but not probable that multiple folks will choose both the same interval time, *and* start the beacon at the same time. Just as orbiting planets sometimes "align", so with BEACONet transmission-times. This won't happen often though.

More often than not, we will be "appropriately" spread out, in the time-domain.

115. [propnet] Beacon Transmission Timing

From: esack <esack@pacbell.net>
Date: Fri, 05 Oct 2001 01:13:31 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-40384-2001.10.05-03.35.09--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi, Ev,

In the various software programs we have
at our disposal such as UI-Path,
there is probably an easy
way of showing the beacon transmission
distribution in time. I'll look at that today.

However, at this QTH, at times of good
band openings, I have seen quite a bit of
"bunching" (i.e. two or three beacons
transmitting in semi-overlapping
fashion followed by long quiet periods.)

To put it simply, the pattern is not as
evenly distributed as one would like.

Could this be happening in part because
a first strong station transmits and delays
the beacons of several other strong stations
via the "delay transmit if locked on a
beacon" function so that the delayed
beacons then transmit at the same time
when the first beacon ends?

73,

Ed

I suppose there are several ways to address this...including: by
"official coordination" and by "good Amateur practice". :o)

"Official Coordination" makes more work for someone, while also creating
a "layer" of politics that someone, sometime will perceive as unfair.

"Good Amateur Practice" (always my favorite <g>) would infer that we
monitor our activity and adjust it ao allow for "maximum usage".

However...your point isn't lost (on me anyway... <smile>). My
calculations below should be understood as a "guestimate by someone who
simply observes, and not someone who is expert in the calculation on the
channel loading of RF-based data networks":

Factors in BEACONet^31 channel loading:
o Within the suggested range, from 3.00 to 5.99 there are 300
  possible "TX intervals" from which to choose.
o a typical BEACONet^31 transmission may take 20-seconds to complete
  (consuming some 1/9th of the available time-slots unto itself)
  - of course, this assumes that everyone is on the same frequency
o at 31 baud, this is a significant amount of congestion (!)
o everyone is not on the same frequency
  - we are actually spread-out over +/- 150 hz from the 1,500 hz
    target (due to the natural differences between tuning accuracy
    between different transceivers?)
  - +/-150 hz = 300 hz worth of "psk31 channels" (9 of them [yes,
    this calculation is a generality, but stick with me for a
    minute])

The result: A typical BEACONet^31 transmission consumes "1/81-th" of
the available channel load (atypical ones (looooong, that is) consume
more. This is why it is important to keep the payload as succinct as
possible (cramming as much info as we can in a short payload).

PSK31srv can miss some transmissions due to scanning in the "wrong end"
of the audio passband when other signals appear. I suppose this is the
rough equivalent to a "hidden transmitter collision" in the AX.25
world. Until there is PSK31srv support for the decoding of multiple,
simultaneous TX-streams, this is something that we have to live with and
find the "most correct" PSK31srv scanning settings to counteract (of
course, with multiple TX-stream decode...our channel loading capacity
mushrooms!).

By the way...Roger built-in a couple of "collision avoidance"
mechanisms:
o scanning (which we are all familiar with)
o DCD (Data Carrier Detect), which will hold-off a TX if there is

another TX already taking place within 50hz (and being received by
the station that wishes to transmit).

I guess I'm suggesting that, for the time being, BEACONet^31 doesn't
have a lot of choice other than to use "Good Amateur Practice" and
observe what is going on...and making a personal choice to spread out
out in both the "time" and "audio frequency" domains where
appropriate...knowing that there will be times of overlap and silence,
but that -- over the long haul -- thise may (the jury is still out) have
little over-all effect.

120. [propnet] UiMailer Important update

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Fri, 5 Oct 2001 10:24:22 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-40431-2001.10.05-12.49.20--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I have dissevered another problem (er, feature) that has crept into my
coding. As I failed to fully read the UI-view help file, thus the reason
for this update. If you take a look at the snapshot files created, you will
find some entries have a '*' attached to the end of a callsign. I was not
quite sure what this was, but made it a real simple way to determine the end
of a callsign. I have since discovered this is actually a flag for a
digipeater. For those of us running AX.25 here lately, you will discover in
the snapshot file there is no indication of a digipeater.

I had a hell of a time trying to figure out why, even though I was seeing EV
and RBX plots on 28.128, I was not getting a correct construct of the email
message.

I have corrected this and version 1.62 will be up on the web site by late
afternoon.

Now for the big question. As we are not doing any digipeating with PSK, why
is the snapshot log and the station list indicating all station being heard
via a digipeater? Could it be because we are sending the info via a TCP/IP
socket, UI-View thinks it actually coming form a digi?

Thank you, Jean-Philippe, for the report.

This is quite a thrill for me as well.

Isn't this amazing. I am transmitting from
an antenna on the forth floor balcony of
a 16 story steel frame building which is surrounded
on all but the Pacific Ocean (West) facing side
with other equally tall steel frame buildings.
(Of course, the signal is not going the long
way around!)

QTH is Coronado, CA which is on a
peninsula off of San Diego, CA.

The power of PSK31 is clearly endorsed
by your reception of my signal.

By the way, I did report seeing you yesterday.

73,

Ed

124. [propnet] Intra-day report

From: "Ramon F. Kolb" <ramon@ieee.org>
Date: Fri, 5 Oct 2001 14:13:40 -0400
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-40439-2001.10.05-13.39.10--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Yet another great day for propagation. JP, congrats on your DX record (for now....) between you and W3NRG.
I checked the logs this morning, and it seems that the path the the east (Europe) opens about an hour before the first north-south contacts take place (11:41 vs 12:53 UTC, or 07:41 and 08:53 EDT). You can also check that in the table at the bottom of my email. Then, later, the west-coast path opens. It looks that I heard W3NRG for the first time at 14:21 UTC, or 10:21 EDT / 07:21 PDT. So for him, the path towards the east opened at about the same (local) time (Boston-Europe started at 07:41 LT (BOS), and California-Boston at 07:21 LT (Cali)).

Interesting.... anyone knows where we can get a MUF map for the current conditions?

Thanks,

        There used to be one available on the web, but it's been several
years since I took a look at it and I don't remember the link. Let me look
around a bit and I'll try to find it again.

tnx Ramon for congratulations,
i was convinced since I decided to join Beaconet that a 24/24 station here
will have an added value for all of us studying propagation mystery and
perhaps disconvering interesting new muf behaviors.
Complete day report comes in 1 hour.

Hi All

First I would like to welcome PP8KWK (AX25). Direct!

I am working the graveyard shift and when I got up this afternoon I checked
my BEACOnet (actually ax25 & pas31) station list and found it quite
intriguing. I then checked the terminal window in an attempt to catch up on
the days activity. I included a small portion of it so you all can see part
of my days catches and W2EV, Evs BEACOnet station at work.

Rendered body type: text/plain

Hi, Ramon,

As I was watching the screen this afternoon,
I saw a good example of how two stations can
get into sync (or close to it) in their BEACONet
cycle. You and I must have been both set to
about the same period (I was at 4.02) and you
were coming on slightly before I was timed to
come on BUT since my receiver was locking

on to your signal, my transmission was alway
delayed until immediately after yours went off.

That went on for the 30 to 45 minutes
I was watching the screen.

If I had not been locking on to you, (i.e. was
not receiving you) we would
both have been transmitting at the same time.

So, "it can happen."

I have changed my period to 3.87 which should
break us up,now.

Or is there some other phenomenon in play here??

73,

Ed

W3NRG

Rendered body type: text/plain

Very well possible.... I think I set mine to 4.16 or something. So that's
really close.....

But since we locked onto eachothers signal, transmissions were delayed. This
will only work when there is no or little fading, and when the signals are
strong.
Unfortunately, UIView allows us only to schedule the transmission interval,
not the BEGINTIME/OFFSET of the minute the transmission starts. So we can't
come up with a scheme like they use for Meteor Scatter. Or am I mistaken?

By the way, I found out that UIView comes with a cool thing to automatically
synchronize your system clock. Add the following to your SCHEDULE using the
schedule editor:
1 minute after you scheduled UIMailer to run (to report us all the latest
results of your experiments), you should add:
RUN INETTIME AUTO

That way the Internet connection is still up and running in most cases (so
you don't hear an auto-dialup). And since you run this once a day, time
drift of your clock is almost non existent. Cool, huh?

--Ramon W1/PA3EUG, Boston, MA, USA [FN42KI]
Join BEACONet^31 at 28.131! See http://go.to/BEACONet

Attached the 5 PM EDT (21:00 UTC) list of results. Band was open LATE in
Europe. 8:30 PM UTC is 10.30 PM France time.... Is there any way to get
UIMailer to talk 24-hour format? Makes sense, especially for UTC...

Since my next trip is getting closer, I am sending you guys my travel
schedule. Since things always tend to change at the last minute, I could
stay on longer or be back earlier, but this should be a good guideline of
when I'll be on and off the air:

- Leave Tuesday afternoon Oct 9, return Saturday afternoon, Oct 13 (to
Sweden)
- Leave Saturday evening Oct 19, return Friday afternoon Oct 26 (to Denmark,
Germany, Czech Rep.)

73s,

Hi, Ramon,

I don't have to worry about fading with your
signal. When the band is open to the East
Coast, you come in here like a freight train!

Since the next transmission time clock
probably starts running when a station's
transmission starts, I can see how two
stations with about the same period
set can keep "quasi-locked" together for
a long period of time, as we were.

Thanks for the suggestion about schedule

setting.

I understand that you will be travelling.
Have a good trip.

73,

Ed
